

CONTENTS

Preface

Organization

Research Summaries

Group I: Reactor Materials and Plasma-wall Interactions

I. 1	Fusion reactor materials and plasma-wall interactions	1
I. 2	The effects of heavy irradiations on the ferritic stainless steels	3
I. 3	The effects of heavy irradiations on the ferritic stainless steels – Simulation irradiation studies	5
I. 4	– Radiation-induced segregation and dual irradiation behavior in stainless steels	7
I. 5	– Damage structural behaviour by electron irradiation of Mn-Cr austenitic stainless steels	9
I. 6	– The effect of ion irradiation on microstructure of ferritic stainless steels	11
I. 7	– Heavy irradiation effects of the ferritic/martensitic stainless steels (Effects of applied stress on the microstructure evolution)	13
I. 8	– Effect of cascade damage on the formation of defect clusters	15
I. 9	– Instrumented charpy impact tests for austenitic and ferritic steels	17
I.10	– Damage recovery in electron-irradiated Fe-Ni-Cr alloys	18
I.11	– Behavior of hydrogen and helium	19
I.12	– Fundamental processes of damage evolution in neutron irradiated metals	21
I.13	– The change of microstructure of JFMS by different heat treatment	23
I.14	– Change in microstructure and toughness of ferritic-martensitic stainless steel during long-term aging	25
I.15	– The effects of alloying elements on the void-swelling in heavily irradiated materials (Microchemical segregation in 304 stainless steels during electron irradiation)	27
I.16	Irradiation effects on the mechanical properties of materials	29
I.17	Irradiation effects on the mechanical properties of materials – Tensile strength property of miniaturized specimen of type 316 austenitic stainless steel and helium injection effect on it	31
I.18	– Effect of irradiation on strength of ferritic steels	33
I.19	– High cycle fatigue properties of the type 316 stainless steel	35
I.20	– Correlation between microstructure evolution and mechanical property change	37
I.21	– Impact strength of ferritic steel using small test piece	39
I.22	– Application of miniature sample testings to irradiated materials	41
I.23	– Editing of a fusion reactor materials database to induce a phenomenological relation on several mechanical properties	43
I.24	– Irradiation creep of 316 stainless steel	44
I.25	Defect structures and mechanical properties of materials irradiated with fusion neutrons	

	from RTNS-II	46
I.26	Effect of proton irradiation on the embrittlement of HT-9 steel	48
I.27	Mechanical properties and irradiation effects on ferritic steels for fusion reactor walls	50
I.28	Development of high purity aluminum alloys for a fusion reactor material with low radio activity	52
I.29	Particle and energy balance in hydrogen recycling in fusion reactor materials	54
I.30	Particle and energy balance in hydrogen recycling in fusion reactor materials – Contribution of the surface on the synergistic effects in plasma-wall interaction	56
I.31	– Synergistic effect on hydrogen trapping and detrapping	58
I.32	– Isotope effect for desorption of hydrogen, deuterium and tritium implanted into pyrolytic graphite	60
I.33	– Surface effect on tritium permeation through SUS-316 stainless steel	62
I.34	– Thermal desorption of deuterium and helium from ion irradiated graphite	64
I.35	– A few collision approach of near-threshold ion-induced desorption	66
I.36	– Plasma surface interaction in low-Z compound materials with hydrogen isotope ions	68
I.37	Retention of hydrogen implanted into SiC and TiC crystals	71
I.38	Analytical methods for material transport phenomena between solid surface layers and gases during hydrogen recycling process	73
I.39	Analysis of the plasma-driven hydrogen permeation of the first wall in fusion devices	75
I.40	Plasma wall interactions of long burn fusion devices	77
I.41	Hydrogen embrittlement of SUS 316 (AISI 316) austenitic stainless steel weldments	79
I.42	Development and evaluation of ceramic materials for fusion reactors	81
I.43	Development and evaluation of ceramic materials for fusion reactors – Thermal shock testing of dense SiC by water-quenching	82
I.44	– High temperature properties of C/C composite	84
I.45	– Thermal conductivity of reaction sintered Si_3N_4 at high temperatures	86
I.46	– Radiation damage in oxide and carbide ceramics	88
I.47	– Surface erosion of substoichiometric titanium carbide under high energy $^4\text{He}^+$ ion bombardment	90
I.48	– Preparation and properties of chemically vapor deposited B_4C	92
I.49	– Effects of neutron irradiation on SiC fiber	94
I.50	– Radiation behaviour of low-Z ceramics	96
I.51	– Characterization of Ar^+ -ion irradiated alumina coatings	98
I.52	Diffusion bonding between metals and ceramics under high pressure	100
I.53	Thermal fatigue test of low-Z coating material	101
I.54	Bonding of ceramics to metal surfaces using high-pressure bonding process	103
I.55	Fast neutron and ion irradiation effects on polymers and organic composites for fusion reactors	105

Group II: Science, Technology and Biological Effects of Tritium

II. 1	Cooperative works on fundamental works on tritium technology, behavior of tritium in environment, and biological effects of tritium	107
II. 2	Study group meeting: impairment of plasma diagnostic devices due to tritium and obviation techniques	109
II. 3	The development of new techniques for measurement, storage and transfer of high activity tritium	111
II. 4	Seasonal and regional variation of environmental tritium level	113
II. 5	Microscopic behavior of tritium in ceramics	115
II. 6	Tritium high detection sensitivity gas monitor	117
II. 7	Tritium pellet injection in a toroidal plasma	119
II. 8	Tritium storage in and release out of spongy titanium	121
II. 9	Detection and separation of hydrogen isotopes with drift tube technique	123
II.10	Partial pressure measurement of tritium oxide by infrared spectroscopy	125
II.11	High pressure DT fill and non-destructive fuel assay for laser fusion target	127
II.12	Contamination of ionization chamber due to exposure to tritium	129
II.13	Hydrogen isotope separation by host-guest chemistry	131
II.14	Laser isotope separation of tritium	133
II.15	Isotope fractionations by chromatographic techniques	135
II.16	Separation of hydrogen isotopes by permeation through metal plate prepared by powder metallurgical technique	137
II.17	Hydrogen isotope effects at desorption of water from desiccants-III	139
II.18	Chemical effects of β -decay in tritium labelled cytosine in oxygenated aqueous solution	141
II.19	Tritium permeation through rubber under low partial pressure	143
II.20	Effect of γ -irradiation on gas permeability of nitrile rubber	145
II.21	Permeation of hydrogen isotopes and effect of ion bombardment in Johnson-Matthew iron	147
II.22	Hydrogen depth profiles in reactor materials damaged by He-ion irradiation	149
II.23	Distribution of tritium in pure aluminum and an aluminum-magnesium-silicon alloy	151
II.24	Synthesis and properties of lithium double oxides from organic metal compounds	153
II.25	Tritium recovery from neutron irradiated lithium oxide pellets	155
II.26	Tritium breeding and thermal properties of LiPb material for fusion reactor blankets	157
II.27	<i>In-situ</i> tritium release from CTR solid blanket materials under neutron irradiation at high temperatures	159
II.28	Absorption breakthrough of hydrogen isotopes in inert gas mixture with zirconium-nickel alloy particle bed	161
II.29	Permeation of hydrogen through iron-coated niobium membrane	163
II.30	Plasma driven permeation using RF-discharge in a pyrex tube	165

II.31	Simulation of air detritiation operations by bench-scale experiment and computer modeling	167
II.32	Tritium detection using electret dosimeter	169
II.33	Tritium measurement by photon counting	171
II.34	Calorimetric measurement of tritium in high-activity	173
II.35	An explanation of the tritium memory-effect	175
II.36	Characteristics of cryosorption pumping of hydrogen isotopes on synthetic zeolite and activated carbons	177
II.37	Safety confinement of tritium	179
II.38	Attachment of membrane separator for removal of radon to ionization chamber installed for tritium stack monitor	181
II.39	Tritium content of rain and river water in Aichi Prefecture	183
II.40	Tritium in the environment around and an institution for the usage of radioisotopes	185
II.41	Tritium content of environmental waters from the Toyama region, Japan	187
II.42	Tritium concentration in environmental water and pine needles in the vicinity of nuclear power plants in Fukui Prefecture	189
II.43	Tritium measurement by helium isotopic analysis	191
II.44	Measurements of tritium concentrations in the atmosphere and precipitations	193
II.45	Environmental tritium considerations in view of design and operation of fusion facilities – Database development and methods –	195
II.46	Environmental tritium in the vicinity of nuclear facilities in Japan	197
II.47	Observation and calculation of washout deposition of tritiated vapor	199
II.48	Tritium concentrations in atmosphere, drinking water, river water and rain water around Tokai	201
II.49	Variations of tritium concentration in the atmosphere and lake waters	203
II.50	Tritium level in tap water and in urine in community population	205
II.51	Biological effects of tritium (Summary)	207
II.52	Genetic effects of tritium	209
II.53	Somatic effects of tritium	211
II.54	Oncogenic transformation of golden hamster embryo (GHE) cells exposed to tritiated water (HTO)	213
II.55	Somatic effects of tritium	215
II.56	Mutagenicity of tritium water and its RBE in mouse lymphoma L5178Y cells	217
II.57	Carcinogenicity of tritiated water (HTO) in mice (An interim report)	219
II.58	The effect of tritiated water on hematopoietic tissue	221
II.59	Development of the monitoring system for human exposure to tritium: chromosome aberrations in human G ₀ lymphocytes exposed to HTO	223
II.60	Mechanism of hematopoietic disorders by tritium compounds in men	225

II.61	Intake of tritiated water into mouse gonad cells	227
II.62	The system of the safety handling of tritiated water in biological experiments	230
II.63	Expiratory air monitor	232
II.64	Uptake studies of tritium into animals	234
II.65	Effects of tritium beta-rays on DNA	236
II.66	Microdosimetry of tritium beta rays – Mean dose in cells stored in tritiated water	238
II.67	The free radical-induced dimemerization of enzymes in aqueous solutions	239
II.68	Mutational specificity of tritium mutagenesis in <i>E. coli</i>	241
II.69	Effects of tritium on chromosomes	243
II.70	Genetic effects of tritium in the somatic and germ cells of mice	244
II.71	Effects of tritiated water on the organization of chromatin alkaline elution assay and effects of H ₂ O ₂	246
II.72	Oxidation of tritium gas in the body	248
II.73	Cell death induced by tritiated water in mouse intestine	250
II.74	Development of tritium simulator – Low dose and low dose rate irradiation apparatus	252
II.75	Cellular effects of HTO on yeast cells	254
II.76	Effects of tritiated water on the DNA of plasmid PBR 322	256
II.77	Incorporation of tritium into the biomolecules in the organs of newborn mice and evaluation of their internal absorbed dose	258
II.78	Tritium metabolism and estimation of accumulated dose in newborn mice	260
II.79	Effect of tritiated water on the development of fertilized eggs of mice	262
II.80	Effect of tritiated water on growth of <i>E. coli</i> NG30 and a specific oxidative species produced in tritiated water	264

Group III: Fundamentals of Reactor Plasma Control

III. 1	Fundamental researches on fusion plasma control (Coordinating committee)	267
III. 2	Beam probe-laser spectroscopy for measurements of impurities in high temperature plasmas	269
III. 3	Development of fundamental techniques on charged beam drivers for inertial confinement fusion	271
III. 4	Antennas and related problems for wave heating in plasmas	275
III. 5	Compact and high β toroidal systems	277
III. 6	Development of schottky diode detector/mixers for high temperature plasma diagnostics	279
III. 7	Optical measurement of high- β plasma with a high temporal- and spatial resolution	281
III. 8	Development of a D ₂ O submillimeter laser for ion temperature measurements of high temperature plasmas	283
III. 9	Time-resolved observations of electron energy in REB-excited gases	285
III.10	Development of magnetic pellet injector and plasma imaging diagnostics for inertial	

fusion	287
III.11 Theoretical research on fundamentals of pellet design	289
III.12 Improvement of the operational performance for the E-beam excited HF and KrF lasers	291
III.13 Development of high frequency gyrotrons and gyro-peniotrons	293
III.14 Production and controlling of high energy particles in wave heating of plasma	295
III.15 Combination heating and confinement control in fusion plasmas	297
III.16 New Antenna for wave heating	299
III.17 Formation of tandem potential and thermal barrier	301
III.18 Improvement of life time of FRC plasma by the use of translation method	303
III.19 Cooperative development of computer simulation codes for nuclear fusion plasma research	305
III.20 Design bases for helical axis toroidal device	307

Group IV: Technology of Superconducting Magnet

IV. 1 Basic aspects of R & D of superconducting magnet technology (The fourth group)	309
IV. 2 Superconducting A15 compound conductors	311
IV. 3 Dynamic performance of the pool boiling heat transfer to liquid helium4	313
IV. 4 Basic electromagnetic properties of superconductors	315
IV. 5 Application of composite theory to structural analysis of superconducting magnets	317
IV. 6 Acoustic emission and disturbances in superconducting magnet	319
IV. 7 Generation of chevrel-phase superconductors with ultrahigh critical magnetic field	321
IV. 8 Effects of reactor irradiation on insulating materials for superconducting magnet	323
IV. 9 Structural materials for superconducting magnets in fusion reactor (Fracture toughness and stress-strain behavior at cryogenic temperature)	325
IV.10 Forced flow cooling of a pulsed superconducting magnet and its control	327
IV.11 Performance study on superconducting magnet materials under thermonuclear fusion conditions – Tests and evaluation for near term fusion machine –	329
IV.12 Development of Nb ₃ Sn superconducting wires by <i>in-situ</i> method	331
IV.13 Cooling system of superconducting magnets with superfluid helium	333
IV.14 Quench phenomena and protections in superconductivity	335
IV.15 Reinforced composite Nb ₃ Sn multifilamentary wires and their stress effect	337
IV.16 Microstructure of A15 type superconductors and their influence to pinning force	339
IV.17 Electrical insulations used in superconducting magnets for a large fusion device	341
IV.18 A.C. losses and stability of a fine NbTi multifilamentary composite conductor	343

Group V: Fusion Reactor Blanket Engineering

V. 1 Fusion reactor blanket engineering	345
V. 2 Basic experiments on tritium breeding and neutron multiplication	347

V. 3	Developments of fusion neutron dosimetry techniques	351
V. 4	Neutron induced gamma-ray production from fusion reactor materials	353
V. 5	Decreasing of induced activity of a fusion reactor and environmental radiation	355
V. 6	Measurement of secondary neutron data (DDX) and analysis of knock-on atom spectra for fusion reactor materials	357
V. 7	Sodium mist cooling for a hot surface in a fusion reactor	359
V. 8	Cooling of fusion reactor components by water flow in narrow channel	361
V. 9	Lifetime evaluation of a first wall for a fusion reactor	363
V.10	Gas cooling heat transfer in a coolant duct of first wall with non-uniform and/or unsteady high heat flux	366
V.11	Gas cooling heat transfer in a coolant duct of first wall with non-uniform and/or unsteady high heat flux – Non-uniform and steady heat transfer in a non-circular cross section duct	367
V.12	Thermal behaviors of a gas-cooled channel with non-uniform and transient heat generation	369
V.13	Strength of blanket materials under the influence of heavy neutron irradiation and high temperature	371
V.14	MHD effects of liquid lithium flow under transverse magnetic field – Pressure drop in square tube and temperature fluctuation in annular channel –	373
V.15	Fracture strength in elevated temperature of the blanket materials of fusion reactor	377
V.16	Radiation damage studies on fusion materials and other utilizations by using rotating target neutron source II	379

Group VI: Design and Evaluation of Fusion Reactor

VI. 1	Fundamentals of fusion reactor design and assessment (Coordinating committee)	381
VI. 2	Magnetically confined advanced fuel fusion reactor	383
VI. 3	Science assessment of nuclear fusion reactor	385
VI. 4	Development of new methods for fusion theory	387
VI. 5	Fusion reactor materials database as an interface between reactor design and materials development	389
VI. 6	Neutronics optimization for fusion reactor blanket/shield	391
VI. 7	Conceptual design of tandem mirror fusion power reactor	393
VI. 8	Evaluation of structural strength of fusion reactor first wall	395
