

## CONTENTS

Preface

Organization

Research Summaries

Group 1: Reactor Materials and Plasma-wall Interactions

1.1	Fusion reactor materials and plasma-wall interactions .....	1
1.2	The effects of alloying elements on the void-swelling in heavily irradiated materials .....	3
1.3	The effects of alloying elements on the void-swelling in heavily irradiated materials. Subtask: The research of void-swelling and blistering at high temperatures by HVEM and ion-accelerator and the construction of irradiation creep testing machine .....	5
1.4	Effect of alloying addition on void-swelling heavy irradiation --Irradiation induced segregation during ion and electron irradiation-- .....	7
1.5	The effect of alloying elements on the void-swelling due to heavy irradiation effects--Depth dependence of radiation hardening in 10 MeV $^4\text{He}^+$ -ion bombarded molybdenum, studied by micro-hardness test .....	9
1.6	In-situ observation of heavy-ion radiation damage .....	11
1.7	Void formation by HVEM and ion accelerator irradiation .....	13
1.8	Void swelling in proton irradiation Fe-Ni-Cr alloys .....	15
1.9	Void swelling in molybdenum and molybdenum-alloys irradiated by 0.9-MeV nitrogen ions .....	17
1.10	Material development for first wall of fusion reactor .....	19
1.11	Fundamental process of blister formation on the first wall of fusion reactor .....	21
1.12	Defect structure development in $\text{Ar}^+$ irradiated nickel .....	23
1.13	Radiation damage of fusion reactor materials .....	25
1.14	Irradiation effect on fatigue property of wall materials .....	27
1.15	Physical and chemical sputtering process of low-Z compounds and alloys .....	29
1.16	AES-SIMS-XPS study of physical and chemical sputtering process of low-Z compound materials .....	31
1.17	Compositional change of alloys induced by ion bombardments .....	33
1.18	Desorption measurements by ISS .....	35

1.19	Molecular processes of the interactions of atomic and ionic beams of hydrogen with the surface layers of solids .....	37
1.20	Surface effect on hydrogen permeation of first wall materials .....	39
1.21	Permeation of deuterium implanted into first wall materials .....	41
1.22	Hydrogen isotope permeation through fusion reactor materials: Oxidation of niobium metal and its alloy at very low oxygen partial pressure .....	43
1.23	Plasma wall interactions and their influence in the realization of study nuclear fusion plasma .....	45
1.24	Benchmark experiment for neutron transport through blanket and shield of fusion reactors .....	47
1.25	Measurements of neutron double differential cross sections for fusion materials .....	51
1.26	Topical meeting on nuclear problems for the nuclear design of fusion reactors .....	53
1.27	Neutron cross sections for design of a fusion reactor blanket .....	55
1.28	Photon production nuclear data of fusion reactor materials for fast neutrons .....	57
1.29	Cross sections for measurements of neutron dose in heavy fast neutron irradiation experiments .....	59
1.30	14 MeV (n,p) reaction using a position sensitive counter-telescope with large angular acceptance .....	61
1.31	Evaluation of weldability and joining properties on materials for nuclear fusion reactor vessel .....	63
1.32	Evaluation of weldability and joining properties on materials for nuclear fusion reactor vessel--Evaluation of weldability for weld zone of high precision joining .....	65
1.33	Evaluation of weldability and joining properties on materials for nuclear fusion reactor vessel--Joining of dense silicon carbide .....	67
1.34	Evaluation of weldability and joining properties on materials for nuclear fusion reactor vessel--Metallographic estimate for welded joint under severe environment .....	69
1.35	Evaluation of weldability and joining properties on materials for nuclear fusion reactor vessel--High precision-welding and weldability .....	71
1.36	Evaluation of weldability and joining properties on materials for nuclear fusion reactor vessel--Microstructural evaluation	

	of welds under environment .....	73
1.37	Evaluation of weldability and joining properties on materials for nuclear fusion reactor vessel--Joining process for composite materials and their quality assurance .....	75
1.38	Evaluation of weldability and joining properties on materials for fusion reactor vessel--Metallurgical evaluation of weld joints under fusion reactor condition .....	77
1.39	Control of weld defects in electron beam welding of Ni-base superalloy for fusion reactor .....	79
1.40	Application of low Z material as the first wall of fusion reactor .....	81
1.41	Application of low Z material as the first wall of fusion reactor--Fabrication of carbon/carbon composite, and its mechanical and thermal properties-- .....	83
1.42	Plasma spray coating of low Z ceramics on molybdenum .....	85
1.43	Preparation of low Z ceramics as a coating material for first wall of fusion reactor by chemical vapor deposition .....	87
 Group 2: Science, Technology and Biological Effects of Tritium		
2.1	Cooperative study on science, technology and biological effects of tritium .....	89
2.2	Fundamental studies on tritium technology--Breeding, separation and reactivity .....	91
2.3	Mass spectroscopic analysis of tritium- and helium-containing systems .....	93
2.4	An interval friction study of tritium in niobium--The concentration, the microscopic state of tritium in metals and their effects on materials properties .....	96
2.5	Observation of tritium trapping in fusion reactor materials by micro-autoradiography .....	98
2.6	Tritium processing study relating to fusion reactor research .....	100
2.7	An apparatus for accurate determination of tritium release rate from neutron irradiated materials by helium gas sweeping method .....	102
2.8	Removal of tritium from liquid lithium by extraction with molten salts and gettering with solid materials .....	104
2.9	Estimation on leakage of tritium gas--From high-pressure experiments on H <sub>2</sub> , D <sub>2</sub> , and He gases-- .....	106

2.10	Safety handling and waste treatment of tritium .....	108
2.11	Behavior recoil tritium atoms in the solid phase .....	110
2.12	Monitoring system for fusion reactor and tritium plant .....	112
2.13	Permeation and diffusion of tritium in metals .....	114
2.14	Permeation and contamination of tritium in gloves .....	116
2.15	Compatibility of metals with liquid lithium under hydrogen or deuterium atmosphere and external radiation effects on hydrogen diffusion in metals .....	118
2.16	Behaviour of tritiated water in food chains and its waste disposal .....	120
2.17	Construction of facilities for operation with tritium in biological research .....	122
2.18	Basic problems and improvement of equipments for the studies of the effect of tritium on living materials .....	124
2.19	Kinetics of tritium in water molecules in mammals .....	126
2.20	Effects of tritium on the living organisms .....	128
2.21	Behavior of tritium in the environmental and its effects to human beings .....	130
2.22	Specificity of base substitutions induced by decays from tritiated thymidines and HTO-irradiation in <u>E.coli</u> .....	132
2.23	Incorporation, distribution and molecular behavior of tritium in higher organisms from tritiated water in the environment .....	134
2.24	Effects of tritium on DNA .....	136
2.25	Effects of tritium $\beta^-$ -decay on the hydrogen bonded systems of DNA bases. Preliminary theoretical calculations .....	138
2.26	Effects of tritium on the living system and biomolecules .....	140
2.27	Tritium handling technology for fusion reactors and critical discussions on tritium-related problems for burning plasma .....	142
2.28	Symposium: On experimental equipments desirable for the investigation of tritium .....	144
2.29	Symposium: Problems of tritium handling raised health-physics viewpoints .....	146
 Group 3: Fundamentals of Reactor Plasma Control		
3.1	Fundamentals of controlling fusion plasma .....	149
3.2	Theoretical approach to diagnostic methods in fusion plasmas .....	152
3.3	High temperature plasma diagnostics with far infrared radiations ....	154

3.4	Interferometric study of high- $\beta$ plasma with high temporal- and spatial resolutions .....	158
3.5	Measurement of impurity atom densities in high-temperature plasma devices with resonant scattering .....	160
3.6	Resonance scattering experiment on impurity ion .....	162
3.7	Extreme ultraviolet radiations and charge exchange processes in collisions of multiply-charged ions .....	164
3.8	Spectroscopic measurement of the fluctuating field in plasmas with aid of the selective excitation .....	166
3.9	Development of single-optical-axis monochromater in VUV region for plasma research .....	168
3.10	Measurement of high velocity neutral particles from plasma .....	170
3.11	Measurement of plasma current profile by neutral beam probing .....	172
3.12	A heavy ion beam probe applicable to a medium-sized device for nuclear fusion research .....	174
3.13	Spectroscopic study of new laser materials .....	176
3.14	Parametric study and development of a simulation code for a REB-pumped KrF laser system .....	178
3.15	Pumping and amplification property of an electron beam pumped KrF laser .....	180
3.16	Time-resolved spectroscopy of atomic and molecular processes in ionized gases by high intensity pulsed electron beam .....	182
3.17	Effects of foreign gases on the KrF laser power and spectrum .....	185
3.18	Fluorescence from HgBr produced by photodissociation .....	187
3.19	Cs-Xe excimer and HF laser .....	189
3.20	Intense electron beam excitation of new gas laser materials in ultraviolet region .....	191
3.21	Optical pulse compression for high power lasers .....	193
3.22	Time resolved spectroscopic study of excited state population in excimer laser .....	195
3.23	Study on saturation characteristics of laser absorption with organic compounds .....	197
3.24	Measuring surface and bulk absorption coefficient of high power laser optics by holographic interferometric methods .....	199
3.25	Theoretical research of free electron laser .....	201
3.26	Development of optical and magnetic diagnostic technique in laser-fusion-plasmas .....	203
3.27	Tomographic image process by fresnel zone plate .....	205

3.28	High gain polymer pellet for inertial nuclear fusion .....	207
3.29	Electrodynamic method of pellet handling .....	209
3.30	Heating and confinement of fusion plasmas produced by Cylindrically converging blast waves .....	211
3.31	Generation of high power mm-wave and its transmission technique .....	213
3.32	Current sustaining and plasma heating by travelling lower hybrid wave .....	217
3.33	An optimization of confinement and heating in non-axisymmetric tori .....	219
3.34	DC ion source and optical measurement of beam species .....	221
3.35	Development of negative ion sources of deuteron by the use of Cs-D <sub>2</sub> discharge .....	224
3.36	Transport phenomena near the plasma surface in RF heating .....	226
3.37	Direct energy conversion through charged particle trapping .....	228
3.38	Pulsed, gas-insulated discharges .....	230
3.39	Direct converter for tandem mirror reactor .....	232
3.40	Foundation of numerical method in nuclear fusion research .....	234
3.41	Field-reversed ion ring plasma systems .....	236
Group 4: Technology of Superconducting Magnet		
4.1	Basic aspects of R & D of superconducting magnet technology .....	239
4.2	A-15 and chevrel phase superconducting compounds .....	241
4.3	Microstructures and superconducting properties of <i>in situ</i> Cu-Nb <sub>3</sub> Sn composites .....	243
4.4	Preparation of high T <sub>c</sub> superconducting materials .....	245
4.5	Production of superconducting materials for nuclear fusion reactors by reaction diffusion method .....	247
4.6	High temperature superconductors resistant to radio-activity and stress force .....	249
4.7	The conceptual design of splittable superconducting coils for toroidal type fusion reactors .....	251
4.8	Superconducting Nb <sub>3</sub> Sn wire with high critical current density in high magnetic field .....	253
4.9	Radiation effects of superconducting magnet materials at low temperature .....	255
4.10	Performance study on superconducting magnet materials under thermonuclear fusion conditions--Part I Radiation effects-- .....	257

4.11	Cooling system of superconducting magnets .....	259
4.12	In-situ Nb <sub>3</sub> Sn reaction with Sn pre-loading by (Al-Sn) alloy .....	261
4.13	Effects of mechanical stresses on dielectric breakdown strengths of PET and FRP at room temperature .....	263
4.14	Fundamental electromagnetic phenomena in superconducting cables .....	265
4.15	Pinning characteristics of superconducting materials at high magnetic fields .....	267
Group 5: Design and Evaluation of Fusion Reactor Design		
5.1	Conceptual design and assessment of fusion reactors .....	269
5.2	Introduction to science assessment of nuclear fusion research .....	271
5.3	Advanced fuel cycles .....	273
5.4	Organization of fusion researches in universities .....	275
5.5	Conceptual design of magnetic open systems of fusion reactor .....	277
5.6	Conceptual design studies on ion-beam-driven inertial confinement fusion reactor .....	279
5.7	Cooling method of fusion reactor blanket by liquid-metal annular-dispersed two-phase flow .....	281
5.8	Sodium mist cooling for a hot surface in a fusion reactor .....	283
5.9	Natural convection in liquid metal under magnetic field .....	285
5.10	MHD pressure drop of NaK flow in a circular pipe .....	287
5.11	High-heat-flux wall cooling by liquid and dispersed melting particle flow .....	289
5.12	Dosimetry of single burst radiations from nuclear fusion experiments .....	291
5.13	Materials performance under pulsative composite stress in ICFR .....	293
5.14	Workshop on radiation dosimetry and hazard control for experimental nuclear fusion studies .....	295
