Preface.....	iii
1. Introduction.....	1
1.1 Radiation-Induced Changes and Radiation Quality.....	1
1.2 Specification of Radiation Quality: Historical.....	1
1.3 Current Definition of Linear Energy Transfer (LET).....	2
1.4 LET Distributions and Averages.....	2
1.5 Other Methods of Specifying Radiation Quality.....	3
1.6 Scope of this Report.....	3
2. Interaction of Radiation with Matter.....	3
2.1 General.....	3
2.2 Absorbed Dose, Particle Fluence and LET.....	4
2.3 Delta Rays.....	4
3. Definition and Concepts of LET.....	6
3.1 Current Definition of LET.....	6
3.2 1962 Definition of LET and Further Considerations.....	6
3.3 Concepts.....	6
3.4 LET Distributions and Their Averages.....	8
3.5 Recommendations.....	8
4. Calculations of Distributions of Absorbed Dose in LET.....	8
4.1 Introduction.....	8
4.2 Calculations of Particle Fluence Spectrum Using the Continuous Slowing Down Approximation (csda).....	9
4.3 Calculations of Absorbed Dose Distribution Based on a Two-Group Model.....	10
4.4 LET Distributions in Water.....	11
4.5 Variation of LET with Depth in a Medium.....	14
4.6 Average LET.....	14
5. Applications of LET Calculations.....	15
5.1 General.....	15
5.2 General Applications, RBE vs. LET.....	15
5.3 Limitations of RBE vs. LET Plots.....	15
6. LET in Radiation Protection.....	16
6.1 Quality Factor.....	16
6.2 Measurement of Absorbed Dose Distribution in LET for Protection Purposes.....	17
7. Limitations of the LET Concept.....	17
8. Other Methods of Specifying Quality.....	19
9. Conclusions.....	19
Appendix A1. Formulae for Stopping Power or LET.....	21
A1.1 General.....	21
A1.2 Heavy Particles.....	22
A1.3 Electrons.....	22
A1.4 Low Energy Heavy Particle Stopping Power and Ranges.....	22
Appendix A2. Definition and Measurement of Ranges.....	24
A2.1 Range and Stopping Power.....	24

	A2.2 Semi-Empirical Range-Energy Relations	25
	A2.3 Experimental Determination of Ranges	25
Appendix A3.	Measurement of dE/dl	26
	A3.1 General	26
	A3.2 Energy Distribution Method—Very Thin Absorber, $\Delta l \sim l_0$	26
	A3.3 Mean Energy Loss—Very Thin Absorber, $\Delta l \sim l_0$	26
	A3.4 Energy Absorption—Thin Absorber $R \gg \Delta l > l_0$	26
	A3.5 Slope of Energy versus Range Curve	26
	A3.6 Thin Detectors	26
Appendix A4.	Theoretical and Experimental Values for Range, dE/dl and LET	27
	A4.1 General	27
	A4.2 Electrons	28
	A4.3 Heavy Particles	31
Appendix A5.	Measurement of LET Distributions	34
Appendix A6.	Distribution of Ions in Clusters	35
Appendix A7.	Mean Excitation Energy	36
	A7.1 General	36
	A7.2 Empirical Relations	36
	A7.3 Recommended Values	36
	A7.4 Mixtures and Compounds	36
Appendix A8.	Application of LET in Radiobiology and Chemical Dosimetry	37
	A8.1 Direct and Indirect Action	37
	A8.2 Exponential Absorbed Dose-Survival Curve	37
	A8.3 Simple Target Theory	37
	A8.4 Target Theory and Inactivation by Multiple Ionizations	38
	A8.5 Target Theory, Complex Target	38
	A8.6 Indirect Action and Application to Chemical Dosimeters	39
Appendix A9.	List of Symbols	40
	A9.1 General	40
	A9.2 Absorbed Dose	40
	A9.3 Energy	40
	A9.4 Fluence	41
	A9.5 Ionization	41
	A9.6 Linear Energy Transfer	41
	A9.7 Range	42
	A9.8 Microdosimetry	42
	References	43
	ICRU Reports	48
	Index	50
