I. NONLINEAR PROPAGATION OF STRONG LASER PULSES IN CHALCOGENIDE GLASS FILMS

*by V. CHUMASH AND I. COJOCARU (CHISINAU, MOLDOVA),
E. FAZIO, F. MICHELOTTI AND M. BERTOLOTTI (ROME, ITALY)*

§ 1. INTRODUCTION	3
§ 2. NONLINEAR TRANSMISSION OF CW LASER RADIATION THROUGH THIN ChG FILMS	4
§ 3. NONLINEAR ABSORPTION OF LASER PULSES IN ChG	11
§ 4. OPTICAL HYSTERESIS AND NONLINEAR ABSORPTION OF LASER PULSES IN ChG	19
§ 5. MODEL OF NONLINEAR LIGHT ABSORPTION INTO A HIGHLY EXCITED NONCRYSTALLINE SEMICONDUCTOR: PHENOMENOLOGICAL APPROACH	27
5.1. No participation of local acoustic phonons ($\gamma = 0$)	30
5.1.1. $n_a \approx n_a^0$; $n = n_0 \ll 1$	30
5.1.2. $n > n_0$	30
5.2. Participation of local acoustic phonons ($\gamma \neq 0$)	31
§ 6. REFRACTIVE INDEX CHANGES OF CHALCOGENIDE GLASSES	35
§ 7. CONCLUSIONS	43
ACKNOWLEDGEMENT	44
REFERENCES	44

II. QUANTUM PHENOMENA IN OPTICAL INTERFEROMETRY

by P. HARIHARAN (LINDFIELD, AUSTRALIA) AND B.C. SANDERS (NORTH RYDE, AUSTRALIA)

§ 1. INTRODUCTION	51
1.1. Quantum effects	51
1.2. Complementarity	51
1.3. Second-order coherence	52
1.4. Nonclassical states of light	52
1.5. Fourth-order coherence	53
1.6. Entangled states	53
1.7. Beam-splitting and tunneling	54
1.8. Quantum limits	54
§ 2. OPTICAL SOURCES	54
2.1. Quantum description of radiation	55
2.2. Independent sources	58

2.3. Two-atom sources	58
2.4. Sources of nonclassical light	59
2.5. Single-photon states	59
2.5.1. Atomic cascade	59
2.5.2. Parametric down-conversion	60
2.6. The beam splitter	60
2.7. Squeezed states of light	62
§ 3. SECOND-ORDER INTERFERENCE	65
3.1. Interference at the “single-photon” level	65
3.2. Interference with single-photon states	66
3.3. Interference with independent sources	67
3.4. Interference in the time domain	70
3.5. Superposition states	72
§ 4. THE GEOMETRIC PHASE	73
4.1. The geometric phase in optics	73
4.2. Observations at the single-photon level	74
4.3. Observations with single-photon states	76
§ 5. FOURTH-ORDER INTERFERENCE	78
5.1. Nonclassical fourth-order interference	79
5.2. Interference in separated interferometers	86
5.3. The geometric phase	89
5.4. Tests of quantum theory	90
§ 6. TWO-PHOTON INTERFEROMETRY	91
6.1. Entangled states and Bell’s inequality	92
6.2. Interferometric tests of Bell’s inequality	94
6.3. Other tests of local realism	99
6.4. Two-photon interference	100
6.5. Two-photon tests of Bell’s inequality	106
§ 7. COMPLEMENTARITY	108
7.1. Quantum-nondemolition measurements	108
7.2. Delayed-choice experiments	109
7.3. The quantum eraser	110
7.4. Single-photon tunneling	112
7.4.1. Tunneling time	113
7.4.2. Dispersion cancellation	113
7.4.3. Measurements of tunneling time	114
7.5. Interaction-free measurements	115
§ 8. QUANTUM LIMITS TO INTERFEROMETRY	117
8.1. Number–phase uncertainty relation	117
8.2. The standard quantum limit	119
8.3. Interferometry below the SQL	120
8.4. Interferometers using active elements	121
§ 9. CONCLUSIONS	122
REFERENCES	123

III. SUPER-RESOLUTION BY DATA INVERSION

by M. BERTERO (GENOVA, ITALY) AND C. DE MOL (BRUSSELS, BELGIUM)

§ 1. INTRODUCTION	131
§ 2. RESOLUTION LIMITS AND BANDWIDTH	134
2.1. The Rayleigh resolution limit	134
2.2. Band of an optical system and sampling theorems	135
2.3. Deblurring and super-resolution	139
§ 3. LINEAR INVERSION METHODS AND FILTERING	142
3.1. The overall impulse response	142
3.2. Optimal filtering for convolution equations	144
3.3. Filtered singular-system expansions for compact operators	149
§ 4. OUT-OF-BAND EXTRAPOLATION	154
§ 5. CONFOCAL MICROSCOPY	162
§ 6. INVERSE DIFFRACTION AND NEAR-FIELD IMAGING	168
ACKNOWLEDGEMENTS	172
APPENDIX A	173
APPENDIX B	174
REFERENCES	176

IV. RADIATIVE TRANSFER: NEW ASPECTS OF THE OLD THEORY

by Yu.A. KRAVTSOV AND L.A. APRESYAN (MOSCOW, RUSSIAN FEDERATION)

§ 1. INTRODUCTION	181
1.1. Classical radiative transfer theory	181
1.2. RTE and basic equations of statistical-wave theory	183
1.3. Diffraction content of radiative transport equation. Nonclassical radiometry	186
1.4. Purpose and content of the review	188
§ 2. RADIATIVE TRANSFER IN FREE SPACE	188
2.1. Radiometry and coherence	188
2.1.1. Radiometric description of radiation in free space	189
2.1.2. Radiance and the correlation function of the wave field	190
2.1.3. Radiance as the spectrum of quasi-uniform fluctuations	191
2.1.4. Wigner function as a local spectral density: advantages and disadvantages	193
2.1.5. Quasi-uniform fields and their spectra	194
2.1.6. Local quasi-uniform coherence function in the geometrical optics approximation	196
2.2. Generalized radiance of plane sources	198
2.2.1. Definition of generalized radiance	198
2.2.2. Generalized radiance of plane sources and nonclassical radiometry	199
2.3. Wolf's red and blue shifts of spectral lines	199
§ 3. PHENOMENOLOGICAL AND STATISTICAL-WAVE DERIVATIONS OF THE RADIATION TRANSFER EQUATION	200
3.1. Radiation transfer equations in scattering media	200

3.1.1. Phenomenological derivation	200
3.1.2. Heuristic applicability conditions for RTE	201
3.2. Dyson and Bethe-Salpeter equations	203
3.2.1. Discrete and continuous models of scattering media	203
3.2.2. The Dyson equation and effective parameters of random media	204
§ 4. NEW ASPECTS OF THE RTE	207
4.1. Transfer equations and the coherent field	207
4.2. Diffraction radiometry. The parabolic equation method	208
4.3. Correlation scattering cross sections	209
4.4. Limiting resolving power in radiometric measurements	211
§ 5. NEW APPLICATION FIELDS OF THE RTE	212
5.1. Enhanced backscattering (weak localization)	212
5.2. Nonlinear RTE and strong localization	217
5.3. RTE with fluctuating parameters. The effect of translucence	220
5.4. Warming and cooling effects in scattering media	226
5.5. Thermal radio emission of rough surfaces	228
§ 6. NEW EFFECTS IN STATISTICAL RADIATIVE TRANSFER	229
6.1. Scalar memory effect	229
6.2. Time reversed memory effect	232
6.3. Long correlation effects for intensities	232
6.4. Polarization effects	234
6.5. Correlation effects of imaging in diffuse scattering media	235
§ 7. CONCLUSION	237
REFERENCES	237

V. PHOTON WAVE FUNCTION

by I. BIALYNICKI-BIRULA (WARSAW, POLAND AND ROCHESTER, NY, USA)

§ 1. INTRODUCTION	248
1.1. Coordinate vs. momentum representation	249
1.2. Phase representation	250
1.3. Landau-Peierls wave function	251
1.4. Riemann-Silberstein wave function	252
§ 2. WAVE EQUATION FOR PHOTONS	254
2.1. Wave equation for photons in free space	254
2.2. Wave equation for photons in a medium	256
2.3. Analogy with the Dirac equation	259
§ 3. PHOTON WAVE FUNCTION IN COORDINATE REPRESENTATION	259
3.1. Photons have no antiparticles	260
3.2. Transformation properties of the photon wave function in coordinate representation	261
3.3. Photon Hamiltonian	262
§ 4. PHOTON WAVE FUNCTION IN MOMENTUM REPRESENTATION	263
4.1. Photon wave function as a Fourier integral	264
4.2. Interpretation of Fourier coefficients	265

4.3. Transformation properties of the photon wave function in momentum representation	267
§ 5. PROBABILISTIC INTERPRETATION	267
5.1. Scalar product	268
5.2. Expectation values of physical quantities	269
5.3. Connection with Landau-Peierls wave function	273
§ 6. EIGENVALUE PROBLEMS FOR THE PHOTON WAVE FUNCTION	273
6.1. Eigenvalue problems for momentum and angular momentum	274
6.2. Eigenvalue problem for the moment of energy	274
6.3. Photon propagation along an optical fiber as a quantum-mechanical bound state problem	276
§ 7. RELATIVISTIC INVARIANCE OF PHOTON WAVE MECHANICS	278
§ 8. LOCALIZABILITY OF PHOTONS	279
§ 9. PHASE-SPACE DESCRIPTION OF A PHOTON	281
§ 10. HYDRODYNAMIC FORMULATION	283
§ 11. PHOTON WAVE FUNCTION IN NON-CARTESIAN COORDINATE SYSTEMS AND IN CURVED SPACE	285
§ 12. PHOTON WAVE FUNCTION AS A SPINOR FIELD	286
§ 13. PHOTON WAVE FUNCTIONS AND MODE EXPANSION OF THE ELECTROMAGNETIC FIELD	288
§ 14. SUMMARY	290
ACKNOWLEDGMENTS	291
REFERENCES	292
AUTHOR INDEX	295
SUBJECT INDEX	305
CONTENTS OF PREVIOUS VOLUMES	309
CUMULATIVE INDEX	317
