I. TRANSVERSE PATTERNS IN WIDE-APERTURE NONLINEAR OPTICAL SYSTEMS *by NIKOLAY N. ROSANOV (ST. PETERSBURG, RUSSIAN FEDERATION)*

§ 1. INTRODUCTION	3
§ 2. FILAMENTATION	5
2.1. Filamentation of a plane wave	6
2.2. Filamentation of a wide beam	10
2.3. Stripe stationary beams, surface and guided waves	13
2.4. Filamentation in systems with feedback	17
§ 3. SPATIAL SOLITONS	21
3.1. 1D Spatial solitons and beams	22
3.2. 2D Spatial solitons	26
3.3. Spatiotemporal solitons	33
§ 4. SWITCHING WAVES AND SPATIAL HYSTERESIS	34
4.1. Diffusive and diffractive switching waves	34
4.2. Spatial switching and spatial hysteresis	37
§ 5. DIFFRACTIVE AUTOSOLITONS IN NONLINEAR INTERFEROMETERS	41
5.1. Single and coupled autosolitons	41
5.2. Mechanics of autosolitons	44
5.3. Interaction of autosolitons	46
§ 6. AUTOSOLITONS IN LASERS AND NONLINEAR WAVEGUIDES	49
6.1. Switching waves and autosolitons in bistable lasers	50
6.2. Temporal analogs in nonlinear waveguides	53
CONCLUSION	54
REFERENCES	57

II. OPTICAL SPECTROSCOPY OF SINGLE MOLECULES IN SOLIDS *by M. ORRIT, J. BERNARD, R. BROWN AND B. LOUNIS (TALENCE, FRANCE)*

§ 1. INTRODUCTION	63
§ 2. PRINCIPLES AND THEORETICAL BACKGROUND	66
2.1. General principles	66
2.2. Theoretical background	69
2.2.1. Optical spectrum of an impurity center in a cold matrix	69
2.2.2. Spectral diffusion and dephasing	75

§ 3. EXPERIMENTAL METHODS	83
3.1. Early development and overview	83
3.2. Fluorescence excitation of single molecules	88
3.2.1. Spectral selection	88
3.2.1.1. Low-temperature setup	88
3.2.1.2. Monochromatic light source	89
3.2.1.3. Beam processing	90
3.2.2. Spatial selection	90
3.2.2.1. Optical fiber	90
3.2.2.2. Lens	92
3.2.2.3. Pinhole	92
3.2.3. Fluorescence collection	92
3.2.3.1. Parabolic mirror	92
3.2.3.2. Wide-angle lens	93
3.2.4. Additional devices	93
3.2.5. Choice of the host-guest system	93
§ 4. REVIEW OF RESULTS	95
4.1. Direct spectroscopy of single molecules	95
4.1.1. Pentacene in para-terphenyl crystals	95
4.1.2. Distribution of lines, homogeneous lineshape and width	96
4.1.3. Saturation and dependence on temperature	99
4.1.4. Perturbation by external fields	100
4.1.4.1. Electric field	101
4.1.4.2. Pressure effect	102
4.1.5. Dispersed fluorescence	104
4.1.6. Localization of molecules	105
4.1.6.1. Polarization of the exciting light	106
4.1.6.2. Two-dimensional microscopy	106
4.2. Intramolecular dynamics	107
4.2.1. Optical saturation	108
4.2.2. Fluorescence lifetime	110
4.2.3. Correlation functions	111
4.2.4. Anti-bunching	111
4.2.5. Bunching	113
4.2.6. Optically detected magnetic resonance	116
4.3. Dynamics of the host matrix	121
4.3.1. Spectral diffusion	121
4.3.2. Frequency trajectories	121
4.3.3. Single-molecule lines of terrylene in polyethylene	123
4.3.4. Fluorescence autocorrelation	125
4.3.5. Photo-induced spectral diffusion	129
§ 5. OUTLOOK	130
5.1. Optically detected magnetic resonance (ODMR)	130
5.2. Spectral diffusion, two-level systems, and glasses	131
5.3. Statistical studies of molecular parameters	132
5.4. Non-linear and quantum optics	133

5.5. Near-field optics	134
5.6. Single localized states in other materials	137
§ 6. CONCLUSION	138
ACKNOWLEDGEMENT	138
NOTE ADDED IN PROOF	139
REFERENCES	139

III. INTERFEROMETRIC MULTISPECTRAL IMAGING

by KAZUYOSHI ITOH (OSAKA, JAPAN)

§ 1. INTRODUCTION	147
§ 2. CLASSIFICATION OF THE SPECTRAL IMAGING TECHNIQUES	149
2.1. Detection of spatial and spectral densities of optical power	149
2.2. Classification of interferometric spectral imaging techniques	151
§ 3. UNIFIED THEORY OF COHERENCE DETECTION AND MULTISPECTRAL IMAGING	159
3.1. Spatial coherence function of homogeneous optical field	160
3.2. Detection of 3D spatial coherence	165
3.3. Recovery of source information from spatial coherence	168
3.4. Optical 3D Fourier transform	172
§ 4. INTERFEROMETRIC MULTISPECTRAL IMAGING IN THE IMAGE PLANE	174
4.1. Fundamental system	174
4.2. Liquid crystal polarization interferometer	177
4.3. Multiple-image parallel interferometer	183
§ 5. NOISE LIMITATIONS	185
5.1. Photon and detector noise in detection of optical energy distributions	185
5.2. Noise limitations of multispectral imaging techniques	188
5.3. Experimental comparison	190
§ 6. CONCLUSIONS	191
ACKNOWLEDGEMENTS	192
LIST OF SYMBOLS AND ABBREVIATIONS	192
REFERENCES	194

IV. INTERFEROMETRIC METHODS FOR ARTWORK DIAGNOSTICS

by DOMENICA PAOLETTI AND GIUSEPPE SCHIRRIPA SPAGNOLO (ROIO POGGIO, ITALY)

§ 1. INTRODUCTION	199
1.1. Generality on artwork subjects	200
§ 2. GENERAL REMARKS ON HOLOGRAPHIC INTERFEROMETRY	202
2.1. Principle of holography	202
2.2. Real-time holography	206
2.3. Double-exposure holographic interferometry	207
2.4. Sandwich holography	208

2.5. Interpretation of the interference pattern	210
2.6. Holographic interferometry as nondestructive testing	212
2.7. Holographic interferometry application in artwork diagnostics	213
2.8. Limiting factors of holographic interferometry	226
§ 3. ELECTRONIC SPECKLE PATTERN INTERFEROMETRY	228
3.1. Basic principles of electronic speckle pattern interferometry	229
3.2. Optical geometry in ESPI systems	232
3.3. Applications of ESPI to artwork nondestructive testing	236
3.4. Limitations of ESPI measurements on artworks	250
CONCLUSION	251
ACKNOWLEDGEMENTS	252
REFERENCES	253

V. COHERENT POPULATION TRAPPING IN LASER SPECTROSCOPY

by E. ARIMONDO (BOULDER, CO, USA)

§ 1. INTRODUCTION	259
§ 2. ANALYSIS FOR DISCRETE STATES	263
2.1. Density matrix	263
2.2. Numerical results	266
2.3. Coupled and noncoupled states	270
2.4. Dressed states	274
2.5. Quantum interferences	277
2.6. Level configurations	279
2.7. Doppler broadening	283
2.8. Relaxation processes	284
2.9. Three-level spectroscopy	287
§ 3. SPECTROSCOPY FOR DISCRETE STATES	288
3.1. Early experimental work	288
3.2. Experimental evidence	289
3.3. Modulated and pulsed light	296
3.4. Metrology	298
3.5. Optical bistability	301
3.6. Four-wave mixing	303
3.7. Light-induced drift	306
3.8. Index of refraction	307
§ 4. COHERENT POPULATION TRAPPING IN THE CONTINUUM	309
§ 5. LASER COOLING	310
5.1. $J_g = 1 \rightarrow J_e = 1$ One-dimensional velocity-selective coherent population trapping	310
5.2. High- J one-dimensional velocity-selective coherent population trapping	320
5.3. Two- and three-dimensional velocity-selective coherent population trapping	322
§ 6. ADIABATIC TRANSFER	325
§ 7. “LASING WITHOUT INVERSION”	329
§ 8. COHERENCES CREATED BY SPONTANEOUS EMISSION	340

VI. QUANTUM PHASE PROPERTIES OF NONLINEAR OPTICAL PHENOMENA

by R. TANAŚ AND A. MIRANOWICZ (POZNAŃ, POLAND), AND TS.
GANTSOG (GARCHING, GERMANY AND ULAANBAATAR, MONGOLIA)

§ 1. INTRODUCTION	357
§ 2. PHASE FORMALISMS	362
2.1. Pegg–Barnett phase formalism	364
2.2. Phase distributions from s -parametrized quasidistributions	371
§ 3. PHASE PROPERTIES OF SINGLE-MODE OPTICAL FIELDS	378
3.1. Coherent states	378
3.2. Superpositions of coherent states	381
3.3. Squeezed states	385
3.4. Jaynes–Cummings model	388
3.5. Anharmonic oscillator model	391
3.6. Displaced number states	396
§ 4. PHASE PROPERTIES OF TWO-MODE OPTICAL FIELDS	399
4.1. Two-mode squeezed vacuum	402
4.2. Pair coherent states	408
4.3. Elliptically polarized light propagating in a nonlinear Kerr medium	411
4.4. Second-harmonic generation	415
4.5. Parametric down conversion with quantum pump	421
§ 5. CONCLUSION	426
ACKNOWLEDGMENTS	426
