Contents

1. Introduction 1

2. Overview of Ionization Mechanisms 5
2.1 Considerations to the Center Picture 6
2.2 Two Bodies: Binary-Encounter Electron Emission 8
2.3 Three Bodies: Single-Center Electron Emission 11
2.4 Three Bodies: Two-Center Electron Emission 12
2.5 Four Bodies: Collisions Involving Projectile Electrons 13

3. Theoretical Work 17
3.1 Two-Body Approximations 17
3.1.1 The Rutherford Formula 18
3.1.2 Elastic Scattering Model 20
3.1.3 Binary Encounter Approximation 23
3.2 Classical Trajectory Monte Carlo Method 25
3.3 Semiclassical Approximation 31
3.3.1 Basic Formalisms 31
3.3.2 Partial Wave Expansion 32
3.3.3 Dipole Approximation 34
3.3.4 Free Electron Peaking Approximation 35
3.4 Born Approximations 37
3.4.1 Free-Electron Approximation 37
3.4.2 First-Order Born Approximation 40
3.4.3 Oppenheimer-Brinkman-Kramers Approximation 44
3.5 Distorted Wave Models 46
3.5.1 Continuum Distorted Wave Approximation 47
3.5.2 Continuum Distorted Wave-Eikonal Initial State Approximation 49
3.5.3 Quantum-Mechanical Impulse Approximation 53
3.5.4 Distorted Strong Potential Born Approximation and Related Models 56
3.6 Close-Coupling Calculations 59

3.7 Dressed Projectiles 66
3.7.1 First-Order Theory by Bates and Griffing 66
3.7.2 Higher-Order Theories for Binary Encounter Electrons 68

4. Experimental Methods 75
4.1 Experimental Set-Up 75
4.2 Target Design 76
4.3 Electron Energy Analysis 80
4.3.1 Low-Energy Electron Emission 81
4.3.2 Background Suppression at Low Energies 82
4.3.3 High-Energy Electrons 86
4.4 Coincidence Techniques 87
4.4.1 Electron-Projectile Ion Coincidences 87
4.4.2 Electron-Target Ion Coincidences 89
4.4.3 Outer Shell-Inner Shell Coincidences 92

5. Ionization by Bare Projectiles 95
5.1 Binary Encounter Collisions 95
5.1.1 Shape of the Binary Encounter Peak 97
5.1.2 Shift of the Binary Encounter Peak 102
5.2 Target-Center Phenomena 105
5.2.1 Early Observations 105
5.2.2 Energy Distribution of Soft-collision Electrons 106
5.2.3 Angular Distribution of Soft Collision Electrons 109
5.2.4 Backscattering of High-Energy Electrons by the Target 119
5.3 Two-Center Phenomena 121
5.3.1 Electron Capture to the Continuum 122
5.3.2 Two-Center Electron Emission 129
5.3.3 Saddle Point Electron Emission 136
5.4 Saturation Effects 141
5.4.1 Differential Cross Sections 142
5.4.2 Total Cross Sections 144

6. Ionization by Dressed Projectiles 149
6.1 Definitions and Notations 149
6.2 Screening Effects of Projectile Electrons 150
6.2.1 Screened Point Charge 150
6.2.2 Experimental Studies 151
6.2.3 Theoretical Interpretation 154
6.3 Binary Encounter Electron Emission 160
6.3.1 Enhancement of the Binary Encounter Peak 160
6.3.2 Diffraction Effects 165

6.4 Electron Emission from the Projectile 167
6.4.1 Theoretical Considerations 167
6.4.2 Experimental Studies 170
6.5 Dielectronic Processes 177
6.5.1 Threshold Behaviour 178
6.5.2 Total Cross Sections 179
6.5.3 Differential Electron Emission 184
6.5.4 Coincidence Studies of Electron Spectra 186

7. Multiple Electron Processes 193
7.1 Slow Collisions between Heavy Particles 194
7.2 Fractions of Multi-Electron Processes 198
7.3 Multiple Outer-Shell Ionization 200
7.4 Transfer Ionization 203
7.5 Inner-Shell Ionization 206

8. Concluding Remarks 209

Appendix 213
A. Summary of Analytic Cross Section Formulae 213
B. Kinematic Effects on Electron Emission 215
C. References to Double Differential Cross Section Studies 216

References 225
