Introduction		1
Introduction to Paper 1		5
1   Extracts from <i>The Theory of Ionization of Gases by Collision</i>	<i>J. S. Townsend</i>	6
Introduction to Paper 2		13
2   Impulse Potential and Breakdown in Gases	<i>W. Rogowski</i>	14
Introduction to Paper 3		17
3   The Development of the Electron Avalanche in a Spark Channel	<i>H. Raether</i>	18
Introduction to Paper 4		27
4   The Development of Kanal Discharges	<i>H. Raether</i>	28
Introduction to Paper 5		41
5   A Theory of Spark Discharge	<i>J. M. Meek</i>	42
Introduction to Paper 6		53
6   Electrical Breakdown of Gases. Part 1: Spark Mechanism in Air	<i>F. Llewellyn Jones and A. B. Parker</i>	54
Introduction to Paper 7		71
7   Formative Time Lags of Spark Breakdown in Air in Uniform Fields at Low Overvoltages	<i>L. H. Fisher and B. Bederson</i>	72
Introduction to Papers 8, 9 and 10		83
8   The Growth of Ionization Currents in a Uniform Field $E(>E_s)$	<i>P. M. Davidson</i>	84
9   Growth of Current Between Parallel Plates	<i>P. M. Davidson</i>	88
10   Theory of the Temporal Growth of Ionization in Gases Involving the Action of Metastable Atoms and Trapped Radiation	<i>P. M. Davidson</i>	94

	Introduction to Papers 11 and 12	105
11	Simultaneous Measurement of Ionization and Attachment Coefficients <i>M. A. Harrison and R. Geballe</i>	108
12	A Condition on Uniform Field Breakdown in Electron Attaching Gases <i>R. Geballe and M. L. Reeves</i>	124
	Introduction to Paper 13	129
13	Measurement of Ionization and Attachment Coefficients in Sulphur Hexafluoride in Uniform Fields <i>M. S. Bhalla and J. D. Craggs</i>	130
	Introduction to Paper 14	145
14	Spark Channels <i>S. C. Haydon</i>	146
	Introduction to Paper 15	173
15	The Development of the Townsend Discharge, with Time, to Breakdown <i>W. Köhrmann</i>	174
	Introduction to Paper 16	187
16	Theory of the Development of a Spark Channel <i>S. I. Braginskii</i>	188
	Introduction to Paper 17	201
17	Anomalous Variations of the Sparking Potential as a Function of $p_0 d$ <i>F. M. Penning</i>	204
	Introduction to Papers 18 and 19	209
18	Extract from <i>Electrical Coronas</i> <i>L. B. Loeb</i>	212
	Characteristics of the Spark Transition in Asymmetrical Field Gaps for Negative Ion and Free Electron Gases <i>L. B. Loeb</i>	214
	Introduction to Paper 20	225
20	The Development of a Long Spark and Lightning <i>I. S. Stekolnikov and A. V. Shkilyov</i>	226
	Introduction to Papers 21, 22 and 23	243
21	Extracts from <i>Progressive Lightning—Part 2</i> <i>B. F. J. Schonland, D. J. Malan and H. Collens</i>	246
	Extracts from <i>Progressive Lightning, Part 4—The Discharge Mechanism</i> <i>B. F. J. Schonland</i>	260
22	The Pilot Streamer in Lightning and the Long Spark <i>B. F. J. Schonland</i>	266

*Contents*

ix

Introduction to Papers 24 and 25	281
24    Gas Breakdown at Optical Frequencies <i>R. G. Meyerand, Jr., and A. F. Haught</i>	284
25    Optical Frequency Electrical Discharges in Gases <i>R. W. Minck</i>	288
Index	293
