Preface

Organization

Research Summaries

Group I: Reactor Materials and Plasma-wall Interactions

I. 1	Fusion reactor materials and plasma-wall interactions	1
I. 2	The effects of heavy irradiations on the ferritic stainless steels .	3
I. 3	The effects of heavy irradiations on the ferritic stainless steels -- Simulation irradiation studies	5
I. 4	The effects of heavy irradiations on the ferritic stainless steels -- Radiation-induced segregation, phase change and He effect	7
I. 5	<i>In situ</i> observation of radiation damage and simulation correlation .	9
I. 6	Formation mechanism of voids and bubbles	11
I. 7	The effects of heavy irradiations on ferritic stainless steels -- Behavior of hydrogen and helium	13
I. 8	Radiation effects on the characteristics of steels	15
I. 9	Change in microstructure and toughness of ferrite-martensite stainless steel during long-term aging	17
I.10	Cascade damages and microstructure changes induced by irradiations with heavy ions and reactor neutrons	19
I.11	Evolution of radiation induced microstructure under stress	20
I.12	Evolution of cavity microstructure in dual-ion irradiated iron alloys	22
I.13	Effects of radiation damage on mechanical behavior of nuclear fusion materials	24
I.14	A study of irradiation creep and the establishment of miniature sample testing technique	27
I.15	Development of ferritic steels for first wall of fusion reactors ...	32
I.16	<i>In situ</i> measurements of fatigue process under irradiation	34
I.17	Radiation effects on the mechanical properties of materials -- Correlation between microstructure and mechanical properties examined with micro-specimens	36
I.18	Impact strength studies using small test pieces	38
I.19	Development of miniature sample testing method for irradiated materials	40
I.20	Development of modeling soft ware for irradiation effects	42
I.21	Irradiation creep of 20% cold worked 316 stainless steel	44

I.22	Effect of proton irradiation on the embrittlement of HT-9 steel	46
I.23	Effect of additional elements on the void swelling and on the mechanical properties at high temperature after the irradiation	48
I.24	Ion simulation of phase transformations of ferritic steels during neutron irradiation	50
I.25	Damage evolution of heavily-irradiated metals and alloys with ions and neutrons	51
I.26	Accumulation mechanisms of hydrogen isotopes and radiation-induced lattice defects on the first wall of a fusion reactor	53
I.27	Particle and energy balance in hydrogen recycling in fusion reactor materials	55
I.28	Nuclear reaction analysis of deuterium on stainless steel surface ..	57
I.29	Ion-induced desorption of atoms on the surface	59
I.30	<i>In situ</i> surface analysis under hydrogen ion bombardment	61
I.31	Thermal desorption of deuterium implanted into graphite	63
I.32	Isothermal annealing test of ion irradiated titanium	65
I.33	Diffusion coefficient of tritium in SUS 316 stainless steel	67
I.34	Computer studies on energetic hydrogen behavior in solids and modeling of hydrogen recycling phenomena	69
I.35	Plasma surface interactions of low-Z compound materials with hydrogen isotope ions	70
I.36	Analytical methods for material transport phenomena between solid surface layers and gases during hydrogen recycling process	72
I.37	Surface effects on hydrogen absorption and permeation through first wall material	74
I.38	The effect of the plasma-surface interaction on the thermonuclear plasma	76
I.39	Development and evaluation of ceramic materials for fusion reactors	78
I.40	Joining of dense silicon carbide	79
I.41	Strengthening of ceramic-metal interface	81
I.42	Development and evaluation of ceramic materials for fusion reactor -- High temperature properties of C/C composite	83
I.43	Thermal conductivity measurement of ceramics at high temperatures by transient hot wire method	85
I.44	Radiation damage in oxide and carbide ceramics	87
I.45	Irradiation effects and preparation of substoichiometric titanium carbide coatings	89
I.46	Preparation and irradiation behavior of CVD-SiC	91

I.47	Effects of neutron irradiation on SiC fiber	93
I.48	Radiation behavior of low-Z ceramics	95
I.49	Thermal fatigue test of low-Z coating material	97
I.50	Bonding ceramics to metal surfaces using high pressure pressing ...	99
I.51	Fast neutron and ion irradiation effects on polymers and organic composites for fusion reactors	101

Group II : Science, Technology and Biological Effects of Tritium

II. 1	Cooperative works on fundamental works on tritium technology, behavior of tritium in environment, and biological effects of tritium	103
II. 2	Study group meeting: On tritium handling in large scale fusion experimental facilities I; Once through operation mode	105
II. 3	Study group meeting: On tritium handling in large scale fusion experimental facilities II; Recycle operation mode	107
II. 4	Fundamental studies on tritium technology — Breeding, recovery, and recycling	109
II. 5	Tritium-release behavior from irradiated lithium compounds	111
II. 6	Chemical effects of ${}^6\text{Li}(n, \alpha)\text{T}$ reaction	113
II. 7	Formation and recovery of tritium compound in LiF single crystal irradiated by neutron	115
II. 8	Permeation of hydrogen isotopes through nickel by pressure oscillation method	117
II. 9	Hydrogen isotope effects at desorption of water from Desiccants-II	119
II.10	Thermomigration of tritium in Nb, Ta and Ti	121
II.11	Separation and analysis of the products of exchange reactions and recoil reactions of tritium	123
II.12	Synthesis of [2- ${}^{14}\text{C}$, 5- ${}^3\text{H}$] cytosine using bromine and tritium gas .	125
II.13	Recovery of tritium by metal-chalcogenide laminated materials	127
II.14	Development of cryosorption pump for fusion vacuum system	129
II.15	Recovery of hydrogen isotopes in an inert gas in a zirconium particle packed bed	131
II.16	Detection and separation of hydrogen isotopes with drift tube technique	133
II.17	Tritium measurement by photon counting	135
II.18	Preparation of input to a data base of thermophysical properties of tritium and tritium oxide	137
II.19	Fundamental studies on tritium technology — Safety handling,	

	permeation control and waste management —	139
II.20	Diffusion and solubility of tritium in various metals	141
II.21	Distribution of tritium in aluminum and aluminum alloys	143
II.22	Adsorption of tritiated water vapor by molecular sieve	145
II.23	Development of rubber materials having the excellent barrier property of tritium gas	147
II.24	Infra-red spectra measurement of condensed hydrogen isotopes	149
II.25	Recovery and utilization of tritium-gas	151
II.26	Capture of recoil tritium by graphite	153
II.27	Permeation, diffusion and contamination of tritium	155
II.28	Development of DT fuel system for laser fusion target	157
II.29	Sorption and desorption of tritium on glove rubbers	159
II.30	Safety confinement of tritium	161
II.31	Tritium breeding performance of blanket materials for fusion reactors	163
II.32	Laser isotope separation of deuterium and tritium	165
II.33	Synthesis and properties of lithium double oxides as tritium breeder — Synthesis of LiAlO_2 by hydrolysis of metal alkoxides ...	167
II.34	Enrichment of tritium from hydrogen tritide by means of thermal diffusion column combined with a catalyst	169
II.35	Isotopic enrichment of tritium by using host-guest chemistry	171
II.36	Tritium adsorption of reactor materials damaged by heavy-ion irradiation	173
II.37	Behavior of tritium in ceramics	175
II.38	<i>In situ</i> decontamination of tritium adsorbed on secondary electron multiplier and its application	177
II.39	Seasonal and regional variation of environmental tritium level	179
II.40	A background level survey for tritium over whole Japan	181
II.41	Tritium content of environmental waters from the Toyama region, Japan	183
II.42	Environmental tritium considerations in view of design and operation of fusion facilities — data base development and methods —	185
II.43	Distribution of tritiated species in the atmosphere	187
II.44	Ecological behaviors of tritium in the vicinity of nuclear facilities in Japan	189
II.45	Variations of tritium concentration in precipitation, river water and sea water around Tokai	191

II.46	Measurement of atmospheric tritium	193
II.47	Tritium in the environment around the nuclear plants in Fukui prefecture	195
II.48	Tritium content of rain and river water in Aichi prefecture	197
II.49	Control and measurement of tritium at an institution for the usage of radioisotopes	199
II.50	Biological effects of tritium	201
II.51	Genetic effects of tritium	203
II.52	Somatic effects of tritium	205
II.53	Effect of tritium on the cells and their constituents	207
II.54	Effects of tritium on DNA	209
II.55	Oncogenic transformation of golden hamster embryo (GHE) cells treated with tritiated water	210
II.56	Hematopoietic disorders by tritium compounds in men	212
II.57	The effect of tritiated water on hematopoietic tissue	214
II.58	Effects of tritium on the induction of recessive visible mutations in primordial germ-cells of silkworm embryos: The nature of β -ray-induced mutants	216
II.59	Microdosimetry of tritium beta-rays — Influence of reference radiation on RBE of tritium beta-rays	218
II.60	Biological effects and RBE of tritium water in cultured mammalian cells	220
II.61	Effects of tritiated water on the induction of somatic mutations in higher plants	222
II.62	Uptake of tritiated compounds into male germ-cells and dose estimation of tritium	224
II.63	Incorporation, distribution and molecular behavior of tritium in higher organisms from tritium gas and tritiated water	226
II.64	Tritium transport in the aquatic food chain under the exponentially decreasing level of environmental tritium	228
II.65	Development of an <i>in vivo</i> germinal mutation detection system in mice	230
II.66	Effect of $^3\text{H}\text{OH}$ exposure on gene activity of <i>E. coli</i> plasmid	232
II.67	The system of the treatment of animals with tritiated water	234
II.68	Tritium-induced chromosomal and DNA damages, and their modification	236
II.69	Effects of tritiated water on the organization of chromatin	237
II.70	Effects of tritium beta-rays on DNA	239
II.71	Analysis of <i>tonB-trp</i> deletion mutations induced by X-rays and	

	tritiated water in <i>E. coli</i>	241
II.72	Effects of tritium on DNA: Strand breaks	243
II.73	Development of the monitoring system for human exposure to tritium: Chromosome aberrations human G ₀ lymphocytes exposed to HTO	245
II.74	Effects of HTO on yeast cells	247
II.75	Acute effect of tritiated water (HTO) in mice: Patho- hematological observations	249
II.76	Dose-rate effect on the tritium- β -induced alanine radical formation at -196°C	250
II.77	Metabolism of tritium incorporated into suckling mice	252
II.78	Somatic effects of tritium	254

Group III : Fundamentals of Reactor Plasma Control

III. 1	Fundamental researches on fusion plasma control (Coordinating Committee)	257
III. 2	Beam probe-laser spectroscopy for measurements of impurities in high temperature plasmas	259
III. 3	Development of Schottky diode detector/mixers for high temperature plasma diagnostics	261
III. 4	Development of diagnostic techniques of inertial confinement fusion plasma by using thermonuclear reaction particles	263
III. 5	Development of a D ₂ O submillimeter laser pumped by an injection-locked TEA CO ₂ laser	265
III. 6	Development of fundamental techniques on charged beam drivers for inertial confinement fusion	267
III. 7	Some characteristics of heavy ion beam produced by collective acceleration	271
III. 8	Growth of large size KDP single crystal for high power harmonic generation in laser nuclear fusion	273
III. 9	Theoretical research on fundamentals of pellet design	275
III.10	Comparison of HF chemical laser and KrF rare-gas-halide laser performance	277
III.11	Development of polymer pellets for ICF fusion targets	279
III.12	Antennas and related problems for wave heating of plasmas	281
III.13	Selfmodulational instability in RF heated plasma	283
III.14	Development of negative hydrogen ion source	285
III.15	New antenna for wave heating	287
III.16	Compact and high β toroidal systems	289

III.17	Basic parameters for the design of toroidal device with helical magnetic axis	291
III.18	Centralized development of computer simulation codes in nuclear fusion research	293
III.19	Electrostatic energy conversion from charged particles	295

Group IV : Technology of Superconducting Magnet

IV. 1	Basic aspects of R & D of superconducting magnet technology (The fourth group)	297
IV. 2	Superconducting A15 compound conductors	299
IV. 3	Improvement of high-field performance of <i>in situ</i> Nb ₃ Sn wires	301
IV. 4	Superconducting properties of Mo-B, Mo-P and Pd-Zr amorphous alloys	303
IV. 5	Evaluation of fracture toughness of cryogenic structural steels for superconducting magnet in fusion reactor	305
IV. 6	Ternary superconductors with high critical magnetic field	307
IV. 7	Pulse shielded superconductive magnetic energy storage	309
IV. 8	Electromagnetic properties of multifilamentary composite superconductors under fast ramp-rate magnetic fields	310
IV. 9	High overall current density and high magnetic field superconducting magnets cooled with pressurized superfluid helium .	312
IV.10	Development of technique for detection and analysis of acoustic emission signals from superconducting magnets	314
IV.11	Production of A15 type superconducting filament by the method of glass-coated melt spinning	316
IV.12	Microstructures of A15 type superconductors and their influence to pinning force	318
IV.13	Reactor irradiation of superconducting magnet materials at cryogenic temperatures	320
IV.14	Steady and unsteady boiling phenomena in liquid helium I	322
IV.15	Development of V ₃ Si superconductor with higher transition temperature	324
IV.16	Dynamics of nonequilibrium superconducting state induced by high energy radiation	326
IV.17	Performance study on superconducting magnet materials under thermonuclear fusion conditions — Cryogenic material and radiation effects —	328
IV.18	Static and dynamic Fracture toughness testing of materials	

	for superconducting magnet	330
IV.19	Forced flow cooling of a pulsed superconducting magnet and its control	332
IV.20	Development of Nb ₃ Sn jelly-roll type superconducting wires by internal diffusion <i>in situ</i> method	334
IV.21	Syntheses of quasi-stable A15 type superconductors and chevre \acute{e} l type superconductors, and improvement of the critical current density	336
IV.22	Electromagnetic behavior of a new superconducting composite wire ..	338
IV.23	Dynamic performance of the pool boiling in liquid helium	340
IV.24	Electrical insulations used in superconducting magnets for a large fusion device	342

Group V : Fusion Reactor Blanket Engineering

V. 1	Fusion reactor blanket engineering	345
V. 2	Basic experiments on tritium breeding and neutron multiplication ..	347
V. 3	Dosimetry experiments for fusion reactor neutronics researches	349
V. 4	Measurement of neutron activation crosssection of fusion reactor materials at 14.6 MeV	351
V. 5	Duct streaming of high-energy neutrons	353
V. 6	Measurements of secondary neutron data for fusion materials and development of related transport code system	355
V. 7	14 MeV (n,p) reaction using a position sensitive counter-telescope with large angular acceptance	357
V. 8	Cooling of tandem mirror fusion reactor components by water flow in narrow channel	359
V. 9	Thermal behaviors of a gas-cooled channel with non-uniform and transient heat generation	361
V.10	Characteristics of studies on heat transfer and pressure drop of helium-lithium annular-mist flow under a transversal magnetic field	363
V.11	Sodium mist cooling for a hot surface in a fusion reactor	365
V.12	Gas cooling heat transfer coupled with radiation and convection in a duct with non-uniform high wall heat flux	366
V.13	Strength of blanket materials under the influence of heavy neutron irradiation and high temperature	368
V.14	Pressure drop and heat transfer of lithium flow under transverse magnetic field	370

V.15	Fracture strength in elevated temperature of the blanket materials of fusion reactor	372
V.16	Radiation damage studies on fusion materials and instrumentations by using rotating target neutron source II	374

Group VI : Design and Evaluation of Fusion Reactor

VI. 1	Fundamentals of fusion reactor design and assessment (the sixth-group sohkatsu-han)	377
VI. 2	Magnetically confined advanced fuel fusion reactor	381
VI. 3	Science assessment of fusion power plant (1) Resource economy assessment	383
VI. 4	Development of new methods for fusion theory	390
VI. 5	Materials data base as an interface between materials developments and fusion reactor designs	393
