

CONTENTS

Introduction	1
Chapter I. Equations and problems of narrow beam mechanics	
§1. Asymptotic solutions of narrow beam type for partial differential equations with small parameter	7
§2. Systems of canonical equations	12
§3. Inequalities of the Garding type	16
§4. Approximate solutions of the canonical system	18
§5. Generalized Cauchy problem and nonstationary transport equation	25
Chapter II. Hamiltonian formalism of narrow beams	
§1. Model problem	31
§2. Auxiliary facts from symplectic geometry of the phase space	37
§3. Lagrangian manifolds with real germ	39
§4. Phase and action on Lagrangian manifolds with real germ	46
§5. Phase reconstruction	51
§6. Lagrangian manifolds with complex germ	55
§7. Dissipation conditions	58
§8. Action on Lagrangian manifolds with complex germ	60
§9. Canonical transformations of Lagrangian manifolds with complex germ	62
§10. Approximate complex solutions of the nonstationary Hamilton-Jacobi equation	64
Chapter III. Approximate solutions of the nonstationary transport equation	
§1. Approximate real solutions of the transport equation	69
§2. Approximate complex solutions of the nonstationary transport equation	73

§3. Creation and annihilation operators for the generalized nonstationary transport equation	82
§4. Creation and annihilation operators. General case ..	91
§5. The spaces of functions $S([\Lambda^k, r^n/T\Lambda^k])$	105
§6. Generalized transport equation with nonzero right-hand side	107
Chapter IV. Stationary Hamilton-Jacobi and transport equations	
§1. Canonical system of stationary equations	111
§2. Invariant Lagrangian manifolds with complex germ	113
§3. Approximate solutions of the stationary Hamilton- Jacobi equation and the transport equation	117
§4. The generalized Cauchy problem for stationary Hamilton-Jacobi equations	123
§5. The Cauchy problem in the plane for transport equations	134
§6. Generalized stationary transport equation	136
§7. Examples	141
§8. Generalized eigenfunctions of the Helmholtz operator	144
Chapter V. Complex Hamiltonian formalism of compact (cyclic) beams	
§1. Setting the problem	155
§2. Invariant zero-dimensional Lagrangian manifolds with complex germ	160
§3. Approximate solutions of the generalized transport equation concentrated in the neighborhood of a point	166
§4. Family of closed curves with complex germ	171
§5. Functions on a family of closed curves with complex germ; creation operators	176
§6. Invariant closed curves with complex germ	184
§7. Approximate cyclic solutions of the stationary Hamilton-Jacobi equation	192
§8. Approximate solutions of the generalized transport equation	196
Chapter VI. Canonical operators on Lagrangian manifolds with complex germ and their applica- tions to spectral problems of quantum mechanics	
§1. Invariant closed curves with complex germ in systems with one cyclic variable	203

§2. Semiclassical spectral series for Schrödinger and Klein-Gordon operators in electromagnetic fields with axial symmetry corresponding to relative equilibrium positions	207
§3. Construction of the canonical operator on Lagrangian manifolds with complex germ	212
§4. Canonical operators and polynomial beams over isotropic manifolds	219
§5. Example	227
§6. Table of asymptotic spectral series	243
References	251
Appendix A	
Complex germ generated by a linear connection	257
Appendix B	
Asymptotic solutions with pure imaginary phase and the tunnel equation	267
Appendix C Analytic asymptotics of oscillatory decreasing type (heuristic considerations)	
	293
