

CONTENTS

NOTATION	xiii
1 INTRODUCTION	1
Objectives. Sources of information. Units. Notation. Methods of analysis. Flow patterns and transition models. References and further reading. Problems.	
2 THE BASIC MODELS	34
Introduction. Basic equations of two-phase flow. The homogeneous model. The separated flow model. Correlations for use with the homogeneous or separated flow models. Two-phase flow in inclined pipes. The influence of imposed heat flux on the void fraction and pressure gradient. References and further reading. Example. Problems.	
3 EMPIRICAL TREATMENTS OF TWO-PHASE FLOW	84
Introduction. The drift flux model. Bubbly flow. Slug flow. Annular flow. Wispy-annular flow. Chenoweth and Martin (1955) correlation for large-bore pipes. Pressure losses through enlargements, contractions, orifices, bends, and valves. Conclusions. References and further reading. Examples. Problems.	
4 INTRODUCTION TO POOL AND CONVECTIVE BOILING	131
Introduction. Elementary thermodynamics of vapour/liquid systems. The basic processes of boiling. Pool boiling. Convective boiling. References and further reading. Example. Problems.	
5 SUBCOOLED BOILING HEAT TRANSFER	183
Introduction. Single-phase liquid heat transfer. The onset of subcooled nucleate boiling. Partial subcooled boiling. Fully developed subcooled boiling. References and further reading. Examples. Problems.	
6 VOID FRACTION AND PRESSURE DROP IN SUBCOOLED BOILING	220
Introduction. Void fraction in subcooled boiling. Pressure drop in subcooled boiling. References and further reading. Examples. Problems.	
7 SATURATED BOILING HEAT TRANSFER	249
Introduction. Saturated forced convective boiling in a round tube. Suppression of saturated nucleate boiling. The two-phase forced convective region. Heat transfer in areas where the critical heat flux has been	

	exceeded. Boiling on tube bundles. References and further reading. Example. Problems.	
8	CRITICAL HEAT FLUX IN FORCED CONVECTIVE FLOW—1. VERTICAL UNIFORMLY HEATED TUBES	325
	Introduction. Critical heat flux for forced convective flow of water in circular conduits with uniform heat flux. Important second order effects on the critical heat flux. References and further reading. Example. Problems.	
9	CRITICAL HEAT FLUX IN FORCED CONVECTIVE FLOW—2. MORE COMPLEX SITUATIONS	375
	Introduction. The critical heat flux in round tubes with non-uniform heating. The critical heat flux in non-circular geometries. Critical heat flux in forced flow of fluids other than water. Critical heat fluxes for the case where there is a liquid–vapour mixture at the channel inlet. Critical heat flux under dynamic conditions. The mechanism of the critical heat flux condition. Critical heat flux for boiling on horizontal tube bundles. References and further reading. Examples. Problems.	
10	CONDENSATION	430
	Introduction. The basic processes of condensation. The mechanism of evaporation and condensation at a plane liquid–vapour interface. Film condensation on a planar surface. The influence of interfacial shear. Drop-wise condensation. Pressure gradient in condensing systems. References and further reading. Example. Problems.	
11	CONDITIONS INFLUENCING THE PERFORMANCE OF BOILING AND CONDENSING SYSTEMS	488
	Introduction. Methods of improving the heat transfer coefficient in nucleate boiling. Methods of improving the heat transfer coefficient in condensation. Conditions influencing the critical heat flux in forced convective boiling. The design of boiling systems where heat flux is a dependent variable. Deposition and corrosion on boiling surfaces. References and further reading. Problems.	
12	MULTI-COMPONENT BOILING AND CONDENSATION	535
	Introduction. Elementary phase equilibria. Nucleation in a binary system. Size of nucleation sites. Bubble growth in a binary system. Pool boiling. Forced convective boiling. Simplified treatment for binary and multi-component evaporation and condensation. References and further reading. Problems.	
	APPENDIX	585
	Table A1. Conversion factors.	
	Table A2. Viscosity of steam.	
	Table A3. Steam tables.	
	Table A4. Physical properties of refrigerants.	
	INDEX	591
