

CONTENTS

1 MECHANICAL DESIGN

1.1 Tools and Shop Processes 2

- 1.1.1 Hand Tools 2
- 1.1.2 Machines for Making Holes 2
- 1.1.3 The Lathe 4
- 1.1.4 Milling Machines 7
- 1.1.5 Grinders 7
- 1.1.6 Tools for Working Sheet Metal 8
- 1.1.7 Casting 9

1.2 Materials 10

- 1.2.1 Parameters to Specify Properties of Materials 10
- 1.2.2 Heat Treating and Cold Working 12
- 1.2.3 Iron and Steel 14
- 1.2.4 Nickel Alloys 14
- 1.2.5 Copper and Copper Alloys 15
- 1.2.6 Aluminum Alloys 16
- 1.2.7 Other Metals 16
- 1.2.8 Plastics 17
- 1.2.9 Glasses and Ceramics 18

1.3 Joining Materials 19

- 1.3.1 Soldering 19
- 1.3.2 Brazing 20
- 1.3.3 Welding 22
- 1.3.4 Threaded Fasteners 23

1.3.5 Rivets 26

1.3.6 Pins 26

1.3.7 Retaining Rings 27

1.3.8 Adhesives 28

1.4 Mechanical Drawing 28

1.4.1 Drawing Tools 28

1.4.2 Basic Principles of Mechanical Drawing 28

1.4.3 Dimensions 32

1.4.4 Tolerances 34

1.4.5 From Design to Working Drawings 36

1.5 Physical Principles of Mechanical Design 37

1.5.1 Bending of a Beam or Shaft 37

1.5.2 Twisting of a Shaft 39

1.5.3 Stress Relief 39

1.5.4 Vibration of Beams and Shafts 40

1.5.5 Shaft Whirl and Vibration 41

1.6 Constrained Motion 43

1.6.1 Kinematic Design 43

1.6.2 Plain Bearings 45

1.6.3 Ball Bearings 46

1.6.4 Linear-Motion Bearings 48

1.6.5 Springs 48

2 WORKING WITH GLASS

2.1 Properties of Glasses	55
2.1.1 Chemical Composition and Chemical Properties of Some Laboratory Glasses	55
2.1.2 Thermal Properties of Laboratory Glasses	56
2.1.3 Optical Properties of Laboratory Glassware	57
2.1.4 Mechanical Properties of Glass	57
2.2 Laboratory Components Available in Glass	58
2.2.1 Tubing and Rod	58
2.2.2 Demountable Joints	58
2.2.3 Valves and Stopcocks	59
2.2.4 Graded Glass Seals and Glass-to-Metal Seals	60
2.3 Laboratory Glassblowing Skills	61
2.3.1 The Glassblower's Tools	61
2.3.2 Cutting Glass Tubing	62
2.3.3 Pulling Points	63
2.3.4 Sealing off Tubing: The Test-Tube End	64
2.3.5 Making a T-Seal	66
2.3.6 Making a Straight Seal	66
2.3.7 Making a Ring Seal	68
2.3.8 Bending Glass Tubing	69
2.3.9 Annealing	70
2.3.10 Sealing Glass to Metal	70
2.3.11 Grinding and Drilling Glass	72

3 VACUUM TECHNOLOGY

3.1 Gases	75
3.1.1 The Nature of the Residual Gases in a Vacuum System	75
3.1.2 Kinetic Theory	76
3.1.3 Surface Collisions	77
3.1.4 Bulk Behavior versus Molecular Behavior	77
3.2 Gas Flow	77
3.2.1 Parameters for Specifying Gas Flow	77
3.2.2 Network Equations	78
3.2.3 The Master Equation	78
3.2.4 Conductance Formulae	79
3.2.5 Pumpdown Time	79
3.2.6 Outgassing	80
3.3 Pressure Measurement	80
3.3.1 Mechanical Gauges	80
3.3.2 Thermal-Conductivity Gauges	82
3.3.3 Ionization Gauges	82
3.3.4 Mass Spectrometers	83
3.4 Vacuum Pumps	83
3.4.1 Mechanical Pumps	83
3.4.2 Vapor Diffusion Pumps	87
3.4.3 Sorption Pumps, Getter Pumps, Cryopumps, and Ion Pumps	88
3.5 Vacuum Hardware	90
3.5.1 Materials	90
3.5.2 Demountable Vacuum Connections	92
3.5.3 Valves	94
3.5.4 Mechanical Motion in the Vacuum System	94
3.5.5 Traps and Baffles	97
3.5.6 Molecular Beams and Gas Jets	99
3.5.7 Electronics and Electricity <i>in Vacuo</i>	102

- 3.6 Vacuum-System Design and Construction 103**
- 3.6.1 Some Typical Vacuum Systems 103
- 3.6.2 The Construction of Metal Vacuum Apparatus 109
- 3.6.3 Surface Preparation 112
- 3.6.4 Leak Detection 113
- 3.6.5 Ultrahigh Vacuum 113

4 OPTICS

- 4.1 Optical Terminology 119**
- 4.2 Analysis of Optical Systems 121**
 - 4.2.1 Simple Reflection and Refraction Analysis 121
 - 4.2.2 Paraxial-Ray Analysis 123
 - 4.2.3 The Use of Impedances in Optics 131
 - 4.2.4 Gaussian Beams 135
- 4.3 Optical Components 138**
 - 4.3.1 Mirrors 138
 - 4.3.2 Windows 142
 - 4.3.3 Lenses and Lens Systems 143
 - 4.3.4 Prisms 149
 - 4.3.5 Diffraction Gratings 154
 - 4.3.6 Polarizers 157
 - 4.3.7 Filters 164
 - 4.3.8 Fiber Optics 168
 - 4.3.9 Devices for Positional and Orientational Adjustment of Optical Components 170
 - 4.3.10 Optical Tables and Vibration Isolation 175
 - 4.3.11 Alignment of Optical Systems 176
 - 4.3.12 Mounting Optical Components 176
 - 4.3.13 Cleaning Optical Components 179
- 4.4 Optical Materials 182**
 - 4.4.1 Materials for Windows, Lenses, and Prisms 182
 - 4.4.2 Materials for Mirrors and Diffraction Gratings 191
- 4.5 Optical Sources 193**
 - 4.5.1 Coherence 193
 - 4.5.2 Radiometry: Units and Definitions 194
 - 4.5.3 Photometry 195
 - 4.5.4 Line Sources 195
 - 4.5.5 Continuum Sources 196
- 4.6 Lasers 206**
 - 4.6.1 General Principles of Laser Operation 215
 - 4.6.2 General Features of Laser Design 216
 - 4.6.3 Specific Laser Systems 220
 - 4.6.4 Laser Radiation 227
 - 4.6.5 Optical Modulators 228
 - 4.6.6 How to Work Safely with Light Sources 231
- 4.7 Optical Dispersing Instruments 233**
 - 4.7.1 Comparison of Prism and Grating Spectrometers 236
 - 4.7.2 Design of Spectrometers and Spectrographs 238
 - 4.7.3 Calibration of Spectrometers and Spectrographs 241
 - 4.7.4 Fabry-Perot Interferometers and Etalons 242
 - 4.7.5 Design Considerations for Fabry-Perot Systems 251
 - 4.7.6 Double-Beam Interferometers 251
- 4.8 Detectors 256**
 - 4.8.1 Figures of Merit for Detectors 257
 - 4.8.2 Photoemissive Detectors 260
 - 4.8.3 Photoconductive Detectors 271
 - 4.8.4 Photovoltaic Detectors (Photodiodes) 276

- 4.8.5 Detector Arrays 280
- 4.8.6 Thermal Detectors 280
- 4.8.7 Detector Calibration 285

5 CHARGED-PARTICLE OPTICS

5.1 Basic Concepts of Charged-Particle Optics 305

- 5.1.1 Brightness 305
- 5.1.2 Snell's Law 306
- 5.1.3 The Helmholtz-Lagrange Law 306
- 5.1.4 Vignetting 307

5.2 Electrostatic Lenses 308

- 5.2.1 Geometrical Optics of Thick Lenses 308
- 5.2.2 Cylinder Lenses 310
- 5.2.3 Aperture Lenses 312
- 5.2.4 Matrix Methods 313
- 5.2.5 Aberrations 314
- 5.2.6 Lens Design Example 318

5.3 Charged-Particle Sources 319

- 5.3.1 Electron Guns 320
- 5.3.2 Electron-Gun Design Example 321
- 5.3.3 Ion Sources 323

5.4 Energy Analyzers 325

- 5.4.1 Parallel-Plate Analyzers 326
- 5.4.2 Cylindrical Analyzers 327
- 5.4.3 Spherical Analyzers 329
- 5.4.4 Preretardation 330
- 5.4.5 The Energy-Add Lens 330
- 5.4.6 Fringing-Field Correction 332

5.5 Mass Analyzers 332

- 5.5.1 Magnetic Sector Analyzers 333
- 5.5.2 Wien Filter 333
- 5.5.3 Dynamic Mass Spectrometers 334

5.6 Electron- and Ion-Beam Devices: Construction 335

- 5.6.1 Vacuum Requirements 335
- 5.6.2 Materials 335
- 5.6.3 Lens and Lens-Mount Design 336
- 5.6.4 Charged-Particle Detection 337
- 5.6.5 Magnetic-Field Control 341

6 ELECTRONICS

6.1 Preliminaries 346

- 6.1.1 Circuit Theory 346
- 6.1.2 Circuit Analysis 348
- 6.1.3 High-Pass and Low-Pass Circuits 352
- 6.1.4 Resonant Circuits 354
- 6.1.5 The Laplace-Transform Method 356
- 6.1.6 *RLC* Circuits 359
- 6.1.7 Transient Response of Resonant Circuits 360
- 6.1.8 Transformers and Mutual Inductance 361
- 6.1.9 Compensation 362
- 6.1.10 Filters 363

6.2 Passive Components 363

- 6.2.1 Fixed Resistors and Capacitors 364
- 6.2.2 Variable Resistors 365
- 6.2.3 Transmission Lines 367
- 6.2.4 Coaxial Connectors 378
- 6.2.5 Relays 379

- 6.3 Active Components 382**
 - 6.3.1 Diodes 382
 - 6.3.2 Transistors 385
 - 6.3.3 Field-Effect Transistors 390
 - 6.3.4 Silicon Controlled Rectifiers 392
 - 6.3.5 Unijunction Transistors 394
 - 6.3.6 Thyratrons 395

- 6.4 Amplifiers and Pulse Electronics 395**
 - 6.4.1 Definition of Terms 395
 - 6.4.2 General Transistor-Amplifier Operating Principles 398
 - 6.4.3 Operational-Amplifier Circuit Analysis 402
 - 6.4.4 Instrumentation and Isolation Amplifiers 406
 - 6.4.5 Stability and Oscillators 408
 - 6.4.6 Detecting and Processing Pulses 409

- 6.5 Power Supplies 416**
 - 6.5.1 Power-Supply Specifications 416
 - 6.5.2 Regulator Circuits and Programmable Power Supplies 417

- 6.6 Digital Electronics 420**
 - 6.6.1 Binary Counting 420
 - 6.6.2 Elementary Functions 421
 - 6.6.3 Boolean Algebra 421
 - 6.6.4 Arithmetic Units 423
 - 6.6.5 Data Units 423
 - 6.6.6 Dynamic Systems 423
 - 6.6.7 Digital-to-Analog Conversion 426
 - 6.6.8 Memories 430
 - 6.6.9 Logic and Function 432
 - 6.6.10 Implementing Logic Functions 436

- 6.7 Data Acquisition 441**
 - 6.7.1 Voltage Levels and Timing 441
 - 6.7.2 Format 442
 - 6.7.3 System Overhead 443
 - 6.7.4 Analog Input Signals 444
 - 6.7.5 Multiple Signal Sources: Data Loggers 447
 - 6.7.6 Standardized Data-Acquisition Systems 447
 - 6.7.7 Personal-Computer Control of Experiments 452

- 6.8 Extraction of Signal from Noise 458**
 - 6.8.1 Signal-to-Noise Ratio 458
 - 6.8.2 Optimizing the Signal-to-Noise Ratio 459
 - 6.8.3 The Lock-In Amplifier and Gated Integrator or Boxcar 460
 - 6.8.4 Signal Averaging 461
 - 6.8.5 Waveform Recovery 462

- 6.9 Grounds and Grounding 463**
 - 6.9.1 Electrical Grounds and Safety 463
 - 6.9.2 Electrical Pickup: Capacitive Effects 466
 - 6.9.3 Electrical Pickup: Inductive Effects 467
 - 6.9.4 Electromagnetic Interference and RFI 467
 - 6.9.5 Power-Line-Coupled Noise 468
 - 6.9.6 Ground Loops 468

- 6.10 Hardware and Construction 470**
 - 6.10.1 Circuit Diagrams 471
 - 6.10.2 Component Selection and Construction Techniques 471
 - 6.10.3 Printed Circuit Boards 474
 - 6.10.4 Wire Wrap™ Boards 480
 - 6.10.5 Wires and Cables 482
 - 6.10.6 Connectors 485

- 6.11 Troubleshooting 490**
 - 6.11.1 General Procedures 490
 - 6.11.2 Identifying Parts 493

Appendix to Chapter 6: Assembly of Coaxial Connectors 502

7.2 The Control of Temperature 517
7.2.1 Temperature Control at Fixed Temperatures 517
7.2.2 Temperature Control at Variable Temperatures 519

7 MEASUREMENT AND CONTROL OF TEMPERATURE

7.1 The Measurement of Temperature 510

- 7.1.1 Expansion Thermometers 510
- 7.1.2 Thermocouples 511
- 7.1.3 Resistance Thermometers 514
- 7.1.4 Quartz Thermometers 516
- 7.1.5 Comparison of Thermometers 516
- 7.1.6 Thermometer Calibration 517
