The General Perturbational Theory of Space-Harmonic Traveling-Wave Electron Interaction

W. G. Dow

I. Introduction	1
II. Self and Mutual Beam-Circuit Capacitances, and Beam-Circuit Coupling Coefficients	3
III. The Electrokinetic Bunching Equations	5
IV. The Circuit Equations	9
V. Complex Exponential Notation for Beam and Circuit Variable	14
VI. Voltage-Ratio Beam-Circuit Coupling Coefficient ξ_v for a Spatially Periodic Structure	17
VII. Beam-Circuit Self-Capacitance C_q Governing the Space-Charge Voltage	29
VIII. Charge-Ratio and Voltage-Ratio Beam-Circuit Coupling Coeffi- cients	42
IX. The Space-Harmonic Interaction Characteristic Equation	45
X. The Gain, Space-Charge, and Circuit Loss Parameters	53
XI. Normalization Relative to the Gain Parameter C_α	60
XII. Expressions for Growing-Wave Hot-Circuit Gain and Cold- Circuit Loss in Terms of Tube Length	66
XIII. The First-Order Quartics for Propagation-Constant Perturbation Due to Space-Harmonic Interaction	68
XIV. Graphical Study of the Perturbational Quartic Equation	70
XV. The Quartic for Drive of the Forward Total Wave	76
XVI. Frequency Offset Effects; Reduction to Cubic	79
XVII. The Nearly-Cubic Quartic, for Zero Values of Frequency Offset, Loss, and Space Charge	84
XVIII. The Electrokinetic Boundary Conditions at Electron Entrance into the <i>rf</i> Field	87
XIX. The Electromagnetic Conditions at Electron Entrance to and Exit from <i>rf</i> Field	93
XX. Relative Amplitudes of the Four Perturbed Waves; Voltage Gain	95
XXI. Phasor Representation of Backward-Wave Gain-Producing Inter- ference	105
XXII. Backward-Wave Gain Evaluation	109
XXIII. The Start-Oscillation Conditions	112
XXIV. Start-Oscillation Current and Device Length; Voltage Tun- ability; Gain Bandwidth Product	120
XXV. Concluding Comments	121
References	123

Thermionic Energy Conversion

J. M. HOUSTON AND H. F. WEBSTER

I. Introduction	125
II. Idealized Model of a Thermionic Converter	130
III. The Work Function of Various Surfaces	142
IV. Vacuum Thermionic Energy Converters	154
V. Cesium Thermionic Energy Converters	169
VI. Devices Using Auxiliary Discharges	193
VII. Devices Using Fission Fragments for Ion Production	195
VIII. Applications of Thermionic Converters	195
IX. Summary and Future Trends	199
References	201

Thermoelectricity

FRANK E. JAUMOT, JR.

I. Introduction	207
II. Basic Considerations	208
III. Materials	215
IV. Practical Considerations	220
V. Thermoelectric Applications	233
VI. Theory and Problems	235
References	242

Impact Evaporation and Thin Film Growth in a Glow Discharge

ERIC KAY

I. Introduction	245
II. Emission of Charged Particles from Metal Surfaces by Energetic Particles	247
III. High Vacuum Impact Evaporation (Cathode Sputtering)	257
IV. Glow Discharge Characteristics	284
V. Nucleation and Film Growth in High Vacuum Environment	289
VI. Film Growth in Glow Discharge Environment	297
VII. Reactive Impact Evaporation	311
References	317

Ultrahigh Vacuum

P. A. REDHEAD, J. P. HOBSON, E. V. KORNELSEN

I. Introduction	323
II. Physical Processes	325
III. Technology of Ultrahigh Vacuum	371
IV. Applications	417
References	422
AUTHOR INDEX	433
SUBJECT INDEX	445
