

CONTENTS

Preface	
Organization	
Research Summaries	

Group I: Reactor Materials and Plasma-Wall Interactions

I.1	Fusion reactor materials and plasma-wall interactions	1
I.2	Correlations among radiation effects in different irradiation environment and fusion reactor materials development	2
I.3	Overall evaluation study for graphites as fusion first wall material	4
I.4	Characteristics of radiation damage in ceramics	8

Group II: Environmental and Biological Effects of Tritium

II.1	The tritium studies in the Japanese fusion program (the steering committee)	11
II.2	Variations of tritium in the environments including biological samples and their interpretation through the analysis	13
II.3	Tritium metabolism and biological monitoring	15
II.4	Dose-rate effect of tritiated water on biological system and its relationship to relative biological effectiveness	17
II.5	Fundamental studies on tritium technology fuel cycle, waste management and safety confinement	19

Group III: Fundamentals of Reactor Plasma Control

III.1	Fundamental research on fusion plasma control (coordinating committee)	21
III.2	Diagnostic techniques for high temperature and high density plasma, and improvement of implosion efficiency	23
III.3	Transport and control on RF-heated and current drive plasmas	26
III.4	Spatial structures related to optimization of plasma confinement	29
III.5	Plasma confinement of a helical axis stellarator (Tohoku University HELIAC)	31
III.6	Computer modelling of plasma dynamics	33

Group IV: Superconducting Magnets

IV.1	Basic research of superconducting magnets for nuclear fusion	35
IV.2	Development and evaluation of cryogenic structural and insulating materials for fusion magnets	37
IV.3	Improvement and measurements of advanced and practical superconductors for nuclear fusion	39

IV.4	Electromagnetic structural mechanics and cryomechanics for fusion reactor superconducting magnet.....	41
IV.5	Cryostabilization and quench protection of large scale superconducting magnets for fusion experimental devices	43

Group V: Fusion Reactor Blanket Engineering

V.1	Promotion of fusion reactor blanket engineering	45
V.2	Thermomechanical system of high heat flux wall of high power density fusion reactor	47
V.3	Basic studies on breeding and recovery of tritium in CTR blanket Part 1 Breeding material production, recovery, separation and storage of tritium	50
V.4	Basic studies on breeding and recovery of tritium in CTR blanket Part 2 Evaluation of tritium breeding on lithium blanket	52

Group VI: Design and Evaluation of Fusion Reactor

VI.1	Design and evaluation of fusion reactors (steering committee)	55
VI.2	System analysis of reactor components	56
VI.3	Evaluations and design of a fusion reactor	58
VI.4	Plasma production and conditioning technology in Heliotron-E, Gamma-10, Gekko XII and trium facilities	61
