

Table of Contents

0. Prologue.....	1
------------------	---

Part I. Foundations

1. Brain Dynamics and Brain Codes.....	13
1.1 Oscillations as Brain Codes	13
1.2 Resonance Phenomena	17
1.3 Global Brain Dynamics – Our Goal: A “Cloudy Description” .	17
1.3.1 Statistical Mechanics in Biology and Physics	18
2. Electrical Signals from the Brain	21
2.1 The Brain and Neurons	21
2.1.1 The Neuron Doctrine	21
2.1.2 The Organization of the Neuron	22
2.1.3 The Resting Membrane Potential	24
2.1.4 The Action Potential	24
2.1.5 Postsynaptic Potentials	25
2.2 Principles of Neural Operation	26
2.3 Recording and Classification at the Neuronal Level	27
2.3.1 Extracellular Recording	28
2.3.2 Intracellular Recording	29
2.3.3 A Brief Classification of Nerve Cell Membrane Potentials	29
2.3.4 Definition of the Poststimulus Time Histogram	30
2.4 Electrical Activity of Neural Populations	30
2.4.1 Spontaneous Electrical Activity of the Brain	31
2.4.2 Stereo-EEG (SEEG)	32
2.4.3 Evoked Potentials of the Brain	35
2.4.4 Evoked Potentials Are Descriptively Useful as Signs of Dynamics Constituting a Useful Window (Bullock’s View)	36
2.4.5 Analysis of Single EEG–EP Epochs	37

XXVI Table of Contents

3. The Brain: Sensory and Cognitive Pathways	39
3.1 Sensory-Cognitive Systems Are Organized in a Hierarchical and Parallel Fashion	39
3.1.1 Convergence and Divergence	39
3.1.2 Parallel Processing	41
3.2 Functional Neuroanatomy of the Auditory Pathway	41
3.2.1 Remarks about Variability in the Human Auditory Areas	47
3.3 Anatomy and Physiology of the Visual Pathway	47
3.4 Thalamic Organization and Cortico-Thalamic Circuits and Global Function of the Thalamus	51
3.5 Cerebral Cortex: Anatomy and Global Function	54
3.5.1 Distributed Cortical Systems	58
3.5.2 Association Cortex and Frontal Lobe	59
3.6 Hippocampus: A Supramodal Polysensory System	62
3.6.1 Anatomical Description: Hippocampus and Limbic System	63
3.6.2 A Brief Review of the Function of the Hippocampus .	66
3.6.3 Electrophysiology of the Hippocampus	67
3.6.4 Types of Hippocampal Theta Rhythm	68
3.6.5 Output of the Hippocampal Formation	69
3.6.6 Brainstem Modulation of the Hippocampus	69
3.7 Reticular Formation	70
3.7.1 Anatomy	70
3.7.2 Global Function	71
3.7.3 Is the Reticular Formation a Polysensory High Command Structure?	72
4. Brain Dynamics Research Program	
by E. Başar, V. Kolev and J. Yordanova	75
4.1 Introduction	75
4.2 The Concept “System”	76
4.2.1 State of a System	78
4.2.2 The “Black Box” and the “White Box”	78
4.2.3 The Concept of the “Gray Box”	79
4.2.4 The “Black Box” and “Gray Box”: Approaches to Exploring Brain Function	79
4.3 Abstract Methods for Brain System Analysis	80
4.3.1 Abstract Methods for Brain State Analysis	80
4.3.2 Abstract Methods of General Systems Theory	86
4.3.3 New Methods for Studying Oscillatory Brain Potentials	99
4.4 Specific Methods for Analysis of Living Systems	101
4.4.1 Application of Pharmacological Agents	101
4.4.2 Partial Injury of the System	101
4.4.3 Reduction of the System to Its Passive Response . . .	102

Table of Contents XXVII

4.5	Methods of Thought, or Research Principles	103
4.5.1	Going into the System	103
4.5.2	Going out of the System	103
5.	Wavelet Analysis of Brain Waves	
	by T. Demiralp, A. Ademoğlu, M. Schürmann and E. Başar	107
5.1	Utility and Main Advantages of the Wavelet Method	107
5.2	Description of the Method	108
5.2.1	Spline Basis Functions	108
5.2.2	Discrete B-Splines	109
5.2.3	Spline Wavelet Transform	110
5.3	Results of Wavelet Analysis of EPs	113
5.3.1	Typical Animal	113
5.3.2	Wavelet Analysis of Single Trials	117
5.4	Interpretation of Wavelet Analysis	118
5.5	Role of Wavelet Transform Methods in the Analysis of Functional ERP Components	119
5.6	Selectively Distributed Oscillatory Systems in the Brain	121
6.	Phase Locking of Oscillatory Responses: An Informative Approach for Studying Evoked Brain Activity	
	by V. Kolev, J. Yordanova and E. Başar	123
6.1	Introduction	123
6.2	Phase-Locked and Non-Phase-Locked Activity	123
6.3	Phase-Locked Activity in the Averaged EPs	124
6.4	Method	125
6.4.1	Identification of Phase Relationships in Single Sweeps ..	125
6.4.2	Stability of Phase Locking	125
6.4.3	Quantitative Assessment of Phase Locking	127
7.	Resonance Phenomena in the Brain, Physical Systems, and Nature	129
7.1	What Is Resonance?	129
7.2	Pioneer Experiments on EEG Brain Resonance Phenomena ..	130
7.2.1	Visual Cortex, Light Stimulation	130
7.2.2	Auditory Cortex, Acoustical Stimulation	134
7.3	The Transfer Function Reflects the Behavior of Resonant Single Epochs	135
7.4	Multiple Resonances in Different EEG Frequency Bands	136
7.5	Resonance in Technical Systems	137
7.6	Resonance in the Brain as a Modern View	144

Part II. Renaissance of the EEG and Oscillations

8. Event-Related Oscillations in the Brain	
by E. Başar and S. Karakaş	147
8.1 Induced Rhythms: A Widespread, Heterogeneous Class of Oscillations.....	147
8.2 Induced Rhythms: The View of Bullock	148
8.3 Pioneering Studies on Induced Rhythms	150
8.4 Event-Related Oscillations and Induced Rhythms as Important Leitmotifs in this Book.....	151
9. Correlation Between Unit Activity and Activity of Neural Populations	153
9.1 Around 10 Hz: Oscillation in Neural Response Following Light Stimulation.....	154
9.2 Experiments on the Cat Lateral Geniculate Nucleus (Alpha and Beta Responses)	158
9.3 The View of Verzeano.....	160
9.4 The Gamma Band	162
9.5 The 10 Hz and 6 Hz States at the Membrane Level: The View of Llinás	164
9.6 Intrinsic 10 Hz Oscillations of Neocortex Generated by Layer 5 Pyramidal Neurons	165
9.7 The Most Recent Developments	167
10. Chaos in Brain Function	
by E. Başar and R. Quijan Quiroga	169
10.1 Deterministic Chaos	169
10.1.1 Chaos in Everyday Experience	170
10.2 The EEG has Strange Attractors: The EEG is not Noise	171
10.2.1 Some Preliminary Remarks on the Nonlinear Approach to EEG and Brain Function	172
10.3 New Types of Expressions	172
10.4 Correlation Dimension	176
10.4.1 Computation of the Correlation Dimension	176
10.5 Typical Examples of Chaotic Behavior of EEG	178
10.5.1 Results During Slow-Wave Sleep: Cat Cortex, Hippocampus	178
10.5.2 Very High Frequency Behavior of the Cat's Cerebellar Cortex and Brainstem	180
10.5.3 Hippocampal Theta Activity: Transitions	183
10.5.4 Correlation Dimension of Alpha Activity: Brain Alpha Attractor	184

10.5.5 An Overview of EEG Investigations by Means of the Correlation Dimension: A Limited State of the Art	188
10.6 Lyapunov Exponents.....	190
10.6.1 Calculating Lyapunov Exponents: The Wolf Method ..	191
10.7 Lyapunov Exponents Applied to Brain Activity	191
10.7.1 Epilepsy	192
10.7.2 Sleep	192
10.7.3 Other Studies	193
10.8 Words of Caution and Remarks Concerning Future Research .	193

Part III. Resonance as the Basic Mechanism of Oscillatory Responses

11. Brain Synergetics: Frequency Locking of EEG: Order Out of Chaos	199
11.1 Evoked Frequency Locking.....	199
11.1.1 Frequency Domain Comparison of EEG and EP	199
11.1.2 Frequency Locking in the Reticular Formation and Inferior Colliculus During the Waking Stage	201
11.1.3 Frequency Locking in the Alpha Band in the Auditory Cortex.....	206
11.2 What Does “Evoked Frequency Locking” Add to Our Knowledge? Further Demonstration of the Important Relation Between EEG and EPs.....	207
11.2.1 Remarks on the Methodology	207
11.2.2 The Frequency Stabilization Factor	209
11.3 Sensory-Induced Frequency Locking.....	210
11.4 Working Hypothesis on the Relation Between EPs and the EEG	211
11.5 Synergetics and Laser Theory	214
11.6 The New EP Concept: Contribution of Different EP Components to the Original Averaged EP	215
12. Major Operating Rhythms (MOR) Control the Shape and Time Course of Evoked Potentials	
by E. Başar, S. Karakaş, E. Rahn and M. Schürmann.....	219
12.1 Introduction	219
12.2 A New Approach: An Algorithm for Selective Averaging	220
12.3 Dependence of EP Amplitudes and Waveforms on the Prestimulus EEG. I. Vertex Recordings	221
12.3.1 Auditory Evoked Potentials.....	221
12.3.2 Visual Evoked Potentials	224
12.4 Dependence of EP Amplitudes and Waveforms on the Prestimulus EEG. II. Frontal Visual Evoked Potentials	227

XXX Table of Contents

12.5 Discussion	230
12.5.1 Inverse Relation Between EEG and Visual EP May Lead to a New Standardization in EP Measurements ..	230
12.5.2 Comments on Experimental Design	231
12.5.3 Frequency Content of EPs from Different Locations: Major Operating Rhythms (MORs).....	233
12.5.4 MOR of Occiput and Central Region (Vertex)	234
12.5.5 Comparison with Results of Other Laboratories on EEG and EP/ERP Relationships	235
12.5.6 Functional Significance of the EEG-EP Interrelation ..	237
12.6 Conclusion	238
 13. Oscillatory Brain Responses: Changes with Development and Aging	
by J. Yordanova, V. Kolev and E. Başar	239
13.1 The Aim of the Chapter	239
13.2 Methodological Remarks	239
13.2.1 Analysis of Single-Sweep Amplitude and Enhancement	240
13.2.2 Analysis of Single-Sweep Phase-Locking	241
13.2.3 Statistical Analysis	241
13.3 Spontaneous and Evoked Alpha Activity at Occipital Sites in Three Age Groups	242
13.4 A Comparative Analysis of Frontal Versus Occipital 10 Hz Activity in Young and Middle-Aged Adults	244
13.5 Single-Sweep Analysis of Visual EPs in Young and Middle-Aged Adults	245
13.6 The Age-Related Changes in the Alpha Activity of the Brain	250
13.7 Alpha Response System and Frontal Lobe Functioning in Aging	251
 14. Brain Response Susceptibility	
by E. Başar, J. Yordanova and V. Kolev	253
14.1 Excitability of the Brain: Spontaneous EEG Rhythms and Evoked Responses	253
14.2 Brain Response Susceptibility	255
14.2.1 EEG in Children Might Provide a Useful Natural Model for Testing the Hypothesis for Brain Response Susceptibility	255
14.2.2 Aging- and Topology-Related Changes in Alpha Activity and Brain Response Susceptibility	259
14.2.3 Sleep vs. Vigilance Differences as a Model for Brain Response Susceptibility	261
14.2.4 Pharmacological and Pathological Modulation of Response Susceptibility	261
14.3 Internal Evoked Potentials	261

14.4 Is the Alpha Activity a Control Parameter for Brain Responses?.....	262
14.4.1 Models of Alpha Generators	262
14.4.2 Alpha Frequency as a Brain Code	263
14.4.3 A New Insight into the Age-Related Changes in the Alpha Activity of the Brain	263
15. The Evoked Potential Manifests a Superposition of Event-Related Oscillations	265
15.1 The Human Evoked Response Contains Multiple Oscillatory Responses	265
15.1.1 Two Types of Response Oscillations: Superposition Principle of Various EP Components in the Human Brain	266
15.2 P300 Response Manifests Superposition of Frequency Responses: Delta Response can be Isolated	269
15.2.1 Single-Trial ERP Analysis	269
15.3 P300-like Responses to NON-TARGET Stimuli.....	273
15.3.1 Benefits of the Delta Response Metric	273
16. Multiple Sclerosis: Break of the Alpha Response by C. Başar-Eroğlu, M. Schürmann and E. Başar	275
16.1 Introduction	275
16.2 Visual Stimulation: Results	276
16.2.1 Visual EPs: Component Analysis by Means of Amplitude–Frequency Characteristics (Single Subjects and Mean Values); Statistical Evaluation ..	277
16.2.2 Visual EPs: Component Analysis by Means of Digital Filtering	278
16.3 Discussion of Results upon Light Stimuli	282
16.3.1 Functional Interpretation of Topographic Differences of Evoked Oscillations in Cross-Modality Experiments and Functional Deficits in MS	282
16.4 Responses to Auditory Stimulation: Rationale, Results, and Comparison to Visual Stimulation	283
16.4.1 Auditory EPs: Component Analysis by Means of Digital Filtering	284
16.4.2 Responses to Auditory Stimulation in Relation to Responses to Visual Stimulation	284
16.5 Alpha Responses in Multiple Sclerosis: A Pathophysiological Investigation in the Framework of Brain Dynamics Concepts .	286

XXXII Table of Contents

17. Brain Feynman Diagrams	287
17.1 Brain State Matrix: A Proposal to Approach Brain Function by Using EEG-EP Feynman Diagrams	287
17.2 Major Operating Rhythms (MORs) are to be Considered in Building Feynman Diagrams	291
18. Oscillatory Components of Evoked Potentials are Real Brain Responses Related to Function by E. Başar and M. Schürmann	293
18.1 Evoked Potentials are Ensembles of Brain Event-Related Oscillations in the Alpha, Theta, Delta, and Gamma Ranges .	293
18.1.1 Justification for the Component Analysis of Evoked Potentials by Means of Digital Filtering	294
18.1.2 Frequency Analysis of Evoked Potentials Gives a “Cloudy Idea” in the Sense of Quantum Physics .	295
18.1.3 Real Oscillatory Responses are Manifested Only in Major and Dominant Changes in the Oscillatory Responses	296
18.2 The Alpha Response in Cross-Modality Measurements	296
18.2.1 Intracranial EEG-EP Measurements in Cats (Auditory and Visual Cortex)	297
18.2.2 Alpha Responses in Human EEG and MEG in Cross-Modality Experiments.....	302
18.2.3 Break of the Alpha Response in Multiple Sclerosis Patients in Light of Cross-Modality Experiments	307
18.2.4 Summary: Oscillatory Responses in Cross-Modality Experiments.....	308
18.3 Hippocampal Alpha Responses as Real Brain Oscillatory Responses	309
18.4 “Pure” Theta Responses	312
18.5 Delta Response: Examples from Experiments with “Cognitive” Paradigms	314
18.6 Application of Pharmacological Agents	316
18.7 EP Recordings in Children	318
18.8 Hippocampal EPs: Related to Measurements at the Cellular Level and Significant for the Question of Volume Conduction	319
18.8.1 Hippocampal EPs in Comparison to Measurements at the Cellular Level	319
18.8.2 Hippocampal EPs and the Question of Volume Conduction	320
18.8.3 Summary Concerning Hippocampal EPs	322
18.9 Wavelet Analysis	323
18.9.1 10 Hz Frequency Range	323
18.9.2 Delta Frequency Range: P300	323

Table of Contents XXXIII

18.10 Defined Brain States Show Oscillatory Behavior Without Filtering	324
18.11 Frequency Components of Evoked Potentials: Not Harmonics but Real Brain Responses	324
 19. Conclusion	
by E. Başar and S. Karakaş	327
Toward a Theory of Brain Oscillations	327
 References	331
 Author-Index	357
 Subject Index	361
