

## CONTENTS

Preface

Organization

Research Summaries

### Group I : Reactor Materials and Plasma-wall Interactions

I. 1	Fusion reactor materials and plasma-wall interactions .....	1
I. 2	Effects of alloying elements on the mechanical properties of first-wall-materials during or after particle irradiation .....	3
I. 3	The high temperature creep and He embrittlement of Fe-Ni-Cr alloys .....	5
I. 4	The influence of purity, cold work and alloying elements on the anneal hardening in neutron-irradiated molybdenum .....	7
I. 5	Mechanical tests under or after irradiation .....	9
I. 6	Irradiation effect of fatigue properties of wall materials .....	11
I. 7	Mechanical properties changes of Fe-Cr alloys by fast neutron irradiation .....	13
I. 8	Effect of alloying elements on microstructure and mechanical properties of irradiated new ferritic steel .....	15
I. 9	Alloying effect on the fundamental process of irradiation creep .....	17
I.10	Testing of the mechanical strength properties for the irradiated materials using micro-size specimen .....	19
I.11	Software tools for materials evaluations .....	21
I.12	Helium embrittlement and irradiation creep study at NRIM .....	23
I.13	Creep ductility of austenitic Ni-Cr-Fe alloys .....	25
I.14	Development of coating technique for first wall of fusion reactor and evaluation for irradiation resistivity .....	27
I.15	Irradiation effects of titanium carbides .....	29
I.16	Fundamental research of aluminum alloys as a material for fusion reactor .....	31
I.17	Phase transformation in alloys under irradiation .....	33
I.18	The effects of alloying elements on the void swelling in heavily irradiated materials .....	35
I.19	The effects of alloying elements on the void swelling in heavily irradiated materials - Correlations micro structures irradiated by electrons and ions .....	37

I.20	The effect of alloying elements on the void swelling in heavily irradiated materials - radiation induced segregation and phase change - .....	39
I.21	The effects of alloying elements on the void swelling in heavily irradiated materials - In-situ observation of radiation damage and simulation correlation .....	41
I.22	Irradiation behavior of graphite .....	43
I.23	The effect of alloying elements on the void-swelling in heavily irradiated materials - fundamental process in the formation of voids and blisters .....	45
I.24	Voids and bubbles in argon irradiated nickel .....	47
I.25	The effects of alloying elements on the void-swelling in heavy irradiated materials - radiation damages induced by 14mev neutron and heavy ion irradiations .....	49
I.26	The effects of alloying elements on the void-swelling in heavily irradiated materials. - The effects of nitrogen on the void-swelling of 340L stainless steels. ....	51
I.27	The effects of alloying elements on the void-swelling in heavily irradiated materials - Void swelling in solution treated, 20% cold worked and 20% cold-worked + aged Ti-modified 316 steel .....	53
I.28	Study of physical and chemical sputtering processes of Low-Z compounds and alloys .....	55
I.29	AES-SIMS-XPS study of physical and chemical sputtering processes of low-Z compound materials .....	57
I.30	Compositional change of alloys induced by preferential sputtering .....	59
I.31	Evaluation of ion impact desorption cross-section .....	61
I.32	Physical and chemical properties of low Z compound thin films .....	63
I.33	Molecular processes of the interaction of hydrogen atomic beam with the surface layers of solids .....	65
I.34	Plasma wall interactions and their influence in the realization of steady nuclear fusion plasma .....	67
I.35	Preferential sputtering in the first wall materials by ISS-SIMS-SCANIR .....	69
I.36	Hydrogen permeation and recycling behaviors of first wall materials .....	71

I.37	Interface characteristics of coating materials .....	73
I.38	Benchmark experiment for neutron transport through blanket and shield of fusion reactors .....	75
I.39	Photon production nuclear data of fusion reactor materials for fast neutrons .....	77
I.40	Measurement of neutron double differential cross sections for fusion reactor materials and development of related code systems .....	79
I.41	Neutron dosimetry in irradiation fields of fast neutron sources .....	82
I.42	Specialist meeting on fusion neutron shielding and skyshine .....	84
I.43	Workshop on the development of intense neutron source .....	86
I.44	Evaluation of weldability and joining properties on materials for nuclear fusion reactor vessel .....	88
I.45	Evaluation of weldability and joining properties on materials for fusion reactor vessel. Evaluation of weldability for weld zone of high precision joining .....	90
I.46	Evaluation of weldability and joining properties on materials for nuclear fusion reactor vessel. Subject; high precision welding, weldability and cutting .....	92
I.47	Evaluation of weldability and joining properties on materials for fusion reactor vessel. Microstructural evaluation of welds under fusion reactor environment .....	94
I.48	Evaluation of weldability and joining properties on materials for fusion reactor vessel. Metallurgical evaluation of weld joints under fusion reactor condition .....	96
I.49	Evaluation of weldability and joining properties on materials for fusion reactor vessel. Control of welding stress and strain in structural members and welded joints .....	98
I.50	Evaluation of weldability and joining properties on materials for fusion reactor vessel. Weldability and its improvement of molybdenum .....	100
I.51	Evaluation of weldability and joining properties on materials	

	for fusion reactor vessel.	
	Weldability of austenitic alloys .....	102
I.52	Evaluation of weldability and joining properties on materials for fusion reactor vessel.	
	In-process measurement in high precision joining process .....	104
I.53	Evaluation of weldability and joining properties on materials for fusion reactor vessel.	
	In situ experiment with a ultra-high voltage electron microscope - The effect of reflecting condition on the secondary defect formation in crystals by electron irradiation - .....	106
I.54	Plasma spray coating of low Z ceramics on molybdenum .....	108
I.55	Ceramic for fusion reactor application - Pressureless sintering of SiC .....	110
I.56	Ceramics for fusion reactor application - Thermal conductivity of carbon fiber reinforced carbon composite .....	112
I.57	Ceramics for fusion reactor application - Bonding mechanism of ceramic coatings and its improvements .....	114
I.58	Ceramics for fusion reactor application - Strengthening mechanism of ceramics/metal interfacial bonding .....	116
I.59	Ceramics for fusion reactor application - Joining of alumina .....	118
I.60	Ceramics for fusion reactor application - Joining of dense silicon carbide .....	120
I.61	Susceptibility of solidification cracking and welding conditions of sus 316 .....	122
I.62	In situ, low temperature coating of the first wall by plasma CVT .....	124

**Group II : Science, Technology and Biological Effects of Tritium**

II. 1	Cooperative study on science, technology and biological effects of tritium .....	127
II. 2	Fundamental studies on tritium technology . . . . Breeding, separation and reactivity .....	129
II. 3	Separation of the products of exchange reactions and of recoil reactions involving tritium .....	131
II. 4	Mechanical and magnetic resonance studies of tritium in materials (The state of tritium in metals and the reactivity with metals) .....	133

II. 5	Quantitative analysis, thermal diffusion, and solubility data of tritium in Nb and SUS 316-stainless steel .....	135
II. 6	Distribution of tritium in 316 stainless steel .....	137
II. 7	Accumulation of tritium to the supports of oxidation catalysts .....	139
II. 8	Separation of tritium isotope by distillation of water .....	141
II. 9	Effect of lead on the formation of tritium in LiF-PbF <sub>2</sub> pellet .....	143
II.10	Removal of hydrogen from air by an oxidation-adsorption method .....	145
II.11	Development of tritium removal process .....	147
II.12	Estimation on leakage of tritium gas - from high-pressure experiments on H <sub>2</sub> ,D <sub>2</sub> and He gases - .....	149
II.13	Hydrogen permeabilities of various glove materials .....	151
II.14	Storage of tritiated waste .....	153
II.15	Characteristics of cryosorption pumping .....	155
II.16	Development of DT fuel filling technique in laser fusion target .....	157
II.17	Safety assessment on tritium waste .....	159
II.18	Behavior of recoil tritium atoms in the solid phase .....	161
II.19	On permeation and diffusion of tritium in metals .....	163
II.20	Compatibility improvement of metals with Li under hydrogen of deuterium atmosphere .....	165
II.21	Monitoring system for fusion reactor and tritium plant .....	167
II.22	Development of rubber materials having the excellent barrier property of tritium gas .....	169
II.23	Waste disposal and equipments for the studies on the tritium behavior in food chain .....	171
II.24	Tritium safety clean cabinet and its use in biological experiments .....	173
II.25	Biological effect of tritium on the cellular and improvement of the incinerator of tritium-bearing wastes .....	175
II.26	Effects of tritiated water on biological macromolecules and cells .....	177
II.27	Effects of tritium on the living organisms (Especially on human being) .....	180
II.28	Effects of tritiated water on the organization of chromatin .....	182
II.29	Incorporation, distribution and molecular behavior of tritium	

	in higher organisms from tritiated water in the environment .....	184
II.30	Yields of hydroxyl and reductive species in tritiated water based on the tetranitromethan radiolysis .....	186
II.31	Behavior of tritium in the environment and its effect to human beings .....	188
II.32	Molecular analysis and evaluation of genetic effects of tritium irradiation .....	190
II.33	Specificity of base change mutations induced by tritiated water and $\gamma$ -rays in the <u>lacI</u> gene of <u>E. Coli</u> .....	192
II.34	Symposium: preparation for setting up guidelines for safety handling of tritium .....	194
II.35	Symposium: Tritium handling technology for fusion reactors and critical discussions on tritium-related problems for burning plasma .....	196

**Group III : Fundamentals of Reactor Plasma Control**

III. 1	Fundamentals of controlling fusion plasma .....	199
III. 2	High temperature plasma diagnostics with far infrared radiations .....	201
III. 3	Measurement of atomic density near the vacuum wall of high-temperature plasma devices with resonance scattering .....	209
III. 4	Optical study of plasma focus with high temporal- and spatial resolutions .....	211
III. 5	Spectroscopic measurement of the fluctuating field in plasmas with aid of the selective excitation .....	213
III. 6	Development of a single-optical-axis monochromator in VUV region for plasma research .....	215
III. 7	Development of optical and magnetic diagnostic technique for laser fusion .....	217
III. 8	Application of nuclear track method to plasma particle measurements .....	219
III. 9	Extreme ultraviolet radiations and charge exchange processes in collisions of multiply-charged ions .....	221
III.10	A heavy ion beam probe applicable to a medium-sized device for nuclear fusion research .....	223
III.11	Spectroscopic study of new laser materials .....	225
III.12	Spectroscopic study of new laser materials	

	1. Development of an accurate model of E-beam pumped KrF laser medium .....	227
III.13	Spectroscopic study of new gas lasers	
	2. Time-resolved spectroscopy of atomic and molecular processes in ionized gases by high intensity pulsed electron beams .....	230
III.14	Spectroscopic study of new laser materials	
	3. The transfer collision rate and excimer formation rate of Cs-Xe .....	232
III.15	Spectroscopic study of new laser materials	
	4. Spectroscopic study of REB-pumped SeO <sub>2</sub> vapor .....	234
III.16	Spectroscopic study of new laser materials	
	5. Laser induced perturbation mechanism in CO <sub>2</sub> lasing gas .....	236
III.17	Spectroscopic study of new laser materials	
	6. Development of simulation codes for discharge RGH lasers .....	238
III.18	Spectroscopic study of new laser materials	
	7. Intense electron beam excitation of new gas laser materials in ultraviolet region .....	240
III.19	Spectroscopic study of laser materials	
	8. Electrooptic control of temporal and spectral shapes of high power laser pulses .....	242
III.20	Spectroscopic study of new laser materials	
	9. Measurements and non-empirical calculations of rotational relaxation rates of some laser molecules .....	244
III.21	Spectroscopic study of new laser materials	
	10. Theoretical analysis of free electron laser .....	246
III.22	Time resolved spectroscopic study of excited state population in excimer laser .....	248
III.23	Spectroscopic study on efficiency improvement rare gas halide excimer lasers .....	250
III.24	High-efficiency, high-power, short-pulse chemical lasers .....	252
III.25	Growth of large size kdp single crystal for high power harmonic generation in laser nuclear fusion .....	254
III.26	Study on saturation characteristics of laser absorption with organic compounds .....	256
III.27	Wave heating and control of high temperature plasmas .....	258
III.28	Injection-locked TEA CO <sub>2</sub> laser for driving FIR lasers .....	263
III.29	Compressional alfvén wave heating of a theta-pinch plasma .....	265

III.30	Nonadiabatic scattering of ion beams due to a periodic magnetic field .....	267
III.31	Development of negative ion source .....	269
III.32	Electrostatic energy conversion from charged particles .....	271
III.33	Theoretical approach to diagnostic methods in fusion plasmas .....	273
III.34	Electrodynamic handling of D-T pellet .....	276

#### **Group IV : Technology of Superconducting Magnet**

IV. 1	Basic aspects of R&D of superconducting magnet technology (The fourth groups) .....	279
IV. 2	A-15 and chevrel phase superconducting compounds .....	281
IV. 3	Preparation of superconducting Mo-Si amorphous alloys by sputter-deposition .....	283
IV. 4	Preparation of high T <sub>c</sub> superconducting materials .....	285
IV. 5	Production of superconducting materials for nuclear fusion reactors by reaction diffusion method .....	287
IV. 6	High critical magnetic field superconductors resistant to radio-activity and stress force .....	289
IV. 7	Magnetomechanical behavior of superconducting magnets for fusion reactor .....	291
IV. 8	Superconducting Nb <sub>3</sub> Sn conductors with high critical current density in high magnetic field .....	293
IV. 9	Production of superconducting microwire by the method of glass-coated melt spinning .....	295
IV.10	Cryogenic irradiation effects of superconducting magnet materials by use of 5 MW reactor .....	297
IV.11	Performance study on superconducting magnet materials under thermonuclear fusion conditions .....	299
IV.12	Development of a cooling system of superconducting magnets .....	301
IV.13	Internal diffusion fabrication of in-situ Nb <sub>3</sub> Sn wire with the jelly-roll structure .....	303
IV.14	Pinning characteristics of superconducting materials in high magnetic fields .....	305
IV.15	The augmentation of heat transfer from superconducting cable to liquid helium .....	307
IV.16	Dielectric-breakdown behaviors of PET and FRP under mechanical stresses at cryogenic temperatures .....	309

IV.17	Energy storage systems by superconducting magnets .....	311
-------	---	-----

**Group V : Design and Evaluation of Fusion Reactor Design**

V. 1	Conceptual design and assessment of fusion reactors .....	313
V. 2	An assessment of fusion reactor safety .....	315
V. 3	System design of fusion reactors .....	317
V. 4	Conceptual design of magnetic open system of fusion reactor .....	319
V. 5	Conceptual design studies on Ion-Beam-Driven inertial confinement fusion reactor .....	321
V. 6	Analysis of fission-fusion hybrid reactor system .....	323
V. 7	Characteristics of liquid film flow in a vertical magnetic field .....	325
V. 8	Sodium mist cooling for a hot surface in a fusion reactor .....	327
V. 9	Thermal characteristics of gas-cooled magnetically confined fusion reactors .....	329
V.10	Flow and heat transfer characteristics in lithium loop under magnetic field .....	331
V.11	Design study of the steady toroidal reactor .....	333
V.12	System design of inertial confinement fusion reactor .....	335
V.13	A fracture mechanics of stainless steel related to the dynamic electromagnetic force .....	337
V.14	Materials performance under pulsative composite stress in ICFR .....	339
V.15	Dosimetry of single burst radiations from nuclear fusion experiments .....	341
V.16	Fusion research activities in Japan I - Plasma experiments .....	343
V.17	Partial charge grouping of fusion researches in universities .....	345
