Contents

Preface vii

Chapter 1 Inverse Problems 1

1.1 The inverse problem of gravimetry 1
1.2 The inverse conductivity problem 5
1.3 Inverse scattering 7
1.4 Tomography and the inverse seismic problem 10
1.5 Inverse spectral problems 14

Chapter 2 Ill-Posed Problems and Regularization 20

2.1 Well- and ill-posed problems 20
2.2 Conditional correctness. Regularization 23
2.3 Construction of regularizers 26
2.4 Convergence of regularization algorithms 32
2.5 Iterative algorithms 36

Chapter 3 Uniqueness and Stability in the Cauchy Problem 39

3.1 The backward parabolic equation 39
3.2 General Carleman type estimates and the Cauchy problem 48
3.3 Elliptic and parabolic equations 53
3.4 Hyperbolic and Schródinger equations 59
3.5 Open problems 71

Chapter 4 Elliptic Equations: Single Boundary Measurements 73

4.0 Results on elliptic boundary value problems 73
4.1 Inverse gravimetry 76
4.2 Reconstruction of lower-order terms 81
4.3 The inverse conductivity problem 85
4.4 Methods of the theory of one complex variable 93
4.5 Linearization of the coefficients problem 98
4.6 Some problems of nondestructive evaluation 100
4.7 Open problems 103

Chapter 5 Elliptic Equations: Many Boundary Measurements **105**

5.0 The Dirichlet-to-Neumann map 105
5.1 Boundary Reconstruction 108
5.2 Reconstruction in Ω 112
5.3 Completeness of products of solutions of PDE 114
5.4 The plane case 118
5.5 Recovery of several coefficients 121
5.6 Nonlinear equations 127
5.7 Discontinuous conductivities 131
5.8 Maxwell's and elasticity systems 137
5.9 Open problems 141

Chapter 6 Scattering Problems **144**

6.0 Direct scattering 144
6.1 From A to near field 147
6.2 Scattering by a medium 151
6.3 Scattering by obstacles 155
6.4 Open problems 161

Chapter 7 Integral Geometry and Tomography **163**

7.1 The Radon transform and its inverse 163
7.2 The energy integrals methods 172
7.3 Boman's counterexample 175
7.4 The transport equation 179
7.5 Open problems 181

Chapter 8 Hyperbolic Equations **184**

8.0 Introduction 184
8.1 The one-dimensional case 187
8.2 Single boundary measurements 195
8.3 Many measurements: use of beam solutions 199
8.4 Many measurements: methods of boundary control 205
8.5 Recovery of discontinuity of the speed of propagation 211
8.6 Open problems 215

Chapter 9 Parabolic Equations **217**

9.0 Introduction 217
9.1 Final overdetermination 220
9.2 Lateral overdetermination: single measurements 226
9.3 Lateral overdetermination: many measurements 228
9.4 Discontinuous principal coefficient 232
9.5 Nonlinear equations 237
9.6 Interior sources 242
9.7 Open problems 244

Chapter 10 Some Numerical Methods **246**

10.1 Linearization 247
10.2 Variational regularization of the Cauchy problem 252
10.3 Relaxation methods 256
10.4 Layer-stripping 258
10.5 Discrete methods 261

Appendix. Functional Spaces **265**

References **269**

Index **283**
