

CONTENTS

VOLUME II

9	ELEMENTARY PARTICLE PHYSICS IN THE SECOND HALF OF THE TWENTIETH CENTURY	635
	<i>Val L Fitch and Jonathan L Rosner</i>	
9.1	Introduction	635
9.2	Preludes (before 1940)	637
9.3	Quantum electrodynamics	640
9.4	New forms of matter up to the mid-1960s	650
9.5	Interactions up to the mid-1960s	663
9.6	The quark revolution	684
9.7	Electroweak unification	692
9.8	Quantum chromodynamics	709
9.9	Three families of quarks and leptons	719
9.10	Accelerators	725
9.11	Detectors: from Rutherford to Charpak	744
9.12	Overlaps with other subjects	754
9.13	Unsolved problems and hopes for the future	762
9.14	Conclusions	769
10	FLUID MECHANICS	795
	<i>Sir James Lighthill</i>	
10.1	Yet another great success for twentieth century physics	795
10.2	Boundary layers and wakes; instability and turbulence; heat and mass transfer	812
10.3	Non-linear effects on the generation and propagation of waves	846
10.4	Transforming the human condition through aeronautics and ocean engineering	869
10.5	Dynamics of the Earth's fluid envelope, and its forecasting applications	887

11	SUPERFLUIDS AND SUPERCONDUCTORS	913
	<i>A J Leggett</i>	
11.1	Introduction	913
11.2	The period 1945–70	930
11.3	New developments	949
12	VIBRATIONS AND SPIN WAVES IN CRYSTALS	967
	<i>R A Cowley and Sir Brian Pippard</i>	
12.1	The beginnings of lattice dynamics	967
12.2	New experimental techniques	991
12.3	The development of lattice dynamics	997
12.4	Structural phase transitions	1007
12.5	Spin waves	1010
12.6	Magnetic phase transitions	1014
13	ATOMIC AND MOLECULAR PHYSICS	1023
	<i>Ugo Fano</i>	
13.1	Introduction	1023
13.2	Atomic–molecular physics at mid-century	1025
13.3	Completing the spectrum of radiation actions	1049
13.4	Excitation channels and resonance effects	1059
13.5	Collisions between atoms or ions	1074
13.6	Molecular physics	1081
13.7	Inner-shell phenomena	1089
13.8	Spectral fingerprints of atoms and molecules	1092
13.9	The role of atoms in metrology and instrumentation	1094
13.10	Optical handling of atomic systems and transformation of light by atoms	1097
13.11	A current overview	1101
14	MAGNETISM	1111
	<i>K W H Stevens</i>	
14.1	Introduction	1111
14.2	The period 1900–25	1113
14.3	The period 1925–50	1123
14.4	Paramagnetism	1125
14.5	Conductors	1133
14.6	1950 onwards	1136
14.7	Electron paramagnetic resonance	1137
14.8	Ferromagnetism and ferrimagnetism	1152
14.9	The changing pattern	1165
14.10	Nuclear magnetism	1171
14.11	Concluding remarks	1175

15 NUCLEAR DYNAMICS	1183
<i>David M Brink</i>	
15.1 Background	1183
15.2 Nuclear dynamics as a many-body problem	1191
15.3 The effects of World War II	1196
15.4 Technical advances	1199
15.5 Shell structure in nuclei	1208
15.6 Collective motion in nuclei	1213
15.7 Nuclear scattering and reactions	1219
15.8 New isotopes and new elements	1222
15.9 Creation of the elements	1225
16 UNITS, STANDARDS AND CONSTANTS	1233
<i>Arlie Bailey</i>	
16.1 Introduction	1233
16.2 Units and standards	1236
16.3 Physical constants	1260
16.4 Applications	1272
Illustration acknowledgments	A7
Subject index	S1
Name index	N1
VOLUME I	
Preface	ix
List of contributors	xiii
Biographical captions	xvii
1 PHYSICS IN 1900	1
<i>Sir Brian Pippard</i>	
2 INTRODUCING ATOMS AND THEIR NUCLEI	43
<i>Abraham Pais</i>	
3 QUANTA AND QUANTUM MECHANICS	143
<i>Helmut Rechenberg</i>	
4 HISTORY OF RELATIVITY	249
<i>John Stachel</i>	
5 NUCLEAR FORCES, MESONS, AND ISOSPIN SYMMETRY	357
<i>Laurie M Brown</i>
