

CONTENTS

Preface	iii
Acknowledgements	viii
1. Introduction	1
2. Description of the Intercomparison Procedure	2
3. Radiation Fields: Production, Monitoring, and Stability	5
4. Dosimetry Systems Used by the Participating Groups	9
4.1 Neutron or Total Absorbed Dose Instruments	9
4.2 Gamma-Ray Dosimeters	12
5. Important Factors in Evaluations of Dose	14
5.1 Average Energy per Ion Pair, \bar{W}_N/\bar{W}_{GC}	14
5.2 Neutron Sensitivity of the Gamma-Ray Dosimeter, k_U	14
5.3 Kerma Values for Tissue and Chamber Materials, K_t/K_m ..	14
5.4 Relative Stopping Powers for Ionization Chambers	15
5.5 Calibration Methods for Dosimetry Systems	15
5.6 Subtended Angle of Detector at Measurement Positions ...	16
5.7 Counting Statistics and Dead-Time Losses	18
5.8 Inverse Square Corrections	19
5.9 Attenuation and Scatter Corrections	19
5.10 Other Corrections	20
6. Analysis of the Intercomparison	21
6.1 Method of Analysis	21
6.2 Analysis of Renormalized Values	25
6.3 Analysis for Uniform Parameters	29
6.4 Analysis of Calculated Responses, R_T^* and R_U^*	31
7. Conclusions and Recommendations	33
APPENDIX A RARAF Research Group	34
APPENDIX B Participants in the International Neutron Dosimetry Intercomparison	35
APPENDIX C Additional Information on the Analysis of the Intercomparison	36
APPENDIX D Monitoring System	42
APPENDIX E Calculated Neutron Spectra and Penetration in the Phantom	45
References	48
ICRU Reports	51
Index	53
