

Contents

Preface	i
I. Introduction	1
II. Conceptual Approaches to Radiation Protection	3
II.1 The Limitation Approach	3
II.2 The Assessment Approach	3
II.3 The Quality Factor	4
III. Radiation Quality	5
III.1 Specification in Terms of Linear Energy Transfer (LET or L)	5
III.2 Specification in Terms of Lineal Energy (y)	5
IV. Relative Biological Effectiveness	7
IV.1 Autonomous and Non-Autonomous Responses of Cells	7
IV.2 Experimental Findings	8
V. Conclusions	10
APPENDIX A. Quantitative Relations in Radiation Protection Systems	13
APPENDIX B. Relation Between Distributions in Linear Energy Transfer (L) and Lineal Energy (y)	15
APPENDIX C. Theoretical Considerations on RBE	16
APPENDIX D. Review of Experimental Data on the RBE of High-LET vs. Low-LET Radiation	19
References	26
ICRU Reports	30
