I. THE WIGNER DISTRIBUTION FUNCTION IN OPTICS AND OPTOELECTRONICS *by D. DRAGOMAN (BUCHAREST, ROMANIA)*

§ 1.	INTRODUCTION	3
§ 2.	LIGHT PROPAGATION IN PHASE SPACE	4
§ 3.	WIGNER DISTRIBUTION FUNCTION	6
3.1.	Properties	7
3.2.	Examples	9
3.3.	Transformation laws	9
3.4.	Optical generation	12
§ 4.	LIGHT BEAM CHARACTERIZATION IN FIRST-ORDER OPTICAL SYSTEMS WITH THE WIGNER DISTRIBUTION FUNCTION	13
4.1.	Transformation laws for the Wigner distribution function moments	16
4.2.	Propagation invariants	17
4.3.	Wigner distribution function transformation law and the beam energy variation	18
4.4.	Comparison with other methods of beam characterization	19
§ 5.	OPTICAL SYSTEM CHARACTERIZATION WITH THE WIGNER DISTRIBUTION FUNCTION	20
5.1.	Characterization of aberrated optical systems	23
§ 6.	WIGNER DISTRIBUTION FUNCTION REPRESENTATION OF THE COUPLING EFFICIENCY	26
6.1.	Completely coherent single mode sources and waveguides	27
6.2.	Multimode, completely coherent sources and waveguides	30
6.3.	Partially coherent single mode sources and waveguides	31
§ 7.	THE FRACTIONAL WIGNER DISTRIBUTION FUNCTION	32
7.1.	Properties of the fractional Wigner distribution function	34
7.2.	Optical beam characterization in the near-field diffraction regime	35
7.3.	Optical production of fractional Wigner distribution function	37
§ 8.	OPTICAL BEAM CHARACTERIZATION IN NONLINEAR OPTICAL SYSTEMS	38
8.1.	Soliton solution of the NLS equation	42
§ 9.	COMPLEX FIELD RECONSTRUCTION FROM THE WIGNER DISTRIBUTION FUNCTION	44
§ 10.	WIGNER DISTRIBUTION FUNCTION IN QUANTUM OPTICS	49
§ 11.	CONCLUSIONS	53
	REFERENCES	53

II. DISPERSION RELATIONS AND PHASE RETRIEVAL IN OPTICAL SPECTROSCOPY

*by KAI-ERIK PEIPONEN (JOENSUU, FINLAND), ERIK M. VARTAINEN
(LAPPEENRANTA, FINLAND) AND TOSHIMITSU ASAOKA (SAPPORO, JAPAN)*

§ 1. INTRODUCTION	59
§ 2. KRAMERS-KRONIG RELATIONS	62
2.1. Hilbert transforms	62
2.2. Kramers-Kronig relations in linear absorption spectroscopy	64
2.3. Kramers-Kronig relations in reflection spectroscopy	67
2.4. Dispersion relations in nonlinear optics	69
§ 3. PHASE RETRIEVAL IN OPTICAL SPECTROSCOPY	73
3.1. Phase retrieval using maximum entropy model	73
3.1.1. Maximum entropy model	73
3.1.2. Phase retrieval procedure	76
3.2. Phase retrieval in practice: examples	80
3.2.1. Reflection spectroscopy	80
3.2.2. Nonlinear optical spectroscopy	83
§ 4. SUM RULES	86
4.1. Sum rules in linear optics	86
4.1.1. Complex refractive index	86
4.1.2. Complex reflectance	89
4.2. Sum rules in nonlinear optics	90
§ 5. CONCLUSIONS	91
ACKNOWLEDGEMENTS	92
REFERENCES	92

III. SPECTRA OF MOLECULAR SCATTERING OF LIGHT

by I.L. FABELINSKII (MOSCOW, RUSSIAN FEDERATION)

§ 1. INTRODUCTION	97
§ 2. THE FLUCTUATIONS OF THERMODYNAMIC QUANTITIES	99
§ 3. SPECTRA OF MOLECULAR LIGHT SCATTERING ARISING FROM PRESSURE FLUCTUATIONS $\Delta\epsilon(P)$.	
EQUILIBRIUM PHENOMENA	102
3.1. Elastic thermal waves and emitter-generated acoustic waves	110
3.2. Hypersound velocity and absorption	112
3.3. Molecular light scattering spectrum and its intensity at low temperatures	114
3.4. Molecular light scattering spectra of gases	116
3.5. Molecular light scattering spectra in viscous liquids and glasses	119
3.6. Light scattering by a two media interface	122
§ 4. SPECTRA OF MOLECULAR LIGHT SCATTERING ARISING FROM PRESSURE FLUCTUATIONS $\Delta\epsilon(P)$.	
SOME NONEQUILIBRIUM PHENOMENA	124
4.1. The influence of a steady temperature gradient on the light-scattering spectra	124
4.2. Phonon “bottleneck” in acoustic paramagnetic resonance	129
4.3. Amplification of hypersound waves in piezosemiconductors subjected to an external static electric field	130

§ 5. SPECTRA OF MOLECULAR LIGHT SCATTERING ARISING FROM ISOBARIC ENTROPY FLUCTUATIONS Δε(S) AND FROM CONCENTRATION FLUCTUATIONS Δε(C)	132
5.1. Central peak: thermal diffusivity and diffusion	132
5.2. Rayleigh line and concentration fluctuations correlation radii in a critical region	140
5.3. The investigation of acoustic peculiarities in the region of critical points of the guaiacol-glycerol solution	142
5.4. The Landau-Placzek relation	148
§ 6. SPECTRA OF MOLECULAR LIGHT SCATTERING ARISING FROM ANISOTROPY FLUCTUATIONS Δε(ξ _{ik})	151
6.1. Spectrum of depolarized light scattered in liquids	151
6.2. Detection of the doublet structure of the spectrum	157
6.3. General and simplified equations describing the spectra of light scattered in liquids consisting of anisotropic molecules	169
§ 7. ABOUT SOME PROBLEMS	177
REFERENCES	178

IV. SOLITON COMMUNICATION SYSTEMS

by RENÉ-JEAN ESSIAMBRE AND GOVIND P. AGRAWAL (ROCHESTER, NY, USA)

§ 1. INTRODUCTION	189
§ 2. OPTICAL SOLITONS IN FIBERS	190
2.1. Nonlinear Schrödinger equation	190
2.2. Soliton properties	192
2.3. Adiabatic perturbation theory	195
§ 3. SOLITON-BASED COMMUNICATION SYSTEMS	196
3.1. Information transmission with solitons	196
3.2. Loss compensation	198
3.3. Amplifier noise	200
§ 4. AVERAGE-SOLITON REGIME	201
4.1. Evolution of the average soliton	201
4.2. Timing jitter	203
4.2.1. Gordon-Haus jitter	203
4.2.2. Polarization-mode dispersion jitter	204
4.2.3. Acoustic jitter	205
4.3. Soliton interaction	206
4.4. Soliton control	209
4.4.1. Optical bandpass filters	209
4.4.2. Synchronous modulators	211
4.4.3. Other techniques of soliton control	213
4.5. Experimental progress	214
§ 5. QUASI-ADIABATIC REGIME	217
§ 6. DISTRIBUTED AMPLIFICATION	221
§ 7. DISPERSION-DECREASING FIBERS	223
7.1. Basic idea	223

7.2. Timing jitter	225
7.3. Optical phase conjugation	227
§ 8. DISPERSION MANAGEMENT	229
8.1. Dispersion compensation	229
8.2. Dispersion profiling	232
§ 9. CHANNEL MULTIPLEXING	235
9.1. Wavelength-division multiplexing	235
9.1.1. Collision-induced frequency shifts	236
9.1.2. Limitations on WDM channels	237
9.1.3. Timing jitter	239
9.1.4. Dispersion management	242
9.2. Polarization multiplexing	243
§ 10. DARK-SOLITON COMMUNICATION SYSTEMS	246
10.1. Dark-soliton characteristics	246
10.2. Dark-soliton advantages	247
LIST OF SYMBOLS	249
LIST OF ACRONYMS	253
REFERENCES	254

V. LOCAL FIELDS IN LINEAR AND NONLINEAR OPTICS OF MESOSCOPIC SYSTEMS

by OLE KELLER (AALBORG, DENMARK)

§ 1. INTRODUCTION	259
§ 2. LOCAL FIELDS AND NONLOCAL OPTICS	265
2.1. Electromagnetic propagator approach	265
2.2. Electrodynamics within the framework of linear response theory	269
2.3. Local-field calculations in mesoscopic media	274
2.4. Retarded local-field interaction at distance: space and time-like couplings	281
2.5. Non-retarded self-field interaction	287
§ 3. LOCAL FIELDS IN MESOSCOPIC MEDIA WITH STRONGLY LOCALIZED ELECTRON ORBITALS	292
3.1. Short- and long-range interactions in electronically decoupled molecular systems	292
3.2. Optically dilute molecular systems; point-particle model	295
3.3. Mesoscopic media dominated by short-range interactions	299
3.4. Linear short-range interactions in two-level hydrogen-like ($1s \leftrightarrow 2p_z$) systems	302
§ 4. LOCAL FIELD ELECTRODYNAMICS IN QUANTUM WELLS AND THIN FILMS	305
4.1. Single quantum wells with 2D Bloch and free-electron dynamics	305
4.2. Local-field resonances and eigenmodes	310
4.3. Non-retarded dynamics: self-field and scalar theories	317
§ 5. 2D SPATIAL CONFINEMENT OF LIGHT BY OPTICAL PHASE CONJUGATION	324
5.1. Source field of a mesoscopic particle: attached and de-attached parts	324
5.2. Confinement by means of an ideal phase conjugator	331
ACKNOWLEDGEMENTS	337
REFERENCES	337

VI. TUNNELING TIMES AND SUPERLUMINALITY

by RAYMOND Y. CHIAO (BERKELEY, CA) AND AEPHRAIM M. STEINBERG (TORONTO, CANADA)

§ 1. INTRODUCTION	347
§ 2. A BRIEF HISTORY OF TUNNELING TIMES	350
§ 3. TUNNELING AND ITS OPTICAL ANALOGS	359
§ 4. OPTICAL EXPERIMENTS ON TUNNELING TIMES	364
4.1. Carniglia and Mandel's FTIR experiment	364
4.2. Absorptive media with anomalous dispersion	365
4.3. The Milwaukee group	367
4.4. The Florence group, part I	367
4.5. The Cologne group, part I	368
4.6. The Berkeley group	369
4.7. The Florence group, part II	374
4.8. The Cologne group, part II	375
4.9. The Vienna group	377
4.10. Deutsch and Golub's Larmor-clock experiment	378
4.11. Balcou and Dutriaux's FTIR experiment	380
§ 5. NEW THEORETICAL PROGRESS	383
§ 6. TUNNELING IN DE BROGLIE OPTICS	385
§ 7. SUPERLUMINALITY AND INVERTED ATOMS	387
§ 8. WHY IS EINSTEIN CAUSALITY NOT VIOLATED?	396
§ 9. CONCLUSION	400
ACKNOWLEDGMENTS	401
NOTE ADDED IN PROOF	401
