1. Background	5
2. Brief Discussion of the Principal Data Sources	5
2.1. General Remarks	5
2.2. The Opacity Project	6
2.3. The CIV 3 Code	6
2.4. Other Multiconfiguration Calculations and Calculations of Forbidden Lines	6
2.5. Emission Experiments	8
2.6. Lifetime Measurements	8
3. Data Assessment	9
3.1. Main Criteria	9
3.2. The Critical Factors for the Determination of Atomic Transition Probabilities	9
3.3. Utilization of Systematic Trends	10
4. Selection Procedure and Assignment of Uncertainties	10
5. Arrangement of the Tables	12
6. Key to Abbreviations and Symbols Used in the Tables	16
7. Future Plans and Acknowledgements	17
8. References	17

List of Tables

1. Comparisons of experimental and theoretical results for the line strengths of intersystem lines	7
2. Literature references for O I since 1966	11
3. Conversion factors	16

Spectrum

Carbon	C I	21
	C II	69
	C III	92
	C IV	125
	C V	144
	C VI	155
Nitrogen	N I	157
	N II	194
	N III	223
	N IV	267
	N V	287
	N VI	315
	N VII	321
Oxygen	O I	335
	O II	365
	O III	396
	O IV	431
	O V	483
	O VI	499
	O VII	512
	O VIII	522

List of Figures

1. Comparison of the C I data selected for this volume with those critically compiled in the NBS tables of 1966 ¹	13
2. Comparison of the N I data selected for this volume with those critically compiled in the earlier NBS tables of 1966 ¹	13
3. Comparison of the O I data selected for this volume with those critically compiled in the earlier NBS tables of 1966 ¹	14
Carbon	
C I	
1. Partial energy level diagram of C I	27
2. Comparison of the line strengths from the Opacity Project and from the CIV 3 code calculations for all multiplet values of C I where the two calculations overlap ...	27
3. Comparison of the line strengths from the Opacity Project and from the CIV 3 code calculations for all multiplet values of C I where the two calculations overlap, but omitting all multiplets starting or ending in ¹ P ^o or ³ P ^o terms of configurations with excited <i>s</i> (<i>n</i> ≥ 4) and <i>d</i> electrons	28
C II	
1. The beam-foil lifetimes τ of Reistad <i>et al.</i> , which are ANDC corrected, are compared with lifetime data derived from the OP calculations of Yu Yan <i>et al.</i> ..	73
Nitrogen	
N I	
1. Comparison of emission data with the CIV 3 calculations of Hibbert <i>et al.</i> ...	162
N II	
1. Comparison of the OP multiplet data by Luo and Pradhan with the results of the CIV 3 calculations by Bell <i>et al.</i>	198
2. Comparison of the lifetime data by Baudinet-Robinet <i>et al.</i> , Dumont <i>et al.</i> , and Bastin <i>et al.</i> with the selected theoretical data.....	199
Oxygen	
O I	
1. Comparison of the OP multiplet data by Butler and Zeippen with the CIV 3 results of Hibbert <i>et al.</i>	339
2. Comparison of the experimental log <i>gf</i> data with the selected theoretical results.	339
3. Comparison of the lifetime results by Bischel <i>et al.</i> and Kröll <i>et al.</i> with the OP data by Butler and Zeippen	340
O III	
1. Comparison of the multiplet line strengths <i>S</i> from the OP calculations of Luo <i>et al.</i> with other advanced theoretical results by Aggarwal and Hibbert, Nussbaumer and Storey, Froese Fischer and Saha, and Weiss.	402
2. Comparison of measured lifetimes τ (in <i>ns</i>) versus lifetimes derived from the selected theoretical data	402
