PREFACE	xi
CONTENTS OF OTHER VOLUMES	xiii

## Chapter 1 Properties of Dielectric Materials

*G. W. Chantry*

I. Introduction	1
II. The Macroscopic Theory	5
III. The Microscopic Theory	21
IV. Experimental Methods	26
V. Some Illustrative Examples of Submillimeter Dielectric Measurements	30
References	47

## Chapter 2 Far-Infrared Spectroscopy on High Polymers

*W. F. X. Frank and U. Leute*

I. Introduction	51
II. High Polymers	52
III. Dispersion Relations	55
IV. Applications	57
V. Conclusion	68
References	69

## Chapter 3 Submillimeter Solid-State Physics

*S. Perkowitz*

I. Introduction	71
II. Survey of Experimental Methods	72
III. Submillimeter Semiconductor Physics	75
IV. Submillimeter Superconductor Physics	96
V. Submillimeter Semiconductor Characterization	112
VI. Summary: Recent Work and Future Projections	120
References	122

## Chapter 4 Review of the Theory of Infrared and Far-Infrared Free-Carrier Behavior in Semiconductors

*B. Jensen*

I. Introduction	127
II. Theoretical Results	129
III. Polar Scattering	132
IV. Formulation in Terms of a Cross Section	134
V. Formulation in Terms of a Relaxation Time	137
VI. Impurity Scattering	138
VII. Impurity Scattering at High Concentrations and Low Temperatures	142
VIII. Comparison with Experimental Results	147
Appendix A. Theory	160
Appendix B. Summary of Theoretical Results	165
Appendix C. The Angle Averaged Matrix Element for Polar Scattering	168
Appendix D. Angle-Averaged Matrix Element for Impurity Scattering	169
References	171

## Chapter 5 Review of Recent Improvements in Pyroelectric Detectors

*A. Hadni*

I. Introduction	173
II. Epitaxial Face-Electrode Detectors	179
III. Edge-Electrode Detectors	186
IV. New Ferroelectrics	203
V. Better Use of Pyroelectric Materials	204
VI. Comparison with Quantum Detectors	207
VII. Conclusion	210
References	210

## Chapter 6 Cyclotron and Zeeman Transitions in Photoexcited Semiconductors at Far Infrared

*T. Ohyama and E. Otsuka*

I. Introduction	214
II. Experimental Arrangements	215
III. Hot Carrier Experiments in InSb	223
IV. Carrier Dynamics in GaAs	243
V. Exciton Dynamics in Si	258
VI. Concluding Remarks	274
References	276

<b>Chapter 7 High-Temperature Infrared Reflectivity Spectroscopy by Scanning Interferometry</b>	
<i>F. Gervais</i>	
I. Introduction	280
II. Interaction of Infrared Electromagnetic Field and Crystalline Solids	284
III. Phonon Self-Energy, Theory and Practice	288
IV. Dielectric Function Models	297
V. Reflectivity Spectroscopy with a Scanning Interferometer	309
VI. Examples of Applications	321
References	335
<b>Chapter 8 Millimeter and Submillimeter Waves Interacting with Giant Atoms (Rydberg States)</b>	
<i>P. Goy</i>	
I. Introduction	342
II. One-Electron Rydberg Atoms	344
III. Experimental Aspects	350
IV. Millimeter Spectroscopy in Rydberg States of Sodium and Cesium	361
V. Blackbody Detection	367
VI. The Rydberg Maser	372
References	386
<b>Chapter 9 Far-Infrared Spectroscopy of InAs–GaSb Layered Structures</b>	
<i>J. C. Maan</i>	
I. Introduction	387
II. InAs–GaSb Superlattices	389
III. Experimental Results of InAs–GaSb Superlattices	398
IV. The InAs–GaSb Heterojunction	414
V. Summary and Conclusions	424
References	425
INDEX	427
