

Contents

1	Introduction	1
1.1	Invariant Manifolds in Infinite Dimensions	1
1.2	Aims and Scope of This Monograph	9
2	The Perturbed Nonlinear Schrödinger Equation	13
2.1	The Setting for the Perturbed Nonlinear Schrödinger Equation	13
2.2	Spatially Independent Solutions: An Invariant Plane	15
2.3	Statement of the Persistence and Fiber Theorems	17
2.4	Explicit Representations for Invariant Manifolds and Fibers	19
2.5	Coordinates Centered on the Resonance Circle	21
2.5.1	Definition of the \tilde{H} Norms	21
2.5.2	A Neighborhood of the Circle of Fixed Points	22
2.5.3	An Enlarged Phase Space	23
2.5.4	Scales Through δ	23
2.5.5	The Equations in Their Final Setting	24
2.6	($\delta = 0$) Invariant Manifolds and the Introduction of a Bump Function	28
2.6.1	($\delta = 0$) Invariant Manifolds	28
2.6.2	Tangent and Transversal Bundles of M	29
2.6.3	Introduction of a Bump Function	30
2.6.4	Existence, Smoothness, and Growth Rates for the “Bumped” Flow in the Enlarged Phase Space	31
3	Persistent Invariant Manifolds	35
3.1	Statement of the Persistence Theorem and the Strategy of Proof	35
3.2	Proof of the Persistence Theorems	38
3.2.1	Definition of the Graph Transform	38
3.2.2	The Graph Transform as a C^0 Contraction	42
3.3	The Existence of the Invariant Manifolds	51
3.4	Smoothness of the Invariant Manifolds	52
3.5	Completion of the Proof of the Proposition	61

4 Fibrations of the Persistent Invariant Manifolds	63
4.1 Statement of the Fiber Theorem and the Strategy of Proof	64
4.2 Rate Lemmas	65
4.3 The Existence of an Invariant Subbundle E	73
4.4 Smoothness of the Invariant Subbundle E	78
4.5 Existence of Fibers	89
4.6 Smoothness of the Fiber $f^E(Q)$ as a Submanifold	109
4.7 Metric Characterization of the Fibers	117
4.8 Smoothness of Fibers with Respect to the Base Point	124
References	161
Index	168
