Preface	xiii	
List of Contributors	xvii	
<b>1</b>	<b>PROPERTIES OF CRYOGENIC FLUIDS</b>	
	<i>V. Arp and J. G. Weisend II</i>	1
1-1	Introduction	1
1-2	Thermophysical Properties of Fluids	1
	1-2-1 Fluid State Properties	2
	1-2-2 Thermal Conductivity and Viscosity	18
	1-2-3 Computer Programs for Fluid Properties	21
1-3	Tabular Data for Particular Fluids	21
1-4	Sources for Fluid Property Computer Programs	71
	References	71
<b>2</b>	<b>PROPERTIES OF CRYOGENIC MATERIALS</b>	
	<i>T. H. K. Frederking, R. Flükiger, J. L. Hall, J. A. Barclay, X. Y. Liu, G. Hartwig, and V. L. Morris</i>	73
2-1	Friction Coefficients and Related Phenomena	
	<i>T. H. K. Frederking</i>	73
	2-1-1 Introduction	73
	2-1-2 Phenomena of Static and Dynamic Friction	74
	2-1-3 Experimental Methods	78
	2-1-4 Friction Data	80
	2-1-5 Magnet Tribology and Related Parameters	83

## vi CONTENTS

	Acknowledgments	89
	Nomenclature	90
	References	90
2-2	Composite Materials	
	<i>V. L. Morris</i>	92
	2-2-1 Introduction	92
	2-2-2 Composite Materials	92
	2-2-3 Structural Design	96
	2-2-4 Composite Structure Uses	98
	Nomenclature	101
	References	102
2-3	Critical Current-Density in Bi,Pb(2223) Tapes	
	<i>R. Flükiger</i>	103
	2-3-1 Introduction	103
	2-3-2 Fabrication of Bi-2223 Tapes	103
	2-3-3 Variation of $j_c(B)$ for Multifilamentary Bi-2223 Tapes	108
	2-3-4 Conclusion	110
	References	111
2-4	Magnetic Materials for Cryogenic Refrigeration	
	<i>J. L. Hall, J. A. Barclay, and X. Y. Liu</i>	112
	2-4-1 Introduction	112
	2-4-2 Classification of Magnetic Refrigerant Materials	114
	2-4-3 Representative Magnetic Refrigerant Data	115
	2-4-4 Passive Magnetic Regenerator Materials	115
	Nomenclature	118
	References	119
2-5	Cryogenic Properties of Polymers	
	<i>G. Hartwig</i>	121
	2-5-1 Introduction	121
	2-5-2 Accuracy of Data	122
	2-5-3 Sample Treatments and Their Influence on Cryogenic Properties	123
	2-5-4 Cryogenic Applications of Polymers	123
	2-5-5 Scientific Aspects of Low-Temperature Polymer Investigations	124
	2-5-6 Glass Transitions and Properties	127
	2-5-7 Damping Behavior	127
	2-5-8 Deformation Behavior	130
	2-5-9 Dielectric Permittivity	134
	2-5-10 Fracture Behavior	135
	2-5-11 Fatigue Behavior	137
	2-5-12 Thermal Vibrations of Polymers	138
	2-5-13 Specific Heat	139
	2-5-14 Thermal Expansion	141
	2-5-15 Thermal Conductivity	145
	2-5-16 Gas Permeability	147
	2-5-17 Radiation Damage	151
	Nomenclature	156
	References	156
	Bibliography	157
	Appendix	158

<b>3</b>	<b>CRYOGENIC HEAT TRANSFER</b>	
	<i>P. Kittel, T. Nast, L. J. Salerno, M. Shiotsu, and J. G. Weisend II</i>	163
3-1	Introduction	163
3-2	Conduction Heat Transfer	163
	3-2-1 Thermal Conductivity Integrals	
	<i>J. G. Weisend II</i>	163
	3-2-2 Thermal Contact Conductance	
	<i>L. J. Salerno and P. Kittel</i>	164
	Nomenclature	178
3-3	Convection Heat Transfer	178
	3-3-1 Correlations for Forced Convection Heat Transfer	
	<i>J. G. Weisend II</i>	178
	Nomenclature	180
	3-3-2 Predicting the Critical Heat Flux for a Horizontal Cylinder in Saturated Liquid He I	
	<i>M. Shiotsu</i>	181
	Nomenclature	185
3-4	Radiation Heat Transfer	186
	3-4-1 Multilayer Insulation Systems	
	<i>T. Nast</i>	186
	Nomenclature	200
	Acknowledgments	200
	References	200
<b>4</b>	<b>CRYOGENIC INSTRUMENTATION</b>	
	<i>D. S. Holmes and S. S. Courts</i>	203
4-1	Measurement Systems	203
	4-1-1 Balanced Design of a Measurement System	203
	4-1-2 Defining the Measurement	204
	4-1-3 Selecting a Sensor	205
	4-1-4 Measurement Uncertainty	206
	4-1-5 Sources of Measurement Uncertainty	207
	4-1-6 Other Measurement System Considerations	211
4-2	Temperature Measurement	216
	4-2-1 Metallic Resistors	219
	4-2-2 Semiconducting Resistors	222
	4-2-3 Semiconductor Diodes	227
	4-2-4 Capacitors	228
	4-2-5 Thermocouples	229
	4-2-6 Self-Heating of Temperature Sensors	231
	4-2-7 Temperature Sensor Calibration	234
4-3	Strain Measurement	234
4-4	Pressure Measurement	236
	4-4-1 Piezoresistive or Strain Gauge Pressure Sensors	237
	4-4-2 Capacitance Pressure Sensors	241
	4-4-3 Variable Reluctance Pressure Sensors	241
	4-4-4 Piezoelectric Pressure Sensors	241

## viii CONTENTS

4-5	Flow Measurement	242
	4-5-1 Mass Flowmeters	242
	4-5-2 Volumetric Flowmeters	243
	4-5-3 Differential Pressure Flowmeters	245
4-6	Liquid Level Measurement	247
4-7	Magnetic Measurements	248
	4-7-1 Hall Effect	248
	4-7-2 Induction Coils	249
	4-7-3 Magnetoresistance	249
	4-7-4 NMR	249
	4-7-5 SQUIDS	250
4-8	Others Measurements	250
	References for Section 4-8	251
4-9	Commercial Sources	252
	Nomenclature	253
	References	253
<b>5</b>	<b>CRYOSTAT DESIGN</b>	
	<i>G. McIntosh</i>	259
5-1	Introduction	259
5-2	Materials	260
	5-2-1 Austenitic Stainless Steels: Types 304, 304L, 304N, 316, 316L, and 321	260
	5-2-2 Nickel Steels: Primarily 9% Nickel Steel	260
	5-2-3 Aluminum Alloys: Alloys 1100, 3003, 6061, 6063, and 5083	261
	5-2-4 Copper: Commercial Alloys CDA 101 (OFHC), 110 (ETP), and 120 (Phosphorous Deoxidized)	261
	5-2-5 Fiber-Epoxy Composites: NEMA Grades G-10-CR, G-11-CR, and Others	261
	5-2-6 Other Structural Materials: Titanium, Invar, Maraging Steels, Hastelloy Alloys	262
5-3	Cold Seals	263
5-4	Cryostat and Dewar Supports	267
5-5	Helium Cryostat and Dewar Design with Vapor-Cooled Shields	268
5-6	Vacuum-Jacketed Transfer Line Design	269
	References	278
<b>6</b>	<b>REFRIGERANTS FOR NORMAL REFRIGERATION</b>	
	<i>W. E. Kraus and M. Kauschke</i>	279
6-1	Introduction	279
6-2	Classification of Refrigerants	279
	6-2-1 General	279
	6-2-2 Isomers	280
	6-2-3 R4XX: Refrigerant Mixtures (Blends)	280
	6-2-4 R5XX: Azeotropic Refrigerant Mixtures	282
	6-2-5 Butane Compounds	282
	6-2-6 R7XX: Inorganic Compounds	282

6-3	Environmental Impact of Refrigerants	283
6-4	Selection of Refrigerants	284
	References	285
<b>7</b>	<b>SMALL CRYOCOOLERS</b>	
	<i>L. Duband and A. Ravex</i>	287
7-1	Introduction	287
7-2	Thermodynamic Considerations of Cryocoolers	288
	7-2-1 Theoretical Reversible Cycles	288
	7-2-2 Joule–Thomson Expansion	293
7-3	Inefficiencies and Parasitic Losses in Real Cryocoolers	295
	7-3-1 Piston Motion	296
	7-3-2 Dead Volumes	297
	7-3-3 Pressure Drop	297
	7-3-4 Nonisothermal Operation	297
	7-3-5 Regenerator or Counterflow Heat Exchanger Inefficiency	297
	7-3-6 Thermal Losses	298
	7-3-7 Conclusion	298
7-4	Cryocoolers: Applications and State of the Art	299
	7-4-1 Joule–Thomson Expansion Cryocoolers	299
	7-4-2 Gifford–McMahon Cryocoolers	302
	7-4-3 Compound Gifford–McMahon and Joule–Thomson Cryocoolers	306
	7-4-4 Stirling Cryocoolers	308
7-5	Future Trends in Cryocooler Development	311
	7-5-1 Magnetic Materials for Regenerators	312
	7-5-2 Gas Mixtures for Joule–Thomson Expansion Coolers	313
	7-5-3 Pulse-Tube Refrigerators	314
	7-5-4 Adsorption Coolers	318
7-6	Choosing a Cryocooler	319
	Nomenclature	319
	References	320
<b>8</b>	<b>SUPERCONDUCTING MAGNET TECHNOLOGY</b>	
	<i>A. Devred, H. Desportes, F. Kircher, C. Lesmond, C. Meuris, J. M. Rey, and J. L. Duchateau</i>	321
8-1	Introduction	321
8-2	General Properties of Superconductors	322
	8-2-1 Critical Parameters	322
	8-2-2 Different Types of Superconductors	323
8-3	Practical Superconducting Materials	325
	8-3-1 Niobium Titanium	325
	8-3-2 Niobium Tin and Niobium Aluminum	326
	8-3-3 Conductor Assembly	329
8-4	Conceptual Design of Superconducting Magnets	330
	8-4-1 User’s Specifications	330
	8-4-2 First Design Approach	331

## x CONTENTS

8-4-3	Conceptual Choices	331
8-4-4	Complete Design	333
8-5	AC Losses	334
8-5-1	Superconducting Magnetization	334
8-5-2	Coupling Current Losses in Composites and Cables	337
8-6	Thermal Stability	340
8-6-1	General Stability Concepts	341
8-6-2	Stability Criteria of Windings Cooled by Helium Channels	342
8-6-3	Stability of Internally Cooled Conductors	344
8-7	Electrical Insulation	346
8-7-1	Specification	346
8-7-2	The Different Insulation Materials	346
8-7-3	Temperature Dependence of the Insulation Material Properties	347
8-7-4	Influence of the Cooling Technique on the Insulation	348
8-7-5	Impregnated Superconducting Coils	348
8-8	Quench Protection	349
8-8-1	Quench Mechanism	349
8-8-2	Maximum Temperature and Voltage	350
8-8-3	Protection Techniques	353
8-9	Some Applications	356
	Nomenclature	361
	References	363
	Bibliography	364
<b>9</b>	<b>CRYOGENIC EQUIPMENT</b>	
	<i>D. E. Daney, J. E. Dillard, and M. D. Forsha</i>	365
9-1	Cryogenic Transfer Systems	365
9-1-1	Introduction	365
9-1-2	Pressure Drop	369
9-2	Pumps	380
9-2-1	Introduction	380
9-2-2	Centrifugal Pumps	381
9-2-3	Positive Displacement Pumps	392
9-3	Cold Compressors	393
9-3-1	Introduction	393
9-3-2	Turbo Compressors	395
9-3-3	Ejectors	398
9-4	Current Leads	399
9-4-1	Introduction	399
9-4-2	Conduction-Cooled Current Leads	403
9-4-3	Gas-Cooled Current Leads	404
9-4-4	Hybrid Current Leads	408
9-5	Heat Exchangers	413
9-5-1	Introduction	413
9-5-2	Types of Heat Exchangers	415
9-5-3	Heat Exchanger Design	423
9-5-4	Regenerator Design	429

9-5-5	Heat Transfer Coefficients and Pressure Drop	430
	Nomenclature	436
	References	438
<b>10</b>	<b>He II (SUPERFLUID HELIUM)</b>	
	<i>S. W. Van Sciver</i>	443
10-1	Introduction	443
10-2	Properties of He II	444
	10-2-1 Phase Diagram	444
	10-2-2 State Properties	445
	10-2-3 Transport Properties	450
	10-2-4 Surface Heat Transfer	460
10-3	Technology of He II Applications	463
	10-3-1 Refrigeration Techniques	463
	10-3-2 Heat Exchangers	466
	10-3-3 Pumping Methods	470
	10-3-4 He II Flowmetering Techniques	475
10-4	Summary	478
	Nomenclature	478
	References	479
<b>11</b>	<b>SAFETY</b>	
	<i>F. J. Edeskuty and M. Daugherty</i>	481
11-1	Introduction	481
11-2	Sources of Hazards	481
11-3	Physiological Hazards	481
	11-3-1 Cold Damage to Living Tissue	482
	11-3-2 Asphyxiation	483
	11-3-3 Toxicity	484
11-4	Physical (or Mechanical) Hazards	484
	11-4-1 Embrittlement	484
	11-4-2 Buildup of Pressure	486
	11-4-3 Condensation of Atmospheric Gases and Higher-Boiling Substances	491
	11-4-4 Stresses Caused by Thermal Contraction	492
11-5	Combustion Hazards	494
	11-5-1 Fuels (Hydrogen and LNG)	495
	11-5-2 Oxidizers	495
11-6	Regulations, Standards, and Guidelines	496
11-7	Conclusions	497
	References	498
	<b>INDEX</b>	499
