## VOLUME III

<b>17</b>	<b>ELECTRONS IN SOLIDS</b>	<b>1279</b>
	<i>Sir Brian Pippard</i>	
17.1	The need for high-quality materials	1280
17.2	Experimental facts concerning metals	1281
17.3	Primitive models of metallic conduction	1284
17.4	Quantum theory of the electron gas	1287
17.5	Bloch's theorem and its immediate consequences	1291
17.6	Mechanisms of resistivity	1301
17.7	Umklapp processes	1304
17.8	Thermoelectric effects	1306
17.9	Interlude—Brillouin zones	1311
17.10	From generalities to particulars; the emergence of solid-state schools	1313
17.11	Early calculations of band structure	1314
17.12	Semiconductors—the early years	1317
17.13	Rectifiers and transistors	1322
17.14	Photoconductivity	1327
17.15	Semiconductor physics	1330
17.16	Hot electrons	1336
17.17	Metals in the post-war years—the impact of liquid helium	1341
17.18	Metals as individuals—the Fermi surface programme	1345
17.19	Beyond the independent-particle model	1359
17.20	Disordered materials	1365
17.21	Interference effects	1369
17.22	The two-dimensional electron gas; the quantum Hall effect	1371
17.23	Epilogue	1376

<b>18</b>	<b>A HISTORY OF OPTICAL AND OPTOELECTRONIC PHYSICS IN THE TWENTIETH CENTURY</b>	<b>1385</b>
	<i>R G W Brown and E R Pike</i>	
18.1	Introduction: classical optics up to 1900	1385
18.2	1900–30: early quantum optics	1387
18.3	1930–60: the calm before another storm	1406
18.4	1960–70: the laser and non-linear optics	1424
18.5	1970–94: a wealth of new results and applications	1452
18.6	1994 to 2000: towards the twenty-first century	1472
<b>19</b>	<b>PHYSICS OF MATERIALS</b>	<b>1505</b>
	<i>Robert W Cahn</i>	
19.1	The establishment of the foundations of a science of materials	1507
19.2	Reference works and data compilations	1509
19.3	Crystal structures	1513
19.4	The birth of physical metallurgy	1516
19.5	The birth of quantitative theory in physical metallurgy	1519
19.6	Point defects and non-metallic materials	1528
19.7	Diffusion	1531
19.8	Electrical and electro-optical ceramics and liquids	1536
19.9	Phase transformations, microstructure and modern instrumentation	1542
19.10	The physics of polymers	1550
19.11	Terms, concepts and institutions	1553
<b>20</b>	<b>ELECTRON-BEAM INSTRUMENTS</b>	<b>1565</b>
	<i>T Mulvey</i>	
20.1	Early days	1565
20.2	The magnetic electron lens	1566
20.3	Verification of Busch's theory	1569
20.4	The first two-stage electron microscope	1570
20.5	Surpassing the resolving power of the light microscope	1574
20.6	Specimen preparation and radiation damage	1574
20.7	The first serially produced TEM	1575
20.8	Electrostatic electron microscopes	1577
20.9	Abbe's optical theory and the TEM	1578
20.10	Off-axis optical beam holography	1585
20.11	Aberration-free atomic resolution in a TEM by holography	1585
20.12	Scanning electron microscopes	1586
20.13	Conclusion	1590

<b>21</b>	<b>SOFT MATTER: BIRTH AND GROWTH OF CONCEPTS</b>	<b>1593</b>
	<i>P G de Gennes</i>	
21.1	The meaning of 'soft'	1593
21.2	Polymers	1596
21.3	Liquid crystals	1603
21.4	Surfactants	1606
21.5	Colloids	1610
21.6	Concluding remarks	1613
<b>22</b>	<b>PLASMA PHYSICS IN THE TWENTIETH CENTURY</b>	<b>1617</b>
	<i>Richard F Post</i>	
22.1	Introduction	1617
22.2	Plasma physics in the first half of the twentieth century	1619
22.3	Langmuir and plasma oscillations: Landau and plasma theory	1623
22.4	The fusion and space-plasma era: circa 1950 to the present	1627
22.5	Magnetic fusion research post-1960: the long march up the $n\tau T$ slope	1645
22.6	The growth in importance of theory and computer simulation	1670
22.7	The other end of the scale: inertial confinement fusion	1673
22.8	Landmark experiments: general plasma physics	1677
22.9	Space plasma physics, the ionosphere and beyond	1682
22.10	Conclusion	1687
<b>23</b>	<b>ASTROPHYSICS AND COSMOLOGY</b>	<b>1691</b>
	<i>Malcolm S Longair</i>	
Part 1	STARS AND STELLAR EVOLUTION UP TO WORLD WAR II	1691
23.1	The legacy of the nineteenth century	1691
23.2	The origin of the Hertzsprung–Russell diagram	1692
23.3	Stellar structure and evolution	1699
Part 2	THE LARGE-SCALE STRUCTURE OF THE UNIVERSE 1900–39	1714
23.4	The structure of our Galaxy	1714
23.5	The great debate	1716
23.6	The development of relativistic cosmology	1721
Part 3	THE OPENING UP OF THE ELECTROMAGNETIC SPECTRUM	1734
23.7	The changing astronomical perspective	1734

Part 4	ASTROPHYSICS AND COSMOLOGY SINCE 1945	1746
23.8	Stars and stellar evolution since 1945	1746
23.9	The physics of the interstellar medium	1761
23.10	The physics of galaxies and clusters of galaxies	1769
23.11	High-energy astrophysics	1774
23.12	Astrophysical cosmology	1784
23.13	The classical cosmological problem	1793
23.14	Galaxy formation	1800
23.15	The very early Universe	1805
24	<b>COMPUTER-GENERATED PHYSICS</b> <i>Mitchell J Feigenbaum</i>	1823
25	<b>MEDICAL PHYSICS</b> <i>John R Mallard</i>	1855
25.1	Introduction: chronological evolution of the many branches of the field	1855
25.2	X-rays in diagnosis: diagnostic radiology	1859
25.3	X-rays in treatment: radiotherapy	1863
25.4	Radioactivity in therapy	1876
25.5	Radiation dosimetry	1880
25.6	Radiation biophysics: radiobiology	1884
25.7	Radiation protection	1889
25.8	Medical electronics	1893
25.9	Medical mechanics	1896
25.10	Radioactivity in diagnosis: nuclear medicine	1900
25.11	Medical ultrasonics	1910
25.12	Computed tomography	1916
25.13	Nuclear magnetic resonance imaging	1923
25.14	Conclusion	1933
26	<b>GEOPHYSICS</b> <i>S G Brush and C S Gillmor</i>	1943
26.1	Introduction	1943
26.2	Origin and age of the Earth (to 1935)	1944
26.3	The Earth's core and magnetism	1952
26.4	Origin and age of the Earth (after 1935)	1960
26.5	The 'revolution in the earth sciences'	1967
26.6	The Earth's upper atmosphere and geospace	1981
26.7	The ionosphere: the early days	1984
26.8	Outwards into the magnetosphere and solar-terrestrial space	2001

<b>27 REFLECTIONS ON TWENTIETH CENTURY PHYSICS: THREE ESSAYS</b>	<b>2017</b>
<b>Historical overview of the twentieth century in physics</b> <i>Philip Anderson</i>	<b>2017</b>
<b>Nature itself</b> <i>Steven Weinberg</i>	<b>2033</b>
<b>Some reflections on physics as a social institution</b> <i>John Ziman</i>	<b>2041</b>
<b>Illustration acknowledgments</b>	<b>A11</b>
<b>Journal abbreviations</b>	<b>J1</b>
<b>Subject index</b>	<b>S1</b>
<b>Name index</b>	<b>N1</b>
