Preface	page vii
Bibliographical Note	viii
<b>I Statistics of Ionization Currents</b>	
1.1 Basic Principles	9
1.2 Statistics of Electron Currents	10
1.3 Development of the Subject	14
1.4 Significance of the Static Breakdown Potential	16
1.4.1. <i>Probable Lifetime of a Gap with <math>V &lt; V_s</math></i>	
1.4.2. <i>Statistics of Breakdown in Hydrogen</i>	
1.4.3. <i>Fluctuations and Steady State Spatial Growth</i>	
<b>II Avalanche Studies and Temporal Growth</b>	
2.1 Introduction	23
2.2 Secondary Processes in a Townsend Discharge: $V < V_s$	24
2.3 Relation of Electrode Potentials to Gap Current when $V > V_s$	31
2.3.1. <i>Charge Movement and Gap Potential</i>	
2.3.2. <i>Potential Changes Due to Single Avalanches</i>	
2.4 Electron and Ion Currents in the Gap	35
2.4.1. <i>Effect of Electric Field on Positive Ion Con-         centration</i>	
2.4.2. <i>Measurement of Gap Current with a Finite         Series Resistor</i>	
2.4.3. <i>Effect of Secondaries in the Initial Avalanche</i>	
2.5 Application to Breakdown Studies	40
2.6 Steady-state Currents, Electron Detachment, and Delayed Ionization	42
2.6.1 <i>Negative Ion Processes</i>	

	2.6.2 <i>Mathematical Analysis of Currents in the Presence of Electron Detachment and Delayed Ionization</i>	
	2.6.3 <i>Modification of Townsend's Equation</i>	
<b>III</b>	<b>Temporal Ionization Growth for <math>V &gt; V_s</math> Involving Metastables and Delayed Photons</b>	
	3.1 Photon Delay Processes	53
	3.2 Solutions of the Growth Equations Involving Delay Processes	56
	3.3 Solution Involving Positive Ions and Delayed Radiation	58
	3.4 Solution Involving Diffusing Metastables	60
	3.5 Experimental Results	62
	3.6 Voltage Collapse in a Field Distorted by Space Charge: Transition to Glow	65
<b>IV</b>	<b>Electrical Breakdown of Gases at High Values of <math>pd</math> in Uniform Fields</b>	
	4.1 Mechanisms	70
	4.2 Problems of Breakdown at High Values of $pd$	72
	4.3 Effects of Attachment, Detachment, and Humidity	75
	4.4 Destruction of Excited and Metastable Atoms and Molecules	79
	4.5 Transition Region	81
	4.6 Formative Times at High $pd$	82
	4.7 Breakdown in Air at High Voltage	83
<b>V</b>	<b>Vacuum Breakdown</b>	
	5.1 Basic Processes	86
	5.2 Initiatory Electron Current	89
	5.3 Breakdown with Ambient Gas Pressures $\sim 10^{-5}$ torr.	92
	5.3.1 <i>Adsorbed Gas</i>	
	5.3.2 <i>Influence of Transverse Magnetic Fields</i>	
	5.4 Vacuum Breakdown $p \lesssim 10^{-8}$ torr	94
	References	97
	Index	101
