

# Contents

<b>1. Introduction . . . . .</b>	<b>1</b>
1.1 General Remarks . . . . .	1
1.2 The Aharonov–Bohm Effect . . . . .	2
<b>2. Motion Around a Solenoid . . . . .</b>	<b>5</b>
2.1 Basic Ideas . . . . .	5
2.2 The Confining Potential . . . . .	6
2.3 The Two Wave Functions . . . . .	7
2.4 Use of Expectation Values of the Hamiltonian . . . . .	8
2.4.1 Equipment . . . . .	10
2.4.2 Eigenvalues . . . . .	10
2.5 The Flux Transformation . . . . .	11
2.6 Gauge Transformations and a Conjecture . . . . .	12
2.6.1 Notation for the Integral Part . . . . .	12
2.6.2 Only Quantum Effects in $R$ . . . . .	13
2.7 Relation to Faraday’s Induction . . . . .	13
2.7.1 Model for the Electromagnetic Induction Effect . . . . .	14
2.8 Quantum Treatment, Bloch’s Theorem and Acceleration . . . . .	15
2.8.1 Constant Acceleration . . . . .	16
2.8.2 What Determines the Solution? . . . . .	17
2.8.3 The Change in Phase and the AB Effect . . . . .	17
2.9 Composition of the Angular Momentum in $R$ . . . . .	18
2.10 Nature of the Wave Functions . . . . .	19
2.10.1 Expansion of $\psi_0(\mathbf{x})$ and Measurement of $r m(\Lambda/\hbar)$ . . . . .	20
<b>3. Generalization of the Aharonov–Bohm Effect . . . . .</b>	<b>21</b>
3.1 Motion in a Uniform Induction $B$ . . . . .	21
3.2 Cyclotron Motion . . . . .	22
3.2.1 Orbit Quantization: The de Haas–van Alphen Effect . .	24
3.3 Next Approximation and the Radial Oscillations . . . . .	24
3.4 The “Field-Free” Wave Function (Uniform $B_z$ ) . . . . .	27
3.4.1 The AB Effect in Disordered Conductors . . . . .	29
3.5 The Basic Principle (General $B_z$ Field) . . . . .	30
3.6 The Hollow Field (Axially Symmetric $B_z$ ) . . . . .	31

## VIII    Contents

3.7	Equivalent Wave Functions . . . . .	32
3.8	The Betatron . . . . .	32
4.	<b>Classical Physics and the Adiabatic Principle . . . . .</b>	35
4.1	Motion in Axially Symmetric Induction . . . . .	35
4.1.1	The Nature of Closed Orbits . . . . .	35
4.1.2	Integrals of Motion . . . . .	36
4.2	Action Variables . . . . .	37
4.3	Angle–Action Equations of Motion . . . . .	39
4.4	The Adiabatic Principle . . . . .	40
4.5	Relation to the AB Effect . . . . .	41
4.6	The Variation of $A$ . . . . .	41
5.	<b>Problems with, and Criticisms of, Experiments and the AB Effect Itself . . . . .</b>	45
5.1	The Standard Biprism Experiment . . . . .	45
5.2	Types of Measurement . . . . .	46
5.3	Must the Electron be Present? . . . . .	47
5.4	Fringe Shift ad Profile Shift . . . . .	48
5.4.1	Kirchhoff-Type Calculations . . . . .	48
5.5	Measuring Fringe Shifts Versus Profile Shifts . . . . .	50
5.6	The Chambers–Pryce Effect . . . . .	51
5.6.1	Uncertainty and a Limitation . . . . .	53
5.7	Potentials and Fields . . . . .	53
5.7.1	An Alternative Form of Basic Equations . . . . .	54
5.7.2	An Argument of Bocchieri and Loinger . . . . .	55
5.7.3	Conclusion . . . . .	55
5.8	The Inaccessible Field and Fringe Fields . . . . .	56
5.8.1	Arguments Involving Fringe Fields . . . . .	57
5.9	Summary on “Potentials Versus Fields” . . . . .	58
5.10	Aharonov–Bohm Scattering . . . . .	59
5.11	Experiments with Superconductors . . . . .	61
5.11.1	A Basic Equation . . . . .	62
5.11.2	Flux Quantization . . . . .	63
5.12	The Behaviour of $B_z(\rho)$ and $j_\theta(\rho)$ . . . . .	64
5.12.1	Result of the Experiments . . . . .	65
6.	<b>Accuracy of Flux Measurements . . . . .</b>	67
6.1	Uncertainty Notation . . . . .	67
6.2	Frauenhofer Diffraction Example . . . . .	68
6.3	Increased Accuracy Using $N$ Photons . . . . .	69
6.4	Heisenberg’s Flux Measurement . . . . .	71
6.4.1	Accuracy when Using $2N$ Test Particles . . . . .	72
6.5	Interference Measurements . . . . .	73
6.5.1	Application to the Static AB Effect . . . . .	74

6.5.2	The AB Effect Versus Heisenberg's Experiment . . . . .	75
6.6	Other Considerations on Flux Measurement . . . . .	75
6.6.1	Superconductor Physics . . . . .	76
6.7	The Number-Phase Relation . . . . .	76
6.7.1	Coherent Radiation . . . . .	77
6.8	Application to Superconductors . . . . .	78
6.9	Experimental Verification of the Phase Uncertainty in a Superconductor . . . . .	79
7.	<b>Phenomena Similar to the Magnetic Aharonov-Bohm Effect . . . . .</b>	81
7.1	The Electric AB Effect . . . . .	81
7.2	The Aharonov-Casher Effect . . . . .	83
7.3	The Scalar AB Effect . . . . .	85
8.	<b>Other Phenomena Involving Movement on a Closed Circuit . . . . .</b>	87
8.1	Canonical Transformations . . . . .	89
8.2	Cyclic or Periodic Motion: Action and Angle . . . . .	90
8.3	Variation with Time: Adiabatic Theorem . . . . .	92
8.4	Hannay's Angle and Anholonomy . . . . .	94
8.4.1	Anholonomy: A Geometrical Example . . . . .	94
8.5	Foucault's Pendulum and Larmor Precession . . . . .	96
8.5.1	Use of the Action Variable . . . . .	97
8.5.2	Anholonomy Example . . . . .	98
8.5.3	Larmor Precession . . . . .	99
8.6	A Bead on a Smooth Rotating Wire Loop . . . . .	100
8.7	The Sagnac Effect . . . . .	102
8.7.1	Relation of the Sagnac Effect to Other Phenomena . . . . .	103
8.8	Berry's Phase . . . . .	104
8.8.1	Relation to Hannay's Angle . . . . .	106
8.9	Larmor Precession and Wave Mechanics . . . . .	106
8.9.1	Motion in a Weak Induction Field $B$ . . . . .	107
8.9.2	Does Berry's Phase Exist for Larmor Precession? . . . . .	109
8.9.3	On the Nature of Berry's Phase . . . . .	110
8.10	Hannay Angles, Induction Fields and the Phase $\gamma$ . . . . .	111
8.10.1	Electron on an Orbit $\rho = \rho_T$ . . . . .	111
8.10.2	Relation of Hannay's Angle to the AB Effect . . . . .	112
8.10.3	The Phase $\gamma$ and Motion Under Induction . . . . .	113
8.10.4	Principles of the Phase $\gamma$ and Conclusions . . . . .	116
8.11	Miscellaneous Topics . . . . .	117
8.11.1	The Energy Estimate Used to Check the Method of Sect. 8.10 . . . . .	117
8.11.2	Particle Accelerators . . . . .	118
8.11.3	The Original AB Effect and Berry's Phase . . . . .	119

8.12 Anholonomy and Electromagnetic Wave Polarization . . . . .	120
8.13 Further Developments . . . . .	122
8.13.1 Generalization of Berry's Phase . . . . .	122
8.13.2 Other Topics . . . . .	123
<b>Appendix AI. Symmetric Motion in Axially Symmetric Fields by Quantum Extremum Method . . . . .</b>	<b>125</b>
<b>Appendix AII. The Eigenstates of the Operator <math>H_0</math> . . . . .</b>	<b>129</b>
<b>Appendix B. Classical Action and General Motion in an Axially Symmetric Induction . . . . .</b>	<b>131</b>
<b>Appendix C. Solutions for the Case of the Toroidal Solenoid . . . . .</b>	<b>135</b>
<b>Appendix D. Angle and Action for the Simple Harmonic Oscillator . . . . .</b>	<b>141</b>
<b>Appendix E. Angle and Action for a General Oscillator . . . . .</b>	<b>143</b>
<b>Appendix F. The Parallel Transport of Vectors . . . . .</b>	<b>147</b>
<b>Appendix G. The Basic Solution and Aharonov-Bohm Scattering . . . . .</b>	<b>155</b>
<b>Appendix H. Quantum Theory of Cyclotron Motion . . . . .</b>	<b>163</b>
H.1 Landau-Lifschitz Solution . . . . .	164
H.2 The Symmetric Schrödinger Equation Solution . . . . .	166
H.3 Motion in Uniform Induction $B$ . . . . .	170
