CONTENTS

1	**Introduction**	**1**
1.1	Computer and Computer Simulation	1
1.2	Dynamical Systems of Many Degrees of Freedom	7
1.3	Particle Simulation and Finite-Size Particles	13
1.4	Limitations on Simulation—Future Directions	21
1.5	Hierarchical Nature and Simulation Methods	28
2	**Finite Size Particle Method**	**37**
2.1	Gridless Theory of a Finite-Size Particle System	38
2.2	Dispersion Relation	41
2.3	Collisional Effects Due to Finite-Size Particles	43
2.4	Fluctuations	46
3	**Time Integration**	**51**
3.1	Euler's First-Order Scheme	53
3.2	Leapfrog Scheme	54
3.3	Biasing Scheme	57
3.4	Runge-Kutta Method	64
3.5	Diffusion Equation	68
4	**Grid Method**	**74**
4.1	Grid Method and the Dipole Expansion	74
4.2	Area Weighting Scheme	78
4.3	Examples of Electrostatic Codes	81
4.4	Spatially Periodic Systems	83
4.5	Consequences of the Grid for the Vlasov Theory of Plasmas	88
4.6	Smoother Grid Assignment	95

5	**Electromagnetic Model**		**105**
	5.1	Electromagnetic Particle Simulation Code	105
	5.2	Analogy Between Electrodynamics and General Relativity	108
	5.3	Absorbing Boundary for the Electromagnetic Model	109
	5.4	Magnetoinductive Particle Model	113
	5.5	Method of Relaxation	119
	5.6	Hyperbolic, Parabolic, and Elliptic Equations	121
	5.7	Classification of Second-Order P.D.E.	126
6	**Magnetohydrodynamic Model of Plasmas**		**136**
	6.1	Difficulty with the Advective Term	142
	6.2	Lax Scheme	143
	6.3	Lax-Wendroff Scheme	145
	6.4	Leapfrog Scheme	148
	6.5	Flux-Corrected Transport Method	149
	6.6	Magnetohydrodynamic Particle Model	152
	6.7	Reduced Magnetohydrodynamic Equations	161
	6.8	Spectral Method	165
	6.9	Semi-Implicit Method	173
	6.10	Upwind Differencing	177
	6.11	Discussion of Various Methods	176
7	**Guiding-Center Method**		**189**
	7.1	**E x B** Drift	190
	7.2	Guiding-Center Model	191
	7.3	Numerical Methods for Guiding-Center Plasmas	194
	7.4	Polarization Drift	200
	7.5	Geostrophic Flows	202
	7.6	Finite Larmor Radius Effects	205
	7.7	Gyrokinetic Model	207
	7.8	Guiding-Center Magnetoinductive Model	215
8	**Hybrid Models of Plasmas**		**227**
	8.1	Quasineutral Electrostatic Model	227
	8.2	Quasineutral Electromagnetic Model	229
	8.3	Particle Electron-Fluid Ion Model	233
9	**Implicit Particle Codes**		**238**
	9.1	First Order Accurate Methods	240
	9.2	Implicit Time Filtering	241
	9.3	Decentered Lorentz Pusher	245
	9.4	Techniques for Direct Implicit Advancing	246

9.5 Direct Implicit Electromagnetic Algorithm 248
9.6 Gyrokinetic Model (Revisited) 254
9.7 Large Time Scale–Large Spatial Scale Simulation 258

10 Geometry **268**
10.1 MHD Particle Code 270
10.2 Toroidal Corrections 281
10.3 Electrostatic Particle Code 283
10.4 Method of Flux Coordinates 290

11 Information and Computation **298**
11.1 The Future of Computers 298
11.2 Computation on a Cellular Automaton 303
11.3 Information Processing 308
11.4 Information and Entropy 314
11.5 Correlation Analysis and Maximum Entropy 322

12 Interaction Between Radiation and a Plasma **333**
12.1 Radiation from Particle Beams 334
12.2 Laser Plasma Accelerators 337
12.3 Ion Cyclotron Resonance Heating of a Plasma 356

13 Drift Waves and Plasma Turbulence **367**
13.1 Drift Wave Instabilities 369
13.2 Shear Flow Instability 385
13.3 Heat Convection Instability 390

14 Magnetic Reconnection **405**
14.1 Collisionless Tearing Instabilities 409
14.2 Linear Theory of Driven Reconnection 415
14.3 Fast Reconnection 419
14.4 Coalescence Instability 423
14.5 Theory of Explosive Coalescence and Comparison with Simulation 431
14.6 Current Loop Coalescence Model of Solar Flares 442
14.7 Reconnection-Driven Oscillations in Dwarf Nova Disks 448

15 Transport **457**
15.1 Monte-Carlo Method 458
15.2 Fokker-Planck Model 459

15.3 Particle Transport for Energetic Particles 463
15.4 Mapping Methods 469

Epilogue: Numerical Laboratory **486**

Subject Index **488**

Author Index **494**
