PREFACE	ix

Buckling Analysis of Elastic Structures: A Computational Approach

Eduard Riks

I. Introduction	2
II. Basics, the Geometrical Point of View	6
III. Basics, the Stability Point of View	22
IV. Computations	40
V. Examples and Conclusion	61
References	72

Computational Mechanics for Metal Deformation Processes Using Polycrystal Plasticity

Paul R. Dawson and Esteban B. Marin

I. Introduction	78
II. Orientations and Orientation Distributions	81
III. Evolution of Texture and Strength	88
IV. Field Equations for Deformation	99
V. Computing the Deformation by Using the Finite-Element Method	113
VI. Application to Forming Processes	121
VII. Studies of Microstructure	133
VIII. Summary	152
IX. Notation	157
X. Appendix: Matrix Representations	161
Acknowledgments	162
References	163

Nonlinear Composites

Pedro Ponte Castañeda and Pierre Suquet

I. Introduction	172
II. Effective Behavior and Potentials	175
III. Variational Methods Based on a Homogeneous Reference Medium	187
IV. Variational Methods Based on a Linear Comparison Composite	192

V. A Second-Order Theory	216
VI. A Selection of Results for Linear Composites	228
VII. Applications to Nonlinear Composites and Discussion	237
VIII. Concluding Remarks	280
IX. Appendices	281
Acknowledgments	295
References	295

The Mathematical Foundation of Plasticity Theory

Wei H. Yang

Abstract	303
I. Introduction	304
II. Minkowski Norms and Hölder Inequality	307
III. Generalized Hölder Inequality	308
IV. Constructing the Dual Norm	309
V. Application to Plasticity	311
VI. A Duality Theorem for Plane Stress Problems	313
References	315

Forced Generation of Solitary-Like Waves Related to Unstable Boundary Layers

Oleg S. Ryzhov and Elena V. Bogdanova-Ryzhova

I. Introduction: Historical Perspective	318
II. The Triple Deck	326
III. The BDA System	335
IV. The KdV System	376
V. Solitons and the Onset of Random Disturbances	403
Acknowledgments	413
References	413
