Chapter 1. Introduction	1
References	2
Chapter 2. Instrumental Methods of Electron Spectrometry and Methods of Electron Detection	3
1. Introduction	3
1.1. Basic Formulas in Electron Spectrometry,	3
1.2. Nomenclature,	4
1.2.1. <i>Single or Limited Sources and Detectors,</i>	4
1.2.2. <i>Extended Sources and Detectors,</i>	5
2. Magnetic Spectrometers,	6
2.1. Uniform Magnetic Field Spectrometers,	6
2.1.1. <i>Figures of Merit of the Semicircular Spectrometer,</i>	9
2.1.2. <i>Special Applications of Postacceleration Techniques,</i>	9
2.1.3. <i>Other Uniform Field Spectrometers,</i>	9
2.2. The Double-Focusing Spectrometers,	12
2.2.1. <i>Iron-Core $\pi\sqrt{2}$ Spectrometer,</i>	13
2.2.2. <i>Iron-Free $\pi\sqrt{2}$ Spectrometer,</i>	14
2.2.3. <i>Other Iron-Free Double-Focusing Instruments,</i>	15
2.3. Methods for Increasing the Luminosity and the Information for a Given Resolution,	15
2.3.1. <i>Multistrip Sources,</i>	15
2.3.2. <i>Field Correction,</i>	16
2.3.3. <i>Multidetector Systems,</i>	17
*3. Electrostatic Analyzers,	17
*3.1. Retarding Field Analyzers,	17
*3.2. Electrostatic Deflection Analyzers,	18
*3.2.1. <i>Four Types of Deflection Analyzers,</i>	19
*3.2.2. <i>Analyzer Transmission Function without Aberrations,</i>	23
*3.2.3. <i>Analyzer Transmission Function with Aberrations,</i>	24
*3.2.4. <i>Optimizing the Analyzer,</i>	26

- *3.2.5. *Measurements of Cross Sections' Differential in Energy*, 28
- *3.2.6. *Direct Energy Reading Analyzers*, 29
- *3.2.7. *Effect of Sweep Speed on a System with a Time Constant*, 30
- *4 Magnetic Field Annulment, 32
- 5 Electron Energy Analysis in Electron Microscopy, 34
 - 5.1. Retarding Field Analyzers, 34
 - 5.2. The Möllenstedt Analyzer, 35
 - 5.3. Superimposed Electrostatic and Magnetic Field Analyzers, 35
 - 5.3.1. *Wien Filter*, 35
 - 5.3.2. *Antiparallel Field Analyzers*, 37
- 6. Electron Detection Devices, 37
 - 6.1. Gaseous Ionization Counters, 38
 - 6.1.1. *Counter Windows*, 38
 - 6.1.2. *Pre- and Postacceleration Techniques and Position Sensitive Detection*, 39
 - 6.2. Semiconductor Detectors, 40
 - 6.3. Scintillation Counters, 41
 - 6.4. Continuous-Channel Detectors, 41
 - 6.5. Photographic Electron Detection, 42
 - 6.5.1. *Integral Method*, 42
 - 6.5.2. *Differential Method*, 43
- References, 44

Chapter 3. The Auger, Coster–Kronig, and Autoionization Effects

51

- 1. Introduction, 51
- 2. Sources of Auger Electrons, 52
 - 2.1. Orbital Electron Capture and/or Internal Conversion in a Radioactive Element, 52
 - 2.2. The Photoelectric Effect, 52
 - 2.3. Electron Bombardment, 53
 - 2.4. Ion Bombardment, 53
- 3. Classification, 53
 - 3.1. Pure L – S Coupling, 54
 - 3.2. Intermediate Coupling, 55
- 4. The K -Auger Series, 56
 - 4.1. The KLL -Auger Group, 56
 - 4.1.1. *Energies of KLL -Auger Electrons*, 56
 - 4.1.2. *KLL -Auger Line Intensities*, 69
 - 4.1.3. *Atomic and Molecular Effects on KLL -Auger Spectra*, 91
 - 4.2. The KLM -Auger Group, 97
 - 4.2.1. *Energies of KLM -Auger Electrons*, 97
 - 4.2.2. *Relative Intensities of the KLM -Auger Lines*, 102
 - 4.3. Other K -Series Groups, 102
- 5. Other Auger Series and Coster–Kronig Transitions, 105
 - 5.1. Theoretical Transition Energies and Probabilities of L - and M -Auger Transitions, 107
 - 5.1.1. *L -Auger Transition Energies*, 107
 - 5.1.2. *L -Auger Transition Probabilities*, 109
 - 5.1.3. *M -Auger Transition Energies and Probabilities*, 110

- 5.2. Coster–Kronig Transitions, 110
 - 5.2.1. *L- and M-Coster–Kronig Transition Energies*, 111
- 5.3. *L- and M-Auger Investigations*, 117
 - 5.3.1. *The L- and M-Auger Groups Arising from the Decay of Thorium B (^{212}Pb), Radium B (^{214}Pb), and Radium D (^{210}Pb)*, 117
 - 5.3.2. *L- and M-Auger Groups for Other Elements*, 121
6. Autoionization, 129
 - 6.1. The Nature of Atomic Autoionizing Levels, 130
 - 6.2. Classification of Autoionizing Levels, 136
 - 6.3. Excitation, Decay, and Study of Autoionizing Atomic Levels, 139
 - 6.3.1. *Photoabsorption*, 140
 - 6.3.2. *Inelastic Electron Scattering*, 141
 - 6.3.3. *Electron Emission in Autoionizing Level De-Excitation*, 144
 - 6.3.4. *Elastic Electron Scattering*, 153
7. The Angular Distribution of Auger Electrons, 155
8. Fluorescence Yields, 155
 - 8.1. The *K*-Shell Fluorescence Yields, 156
 - 8.2. The *L*-Shell Fluorescence Yields, 158
 - 8.3. The *M*-Shell Fluorescence Yields, 160
 - 8.4. Primary Vacancy Creation, 160
 - 8.4.1. *Photoelectric Ionization*, 160
 - 8.4.2. *Ionization by Electron and Heavy Charged Particle Impact*, 161
 - 8.4.3. *Ionization by Internal Conversion or Electron Capture*, 161
 - 8.5. *K*-Shell Vacancy Shifts to Other Major Shells, 161
9. Secondary Effects Associated with the Auger Process, 162
 - 9.1. Simultaneous X-Ray and Auger Electron Emission, 164
 - 9.2. Cross-Auger Transitions, 164
 - 9.3. Questionable Origin of Electron Lines at ~ 450 eV Emitted in $\text{Ar}^+ - \text{Ar}$ Collisions, 164
10. Nuclear, Atomic, and Other Applications of the Auger Effect, 164
 - 10.1. *K*-Capture Probabilities, 165
 - 10.2. Determination of Relative *L*- to *K*-Capture Probabilities, 165
 - 10.3. Relative Probabilities of *K*-Capture and Positron Emission, 165
 - 10.4. Electron Energy Calibration, 165
 - 10.5. *K*-Conversion Coefficient Determination, 165
 - 10.6. Determination of a Low Energy *K*-Conversion Line Intensity, 165
 - 10.7. Nuclear Level Lifetime Determinations Using Coincidence Techniques, 165
 - 10.8. Determination of Electron Shake-Off Probabilities During Alpha-Decay, 165
 - 10.9. Determination of the Probability of Electron Shake-Off Resulting from *K*-Shell Photoionization in Neon, 165
 - 10.10. Determination of Electron Impact Ionization Cross Sections of Inner Atomic Levels, 166
 - 10.11. Intensity Standard for the Investigation of Chemical Effects on Internal Conversion, 166
 - 10.12. Study of the Interaction of Noble Gas Ions with Solid Surfaces, 166
 - 10.13. Auger Processes Involving Valence Band Electrons, 166
 - 10.14. Band-to-Band Auger Recombination in Semiconductors, 167
 - 10.15. Intraband Auger Transitions, 167
 - 10.16. Auger Recombination of Excitons Bound to Neutral Donors, 167

10.17. Two-Electron Luminescence Decay of Exciton-Neutral Donor and Other Complexes, 167	
10.18. Determination of Surface Structure and Thin Layer Thicknesses, 167	
10.19. Autoionization Involving $^2P_{1/2} \rightarrow ^2P_{3/2}$ Transitions in Excited Rare Gases, 167	
10.20. Auger Resonance Interference Analog in Raman Scattering for One- and Two-Phonon States, 168	
10.21. Determination of Inner Shell Binding Energies from Auger Energies, 168	
References, 168	
Chapter 4. Internal Conversion	179
1. Introduction, 179	
2. General Considerations, 179	
3. Theoretical Calculations of Internal Conversion Coefficients, 180	
3.1. Screening Functions, 184	
4. Internal Conversion Electron Line Analysis, 187	
5. Effects of Electron Density Near the Nucleus, 187	
5.1. Influence on the Isomer Shift, 187	
5.2. Influence on Internal Conversion, 188	
5.2.1. <i>Internal Conversion Probabilities</i> , 188	
5.2.2. <i>Conversion Line Measurements</i> , 192	
References, 192	
Chapter 5. Consequences and Applications of Atomic Recoil after Alpha-Decay	195
1. Introduction, 195	
2. Post-Alpha-Decay Atomic Recoil, 197	
2.1. Atomic Recoil into Solid Media, 197	
2.2. Alpha-Decay Atomic Recoil Effects on Internal Conversion Lines, 198	
2.2.1. <i>Stopping Foil Methods</i> , 199	
2.2.2. <i>Electron Optical Method</i> , 202	
2.2.3. <i>High Resolution Electrostatic Field Methods</i> , 202	
3. Charge States of Recoil Atoms after Alpha-Decay, 211	
3.1. Charge States of Recoil Atoms following Alpha-Decay, 211	
3.2. Complex Structure of Internal Conversion Lines due to Atomic Ionization, 213	
3.3. Effect of High Ionization State on Low Energy Nuclear Transitions, 218	
References, 218	
Chapter 6. Natural Widths of Atomic Levels	220
1. Introduction, 220	
2. X-Ray Emission and Absorption Spectra, 221	
3. Photo electron, Internal Conversion, and Auger Electron Lines, 224	
4. The Atomic Level Widths, 227	
4.1. X-Ray, Auger and Coster-Kronig Transition Probabilities, 231	
4.2. Chemical and Lattice Effects on Level Widths, 236	
4.3. Effects of Multiple Ionization, 237	
4.4. Effects Due to Coupling Between Atomic Electrons and the Nucleus, 238	
4.5. Effects of Thermal Motion, 238	
References, 239	

Chapter 7. Atomic Electron Binding Energies	242
1. Introduction, 242	
2. Theoretical Calculation of Atomic Electron Binding Energies, 242	
3. Experimental Determination of Atomic Electron Binding Energies, 249	
3.1. X-Ray Emission and Absorption, 250	
3.1.1. <i>X-Ray Emission</i> , 250	
3.1.2. <i>X-Ray Absorption</i> , 251	
3.2. Photoelectron Measurements, 252	
3.2.1. <i>Spectrometer and Converter Work Function Considerations</i> , 252	
3.2.2. <i>Photoelectron Line Position Determination</i> , 255	
3.2.3. <i>Photoelectron Line Energy Determination</i> , 256	
3.2.4. <i>Low Energy Photoelectron Measurements</i> , 257	
3.3. Internal Conversion Electron Measurements, 258	
3.4. Auger Electron Measurements, 259	
3.5. Autoionizing Level Measurements, 260	
3.6. Inelastic Electron Scattering Measurements, 260	
3.6.1. <i>Measurements in Solids</i> , 260	
3.6.2. <i>Measurements in Gases</i> , 261	
4. Alterations of Electron Binding Energy Values, 261	
4.1. Atomic Screening of the Nuclear Charge, 262	
4.1.1. <i>X-Ray Absorption and Emission Energy Dependences on the Atomic Valence State</i> , 264	
4.1.2. <i>Photoelectron Energy Dependences on the Atomic Valence State</i> , 267	
4.2. Other Electron Binding Energy Alteration Effects, 270	
4.2.1. <i>Complex Structure of $K\alpha$ K-Ray Lines due to Excitation States in Solids</i> , 270	
4.2.2. <i>External Electric Field Effects on Inner Electron Shells</i> , 270	
References, 272	
Chapter 8. Electron Energy Losses by Scattering in Solids	278
1. Introduction, 278	
2. Plasma Excitations, 278	
2.1. Volume Excitations, 278	
2.1.1. <i>Dispersion Relation</i> , 278	
2.1.2. <i>The Cut-Off Wave Number</i> , 279	
2.1.3. <i>Angular Dependence of Loss Probability</i> , 280	
2.1.4. <i>Free Path Length</i> , 281	
2.1.5. <i>Volume Plasma Loss Half-Width</i> , 281	
2.2. The Dielectric Theory Treatment of Characteristic Energy Losses, 282	
2.2.1. <i>Determination of $\text{Re}(\epsilon)$ and $\text{Im}(\epsilon)$ from Optical Data</i> , 283	
2.2.2. <i>Volume Plasma Loss Energy Dependence on the Target Density</i> , 284	
2.2.3. <i>Differential Free Path for Inelastic Electron Scattering</i> , 284	
2.3. Surface Excitations, 284	
2.3.1. <i>Total Electron Scattering Probability by Thin Films</i> , 285	
2.3.2. <i>Surface Excitations in Multilayer Films</i> , 290	
2.3.3. <i>Dependence of the Dispersion Relation on Film Thickness</i> , 291	
2.4. Polarization Wave Excitations, 291	

3.	Single-Electron Excitations, 292	
3.1.	Exciton Creation and Intra- and Interband Transitions, 293	
3.1.1.	<i>Intraband Transitions</i> , 294	
3.1.2.	<i>Interband Transitions</i> , 294	
3.2.	Electron Energy Losses in Solids, 295	
3.2.1.	<i>Conductors</i> , 295	
3.2.2.	<i>Semiconductors</i> , 302	
3.2.3.	<i>Alkali Halides</i> , 305	
3.2.4.	<i>Solidified Rare Gases</i> , 306	
3.2.5.	<i>Ionization of Atomic Levels by Electron Impact</i> , 306	
4.	Photon Emission from Electron-Bombarded Foils, 307	
5.	Bombardment-Electron and Crystal-Lattice Interactions, 308	
5.1.	Elastic Energy Loss of Crystal Scattered Electrons, 308	
5.2.	Vibrational Excitation of the $(\text{NH}_4)^+$ Radical in Crystalline NH_4Cl , 309	
5.3.	Impact Electron Interactions With a Crystal Lattice, 310	
5.4.	Electron Energy Gains, 313	
5.5.	Diffuse Streak Patterns in Electron Diffraction Patterns, 314	
6.	Multiple Energy Losses in Solids, 314	
7.	Electron Energy Losses As a Secondary Effect in Electron Spectrometry, 315	
	References, 317
