

CONTENTS

Preface	vii
Dedication	xi
Parallel Numerical Algorithms: An Introduction <i>David E. Keyes</i>	1
LINEAR SYSTEMS	
On Parallel Numerical Software Libraries <i>James W. Demmel</i>	17
Parallel Direct Methods for Sparse Linear Equations <i>Michael T. Heath</i>	55
Linear System Solvers: Sparse Iterative Methods <i>Henk A. Van der Vorst and Tony F. Chan</i>	91
Implicitly Restarted Arnoldi/Lanczos Methods for Large Scale Eigenvalue Calculations <i>Danny C. Sorensen</i>	119
PRECONDITIONING	
Approximate and Incomplete Factorizations <i>Tony F. Chan and Henk A. Van der Vorst</i>	167
Parallel Multigrid Methods <i>Jim E. Jones and Stephen F. McCormick</i>	203
Domain Decomposition Methods for Partial Differential Equations <i>Barry F. Smith</i>	225

“FAST” APPLICATION OF OPERATORS**Parallel FFTs***Richard B. Pelz*245**Some Empirical Results on Using Multipole-Accelerated Iterative Methods to Solve 3-D Potential Integral Equations***F.T. Korsmeyer, J. Phillips, K. Nabors, and J. White*267**Multiresolution Representation and Numerical Algorithms: A Brief Review***Ami Harten* 289**PARALLEL TOOLS, ENVIRONMENTS, AND BENCHMARKING****Graph Partitioning Algorithms with Applications to Scientific Computing***Alex Pothén* 323**An Introduction to Performance Debugging for Parallel Computers***William D. Gropp* 369**NAS Parallel Benchmark Results***David H. Bailey* 383
