## VORTICES AND NONLINEAR INSTABILITIES IN INHOMOGENEOUS PLASMA

V. I. Petviashvili and I. O. Pogutse

Introduction . . . . .	1
1. Small-scale drift vortices . . . . .	6
1.1. Basic equations . . . . .	7
1.2. Small-scale vortices and nonlinear drift-dissipative instability . . . . .	10
1.3. Vortices of the skin size . . . . .	17
1.4. Effect of the temperature gradient on the structure of vortices . . . . .	21
2. Vortices and magnetic islands in plasma with shear . . . . .	25
2.1. Drift vortices with diameter much less than $r_{Bi}$ . . . . .	25
2.2. Chains of the small-scale magnetic islands	29
2.3. Large-scale drift vortices in plasma with shear . . . . .	32
2.4. Flute vortices in plasma with shear . . . . .	36
2.5. Nonlinear flute waves. Variational approach . . . . .	38
3. Dissipative amplification of large-scale vortices in inhomogeneous plasma . . . . .	46
3.1. Dissipative amplification of the flute vortices . . . . .	46

3.2.	Amplification of the drift-flute vortices in plasma of finite pressure with shear . . . . .	48
3.3.	Dissipative amplification of the drift-Alfvén vortices . . . . .	51
3.4.	Flute instability in the case of strong viscosity . . . . .	52
References	. . . . .	56

## NONLOCAL THEORY OF CYCLOTRON AND CERENKOV ABSORPTION IN A NONUNIFORMLY MAGNETIZED PLASMA

S. V. Kasilov, A. I. Pyatak, and K. N. Stepanov

Introduction	. . . . .	61
1.	Cyclotron and Cerenkov absorption in the nonuniformly magnetized plasma (qualitative discussion) . . . . .	65
1.1.	Resonant-wave-particle interaction in a magnetic field . . . . .	65
1.2.	The role of Coulomb collisions. The quasilinear approximation . . . . .	72
2.	Derivation of RF-current-density expressions and the quasilinear kinetic equation based on the Vlasov equation . . . . .	78
2.1.	The Vlasov equation in guiding-center variables . . . . .	78
2.2.	Solution of the linearized Vlasov equation. Current density. Collisional decorrelation of the wave-particle phase . . . . .	85
2.3.	Applicability conditions for linear and quasilinear approximations . . . . .	91
2.4.	Nonlocal quasilinear equation . . . . .	96

2.5.	Boundary conditions. Variable transformations . . . . .	104
2.6.	Systems with axial symmetry. Account of the neoclassical transport . . . . .	107
2.7.	Quasilinear equation in the case of a uniform magnetic field . . . . .	110
2.8.	Quasilinear equation for the cyclotron resonance. Strong decorrelation . . . . .	117
3.	Cyclotron resonance for FMSW in tokamaks . . . . .	121
3.1.	Multiple-ion cyclotron resonance . . . . .	121
3.2.	ICR at the fundamental frequency ( $n = 1$ ) for plasma bulk ions . . . . .	123
3.3.	Cyclotron resonance for minority ions ( $n_\alpha \ll n_{cr}$ , $n_\alpha \gg n_{cr}$ ) . . . . .	142
3.4.	ICR on trapped ions . . . . .	149
3.5.	The current drive for ICR . . . . .	163
4.	ICR for FMSW in stellarators . . . . .	164
4.1.	FMSW absorption in the eikonal approximation . . . . .	164
4.2.	Straight stellarators . . . . .	168
4.3.	Toroidal stellarators . . . . .	171
5.	The bounce-resonance expansion method for studying cyclotron and Cerenkov resonances . . . . .	174
5.1.	The bounce-resonance expansion method for studying ICR in tokamaks . . . . .	174
5.2.	Cyclotron FMSW absorption by alpha particles . . . . .	191
5.3.	FMSW and AW Cerenkov absorption by electrons in the tokamak plasma . . . . .	205
5.4.	The canonical variable method. The action-angle variables . . . . .	229
6.	Cyclotron absorption of ion Bernstein waves . . . . .	241
6.1.	Cyclotron resonance on minority ions . . . . .	241
6.2.	The current drive for the minority ions . . . . .	246
7.	FMSW absorption in adiabatic traps . . . . .	247
7.1.	ICR on the second frequency harmonic . . . . .	247
7.2.	The cyclotron resonance for minority ions . . . . .	263

7.3.	FMSW excitation and absorption in a gas-dynamic trap . . . . .	272
Appendix	. . . . .	277
References	. . . . .	291
