

CONTENTS

Preface to the Second Edition	vii
Preface to the First Edition	xi
1. INTRODUCTION	1
<i>Occurrence of Plasmas in Nature</i> 1	• <i>Definition of Plasma</i> 3
• <i>Concept of Temperature</i> 4	• <i>Debye Shielding</i> 8
• <i>Plasma Parameter</i> 11	• <i>Criteria for Plasmas</i> 11
• <i>Applications of Plasma Physics</i> 13	
2. SINGLE-PARTICLE MOTIONS	19
<i>Introduction</i> 19	• <i>Uniform E and B Fields</i> 19
• <i>Nonuniform B Field</i> 26	• <i>Nonuniform E Field</i> 36
• <i>Time-Varying E Field</i> 39	• <i>Time-Varying B Field</i> 41
• <i>Summary of Guiding Center Drifts</i> 43	• <i>Adiabatic Invariants</i> 43
3. PLASMAS AS FLUIDS	53
<i>Introduction</i> 53	• <i>Relation of Plasma Physics to Ordinary Electromagnetism</i> 54
• <i>The Fluid Equation of Motion</i> 58	• <i>Fluid Drifts Perpendicular to B</i> 68
• <i>Fluid Drifts Parallel to B</i> 75	• <i>The Plasma Approximation</i> 77

4. WAVES IN PLASMAS	79
<i>Representation of Waves</i> 79 • <i>Group Velocity</i> 81 • <i>Plasma Oscillations</i> 82 • <i>Electron Plasma Waves</i> 87 • <i>Sound Waves</i> 94 • <i>Ion Waves</i> 95 • <i>Validity of the Plasma Approximation</i> 98 • <i>Comparison of Ion and Electron Waves</i> 99 • <i>Electrostatic Electron Oscillations Perpendicular to \mathbf{B}</i> 100 • <i>Electrostatic Ion Waves Perpendicular to \mathbf{B}</i> 109 • <i>The Lower Hybrid Frequency</i> 112 • <i>Electromagnetic Waves with $\mathbf{B}_0 = 0$</i> 114 • <i>Experimental Applications</i> 117 • <i>Electromagnetic Waves Perpendicular to \mathbf{B}_0</i> 122 • <i>Cutoffs and Resonances</i> 126 • <i>Electromagnetic Waves Parallel to \mathbf{B}_0</i> 128 • <i>Experimental Consequences</i> 131 • <i>Hydromagnetic Waves</i> 136 • <i>Magnetosonic Waves</i> 142 • <i>Summary of Elementary Plasma Waves</i> 144 • <i>The CMA Diagram</i> 146	
5. DIFFUSION AND RESISTIVITY	155
<i>Diffusion and Mobility in Weakly Ionized Gases</i> 155 • <i>Decay of a Plasma by Diffusion</i> 159 • <i>Steady State Solutions</i> 165 • <i>Recombination</i> 167 • <i>Diffusion across a Magnetic Field</i> 169 • <i>Collisions in Fully Ionized Plasmas</i> 176 • <i>The Single-Fluid MHD Equations</i> 184 • <i>Diffusion in Fully Ionized Plasmas</i> 186 • <i>Solutions of the Diffusion Equation</i> 188 • <i>Bohm Diffusion and Neoclassical Diffusion</i> 190	
6. EQUILIBRIUM AND STABILITY	199
<i>Introduction</i> 199 • <i>Hydromagnetic Equilibrium</i> 201 • <i>The Concept of β</i> 203 • <i>Diffusion of Magnetic Field into a Plasma</i> 205 • <i>Classification of Instabilities</i> 208 • <i>Two-Stream Instability</i> 211 • <i>The "Gravitational" Instability</i> 215 • <i>Resistive Drift Waves</i> 218 • <i>The Weibel Instability</i> 223	
7. KINETIC THEORY	225
<i>The Meaning of $f(\mathbf{v})$</i> 225 • <i>Equations of Kinetic Theory</i> 230 • <i>Derivation of the Fluid Equations</i> 236 • <i>Plasma Oscillations and Landau Damping</i> 240 • <i>The Meaning of Landau Damping</i> 245 • <i>A Physical Derivation of Landau Damping</i> 256 • <i>BGK and Van Kampen Modes</i> 261 • <i>Experimental Verification</i> 262 • <i>Ion Landau Damping</i> 267 • <i>Kinetic Effects in a Magnetic Field</i> 274	
8. NONLINEAR EFFECTS	287
<i>Introduction</i> 287 • <i>Sheaths</i> 290 • <i>Ion Acoustic Shock Waves</i> 297 • <i>The Ponderomotive Force</i> 305 • <i>Parametric Instabilities</i> 309 • <i>Plasma Echoes</i> 324 • <i>Nonlinear Landau Damping</i> 328 • <i>Equations of Nonlinear Plasma Physics</i> 330	

APPENDICES

<i>Appendix A. Units, Constants and Formulas, Vector Relations</i>	349
<i>Appendix B. Theory of Waves in a Cold Uniform Plasma</i>	355
<i>Appendix C. Sample Three-Hour Final Exam</i>	361
<i>Appendix D. Answers to Some Problems</i>	369

Index	417
--------------	------------

Index to Problems	421
