

CONTENTS

Preface	9
Notation	12
CHAPTER 1 — BASIC CONCEPTS	1
1.1. Functions	
1.2. Series	
1.3. Abelian summation	
1.4. Lebesgue integral	
1.5. Some formulas for trigonometric functions	
Problems	
CHAPTER 2 — CONCEPT OF A FOURIER SERIES	19
2.1. Solution of the equation of a vibrating string	
2.2. Fourier series of an integrable function	
2.3. Convergence of trigonometric series	
2.4. Convergence of a Fourier series	
Problems	
CHAPTER 3 — HILBERT SPACE	51
3.1. Introduction	
3.2. Concept of a Hilbert space	
3.3. Length of a vector and the distance between two vectors in a Hilbert space	
3.4. Complete Hilbert space	
3.5. Orthonormal sequences and the best approximation	
3.6. Orthonormalization	
3.7. Orthogonal systems	
Problems	
Appendix — The space of integrable functions	
Problems	

CHAPTER 4 — SOME SPECIAL FOURIER SERIES IN SPECIFIC HILBERT SPACES 101

- 4.1. Some properties of the space L_2
 - 4.2. Trigonometric Fourier series of functions of one variable
 - 4.3. Trigonometric Fourier series with a general period
 - 4.4. Fourier series of functions of several variables
 - 4.5. Expansions with respect to eigenfunctions
 - 4.6. Orthogonal polynomials
- Problems

CHAPTER 5 — CALCULATION OF FOURIER SERIES 149

- 5.1. Expansions of various functions
 - 5.2. Expansions of functions defined on an interval of half length
 - 5.3. Expansions of a non-periodic function
 - 5.4. Complex and phase forms of the Fourier series
 - 5.5. Application of various operations with series
 - 5.6. Application of functions of a complex variable
 - 5.7. Conjugate series
 - 5.8. Evaluation of various number series and integrals by means of Fourier series
- Problems

CHAPTER 6 — APPROXIMATE HARMONIC ANALYSIS 196

- 6.1. Introduction
 - 6.2. Krylov's method
 - 6.3. Approximate summation of series
 - 6.4. Numerical calculation of Fourier coefficients
- Problems

CHAPTER 7 — SOME SPECIAL CRITERIA FOR CONVERGENCE 225

- 7.1. Gibbs phenomenon
 - 7.2. Dirichlet's kernel
 - 7.3. Continuous periodic functions
 - 7.4. Principle of localization
 - 7.5. Absolutely continuous functions
 - 7.6. Functions of bounded variation
 - 7.7. Fourier coefficients and the properties of the sum
 - 7.8. Functions in $W_2^{(k)}$
 - 7.9. Convergence of arithmetic means
- Problems

CHAPTER 8 — FOURIER TRANSFORMS 260

8.1. Fourier transforms as a limit case of Fourier series

8.2. Inversion formula

8.3. Fourier transforms of functions in L_2

8.4. Properties of Fourier transforms

8.5. Fourier transforms of distributions

Problems

CHAPTER 9 — EXAMPLES OF THE APPLICATION OF FOURIER SERIES 292

9.1. Classical solution of the equation for a string

9.2. Generalized solution

9.3. Decomposition of a tone into harmonics. Vibrations of a tuner

9.4. Equation of heat conduction

9.5. Laplace equation

9.6. Some applications of Fourier series in the theory of integral equations

9.7. Some applications of Fourier transforms

Problems

CHAPTER 10 — SURVEY OF FOURIER SERIES AND FOURIER TRANSFORMS OF SOME COMMONLY USED FUNCTIONS 336
