Preface	xi
Chapter 1 High-Power Microwave Electronics: A Survey of Achievements and Opportunities <i>by</i> V. L. Granatstein and A. V. Gaponov- Grekhov	1
1.1 Introduction	1
1.2 The Gap in the Electromagnetic Spectrum at Millimeter and Submillimeter Wavelengths	2
1.3 A Brief History of Microwave Vacuum Electronics (to 1960)	4
1.4 Relativistic Microwave Electronics and New Advances in High-Power Microwave Capabilities	7
1.4.1 Microwave Generation Based on Induced Bremsstrahlung	8
1.4.2 Microwave Generators Using the Doppler Effect for Frequency Upconversion	12
1.4.3 Coherent Microwave Generation Using Intense Relativistic Electron Beams	14
1.5 Applications of Relativistic Microwave Electronics	16
1.5.1 Electron Cyclotron Resonance Plasma Heating and Current Drive in Controlled Thermonuclear Fusion Reactors	16
1.5.2 Microwave Discharge in Gases	17
1.5.3 Enhanced Radar Systems	18
1.5.4 Measurement and Modification of the Atmosphere	19
1.5.5 Advanced Accelerators for High-Energy Physics Research	20
1.5.6 Industrial Processing of Materials	21
References	22
Chapter 2 Principles and Capabilities of High-Power Microwave Generators <i>by</i> G. S. Nusinovich, T. M. Antonsen, Jr., V. L. Bratman, and N. S. Ginzburg	25

2.1	Principles of Operation	25
2.1.1	Electron Radiation and Classes of Microwave Tubes	25
2.1.2	Synchronism	29
2.1.3	Electron Bunching	31
2.1.4	Power Limits	32
2.1.5	Regimes of Operation: Oscillators and Amplifiers	33
2.1.6	High-Frequency Relativistic Electronics: Frequency Increase and Power Escalation	35
2.2	Microwave Sources Based on Coherent Cherenkov and Transition Radiation of Electrons	35
2.2.1	O-Type Cherenkov Devices	35
2.2.2	Klystrons	47
2.2.3	M-Type Devices	53
2.3	Microwave Sources Based on Coherent Bremsstrahlung Radiation of Electrons	62
2.3.1	Cyclotron Resonance Masers (Gyrodevices)	62
2.3.2	Free-Electron Lasers	85
2.3.3	Vircators	97
2.4	Conclusion	100
	Acknowledgments	101
	References	101
Chapter 3	Electron-Cyclotron Resonance Plasma Heating and Current Drive in Toroidal Devices <i>by V. V. Alikaev and E. V. Suvorov</i>	111
3.1	Introduction	111
3.2	General Remarks on Electron–RF Field Interaction Under ECR Conditions	114
3.3	Linear Cyclotron Absorption of Electromagnetic Waves in a Magnetized Plasma	119
3.4	Quasilinear Effects in a Plasma Irradiated by Microwaves—Heating and Current Drive	125
3.5	Experiments on ECR Heating and Current Drive in Toroidal Plasmas	133
3.6	Theory and Experiment on ECR Heating by Intense RF Fields	138
3.7	Conclusions	141
	References	142
Chapter 4	Freely Localized Gas Discharge in Microwave Beams <i>by A. G. Litvak</i>	145
4.1	Introduction	145
4.2	Nonequilibrium Self-Sustained Microwave Discharge in a Focused Wave Beam	147
4.3	Initiated Microwave Discharge	153
4.4	Ionization Phenomena in a Superstrong Microwave Beam	156

4.4.1	Experimental Results	157
4.4.2	Ionization Upconversion of Frequency	159
4.5	Applications	160
4.5.1	Plasma Chemistry	160
4.5.2	Electron-Cyclotron Discharge	161
4.5.3	Ultraviolet Laser	162
4.6	Artificially Ionized Layer	162
4.6.1	Remote Spectroscopy of the Atmosphere	164
4.6.2	Ozone Generation	164
4.6.3	Atmospheric Purification of Freons	165
References		166
Chapter 5	Applications of High-Power Microwave Sources to Enhanced Radar Systems <i>by W. M. Manheimer, G. Mesyats, and M. I. Petelin</i>	169
5.1	Introduction	169
5.2	Backward-Wave Oscillators and Gyrotrons for Radar Systems	170
5.2.1	X-Band BWOs	170
5.2.2	Gyrotron Oscillators	173
5.2.3	Gyrotron Amplifiers	176
5.3	Radar Applications of High-Power Microwave Sources	182
5.3.1	Radar Range Equation	182
5.3.2	Single-Pulse Radar Return and Range Resolution	184
5.3.3	Velocity Resolution and Multipulse Radar Returns	187
5.3.4	Range Ambiguity, Blind Speed, and Dead Time	189
5.3.5	Amplifiers and Oscillators for Radars	190
5.4	Nanosecond Radar	190
5.5	Active Monitoring of the Atmosphere With Millimeter Waves	193
5.5.1	Millimeter-Wave Cloud Radars	197
5.5.2	Radar Scatter From Clouds	197
5.5.3	Analysis of Radar Returns From Clouds	199
5.5.4	High-Power Millimeter-Wave Atmospheric Probes	200
5.6	Space Debris Radar	202
Acknowledgments		205
References		206
Chapter 6	Modification and Measurement of the Atmosphere by High-Power Microwaves <i>by J. N. Benford</i>	209
6.1	Introduction	209
6.2	Atmospheric Diagnostics	209
6.2.1	Turbulence Structure	210
6.2.2	Relative Humidity	210
6.2.3	Trace Impurities	210
6.3	Ozone Conservation	212

6.4	Artificial Ionospheric Mirror	221
6.5	Technology Requirements for Atmospheric Measurement and Modification	222
6.6	Discussion	224
	Acknowledgments	226
	References	226
Chapter 7	Application of High-Power Microwave Sources to TeV Linear Colliders <i>by P. B. Wilson</i>	229
7.1	Introduction	229
7.1.1	Why Linear Colliders?	230
7.1.2	The First Linear Collider: The SLC	231
7.1.3	General Description of a Next-Generation Linear Collider	233
7.1.4	Worldwide R&D Programs on Linear Colliders	235
7.2	Basic Collider Parameters	238
7.2.1	Peak RF Power Requirement and Accelerating-Structure Design	238
7.2.2	Beam Loading and Average Power Requirement	246
7.2.3	The Longitudinal Wake Potential: Single and Multibunch Energy Spread	252
7.2.4	The Transverse Wake Potential and Dipole Wakefield Suppression	262
7.2.5	Beam-Beam Parameters	266
7.3	Overview of Collider Systems	274
7.3.1	Injection and Positron Production	274
7.3.2	Damping Rings, Bunch Compression, and Preacceleration	276
7.3.3	Main Linac Beam Dynamics	279
7.3.4	The Final Focus	282
7.4	RF System for a Linear Collider	284
7.4.1	Klystron Power Sources for Linear Colliders	285
7.4.2	Modulators	287
7.4.3	RF Pulse Compression	290
7.4.4	Overall RF System Efficiency	297
7.5	Comparison of 0.5-TeV Linear Collider Designs	298
7.6	Scaling to Higher Energy	301
7.6.1	Parameter Constraints at Constant RF Wavelength	301
7.6.2	Collider Scaling in Energy and RF Frequency	305
7.6.3	A Look Into the Future: Toward a 5-TeV Collider	310
7.7	Conclusion	313
	General References	314
	Acknowledgments	314
	References	314

Chapter 8	Processing of Material Using Microwave Radiation <i>by</i> Y. V. Bykov and V. E. Semenov	319
8.1	Introduction	319
8.2	Physical Fundamentals of Microwave Processing	322
8.2.1	Volumetric Heating	323
8.2.2	Specific Microwave Effect	330
8.2.3	Microwave-Assisted Nonequilibrium Plasma Chemistry	334
8.3	Technical Aspects of Microwave Processing	336
8.4	Conclusion	345
	References	348
	About the Authors	353
	Index	357
