Prologue: The Voyage in EEG	1
--	----------

Part I. Dynamics of Electrical Signals in the Animal Brain

1. Dynamics of Potentials in the Visual and Auditory Pathway, Hippocampus, and Reticular Formation of the Cat Brain .	19
1.1 Surgery, Experimental Conditions, and Raw EEG	19
1.2 Sensory Pathways in the Cat Brain	20
1.3 Evoked Potentials to Auditory Stimulation in the Cat Brain – Time Domain	22
1.4 Evoked Potentials to Visual Stimulation in the Cat Brain – Time Domain	23
1.5 Amplitude–Frequency Characteristics Obtained with Auditory Stimulation	23
1.5.1 Auditory Cortex	24
1.5.2 Medial Geniculate Nucleus	25
1.5.3 Mesencephalic Reticular Formation	26
1.5.4 Inferior Colliculus	26
1.5.5 Hippocampus	26
1.5.6 Cerebellar Cortex	26
1.6 Amplitude–Frequency Charateristics: Visual Stimulation ..	28
1.6.1 “Filtered Potentials”	29
1.7 Coherence Functions Between All Possible Pairings of Recording Electrodes–Auditory Stimulation	29
1.8 Phase Synchronization Demonstrated by Phase Spectra – Auditory Stimulation	30
1.9 Coherence Functions Between All Possible Pairings of Recording Electrodes–Visual Stimulation	32
1.10 Phase Synchronization Demonstrated by Phase Spectra – Visual Stimulation	34

XXVIII Table of Contents

2. Cross-Modality Experiments on the Cat Brain by Erol Başar, Tamer Demiralp, Martin Schürmann, and Canan Başar-Eroğlu	37
2.1 Introduction	37
2.2 What Are Multimodal Recognition and Cross-Modality Attention? View of Hartline	37
2.3 The Present Chapter Combines Cross-Modality Experiments, Frequency Analysis, and Wavelet Transform Approaches	39
2.4 Results	40
2.4.1 Averaged EPs (Single Animal, Grand Average)	40
2.4.2 Amplitude–Frequency Characteristics	42
2.4.3 Results of Digital Filtering	43
2.4.4 Results of Wavelet Analysis of EPs	46
2.4.5 Statistical Comparison of Results of Wavelet and Frequency Analysis	49
2.5 Single-Trial Analysis of EPs	49
2.5.1 Example of Single-Trial Analysis	49
2.5.2 Wavelet Analysis of Single-Trials	51
2.6 Physiological Implications of Cross-Modality Experiments	51
2.6.1 Hippocampus Is a Supramodal Center	54
2.6.2 Possible Functional Roles of Evoked Alpha Oscillations	54
2.7 EP/ERP Frequency Components – “Real Components” Related to Psychophysiological Functions	55
2.8 Monomodal vs. Bimodal Stimulation	56
 3. Selectively Distributed Gamma-Band Responses Studied in Cortex, Reticular Formation, Hippocampus, and Cerebellum by Martin Schürmann, Tamer Demiralp, Canan Başar-Eroğlu, and Erol Başar	61
3.1 Gamma Responses to Auditory Stimuli Recorded from Various Structures	62
3.2 Gamma Responses to Visual Stimuli Recorded from Various Structures	65
3.3 Gamma Responses – Multiple Functional Correlates	67
 4. Highest Frequency Range in Reticular Formation and Inferior Colliculus (100–1000 Hz)	69
4.1 Introduction	69
4.2 Selectively Averaged Transient Evoked Potentials	70
4.3 Amplitude–Frequency Characteristics	70
4.4 Consistent Selectivities in the Highest Frequency?	72
4.5 Very High Frequency Responses in the Human Brain	73

5. The Brain of the Sleeping Cat: Dynamics of Electrical Signals	75
5.1 Some Sleep Stages of the Cat	75
5.1.1 Spindle Sleep Stage	75
5.1.2 Slow Wave Sleep Stage	77
5.2 Evoked Potentials During Sleep Stages	78
5.3 Amplitude-Frequency Characteristics During Sleep Stages	79
5.3.1 Spindle Sleep (SS) Stage	79
5.3.2 Slow Wave Sleep (SWS) Stage	81
5.4 Application of Combined Analysis Procedure to the Spontaneous and Evoked Activities	83
5.4.1 Simultaneously Recorded and Filtered EEG-EP Epochs (1–45 Hz)	83
5.4.2 The Coherence Functions Between All Possible Pairings of Recording Electrodes	85
5.5 Further Comments on the Component Analysis and the Real Responses in Evoked Potentials	87
5.6 Interpretation of Results on Stereodynamics in the Auditory Pathway During the Slow Wave Sleep Stage	88
5.6.1 Synchronization and Coupling of Resonances in the Responses of Various Brain Centers in Alpha and Beta Frequency Ranges	88
5.7 Human Frequency Responses During SWS Sleep	89
6. Dynamics of Potentials from Invertebrate Brains	
by Atsuko Schütt, Theodore H. Bullock, and Erol Başar	91
6.1 Introduction	91
6.2 Anatomy and Physiology of the Invertebrate (Gastropods) Nervous System	92
6.2.1 The Abdominal Ganglia Complex	93
6.2.2 The Pedal and Buccal Ganglia	94
6.2.3 Microscopic Anatomy	94
6.3 Materials and Methods	94
6.4 Results	95
6.4.1 Ongoing Compound Field Potentials	95
6.4.2 Spikes	96
6.4.3 Relationship Between EEG of Vertebrates and Field Potential Fluctuations of Invertebrates	97
6.5 Potentials Evoked by Means of Electrical Stimulation	101
6.5.1 <i>Aplysia</i>	101
6.5.2 <i>Helix Pomatia</i>	101
6.6 Gamma (30–50 Hz) Activity	104
6.7 Neurochemical Modulation	105
6.8 Unsolved Problems	108

XXX Table of Contents

7. Dynamics of Potentials from the Brain of Anamniotes (Vertebrates)	
by Erol Başar, Atsuko Schütt, and Theodore H. Bullock	109
7.1 Introduction	109
7.2 Methods	109
7.2.1 Ray	109
7.2.2 Goldfish	110
7.3 Results	110
7.3.1 Ray	110
7.3.2 Goldfish	111
7.4 The Reasons for Neuroethological Comparison	114
7.5 Similarities and Differences	115
7.5.1 Unsolved Questions	116
8. Frequency Response of the Cat Brain Is Influenced by Pharmacological Agents	
by Canan Başar-Eroğlu, and Erol Başar	117
8.1 Effects of Ceruletide in the Brain	117
8.2 Methodological Remarks on Experiments with Pharmacological Agents (Haloperidol, Neostigmine, Acetylcholine)	118
8.2.1 Experimental Procedure and Data Analysis	118
8.3 Auditory EPs (AEPs) upon Application of Cerulein, Haloperidol, and Neostigmine	119
8.4 Amplitude-Frequency Characteristics	120
8.5 Interpretation of Pharmacologically Induced Changes by Application of Cerulein, Neostigmine, and Haloperidol	121
8.6 The Utility of Frequency Analysis to Neuropharmacological research	124

Part II. The Human Brain: Dynamics of EEG, Evoked Potentials, and MEG

9. Evoked Alpha and Theta Responses in Humans to Auditory and Visual Stimuli	
by Martin Schürmann and Erol Başar	129
9.1 Subjects, Methods, Environment	130
9.1.1 Evoked Potentials: Auditory and Visual Stimuli	130
9.1.2 Frequency-Domain Approach to Evoked Potentials ..	131
9.1.3 Component Analysis by Means of Digital Band-Pass Filtering	136
9.2 Brain Resonance Phenomena and their Manifestation in Evoked Potentials	139

9.3	Single EEG-EP Epochs, Averaged EPs, and AFCs for the Study of Brain Resonance Phenomena	141
9.4	Functional Correlates of Theta and Alpha EP Components in Responses to Inadequate and Adequate Stimuli	141
9.5	Prospective and Future Research	142
9.6	Conclusions	142
10.	"Cross-Modality" Experiments in Humans	
	by Erol Başar and Martin Schürmann	143
10.1	Analysis of Evoked Potentials and Their Frequency Characteristics: Auditory and Visual Stimuli	144
10.2	Filtered Evoked Potentials	147
10.3	Cross-Modality Responses Analyzed with Single EEG-EP Sweeps	148
10.4	Immediate Interpretation of Cross-Modality Experiments	149
10.5	Cat Intracranial Recordings Support the Results from Human Data	150
10.6	Physiological Implications of "Cross-Modality" Experiments: Possible Functional Roles of Induced Rhythmicities	151
10.7	Responses to Adequate and Inadequate Stimuli in MEG Recordings in Human Subjects	152
10.8	Further Thoughts Concerning Functional Correlates of Theta and Alpha Responses	152
11.	The Bisensory Evoked Theta Response – A Correlate of Supramodal Association?	
	by Oliver W. Sakowitz and Erol Başar	155
12.	Evoked Delta Oscillations on the Hearing Threshold	
	by Ralph Parnefjord and Erol Başar	161
12.1	Slow Wave Oscillations at Hearing Level: An Individual Experiment	161
12.2	AEP Investigations at the Threshold Level	162
12.3	Experimental Procedure	163
12.3.1	The Threshold Experiment:	164
12.4	Brain Response to Auditory Stimuli with Different Intensities	164
12.4.1	Time Domain Averages	164
12.4.2	Digitally Filtered AEPs	165
12.4.3	Grand Average Amplitude–Frequency Analysis	167
12.4.4	Selectively Filtered Auditory EPs	169
12.4.5	Frequency Distribution in Single Subjects	170
12.5	Has the Frequency Shift a Sensory–Cognitive Interpretation?	172
12.5.1	Possible Origin of the Delta Response	173
12.5.2	The Decision-Memory System	174

XXXII Table of Contents

13. Evoked Oscillations in Magnetoencephalography	177
13.1 Technical Remarks and Advantages of MEG	177
13.2 Neural Currents Underlying the ECD	179
13.3 The Electric and Magnetic Alpha: A Comparative Study of Auditory and Visual Evoked Fields	180
13.4 Evoked Fields to Sensory Stimulation: Alpha Response	181
13.4.1 Methods	181
13.5 Human MEG Responses – Temporoparietal Versus Occipital Alpha and Delta-Theta Responses	181
13.6 Evidence of 10 Hz and 5 Hz Evoked Magnetic Rhythm	186

Part III. Cognitive Processes

14. Selective Attention and Memory: Neurophysiology and Cognitive Psychology	193
14.1 Background and Perspective	193
14.2 Comparative Studies	195
14.3 Concept of Selective Attention and P300	196
14.4 Visual Selective Attention	197
14.4.1 Selective Attention: Experiments with Monkeys	199
14.5 Stages of Memory Processing: Encoding, Storage, and Retrieval	202
14.6 Encoding and Sensory Register	202
14.7 Memory	203
14.7.1 Short-Term Memory	204
14.7.2 Long-Term Memory	204
14.8 Pattern Recognition	205
15. Memory Templates in Event-Related Oscillations, P300, MMN	207
15.1 Remarks on Family of P300 Responses: ERPs	207
15.2 Experimental Setup and Paradigms	208
15.2.1 Paradigm 1 – Oddball	209
15.2.2 Paradigm 2 – Oddball with Increased Certainty of Alternating Targets	210
15.3 Frequency Analysis of ERPs: Preliminary Results	211
15.3.1 Comparative Analysis of Poststimulus Frequency Changes Under Different Experimental Conditions and Their Contribution to Different Latency Peaks ..	213
15.3.2 Formation of Peaks	215
15.3.3 Comparison of ERP Responses to Regular and Random Infrequent Target Stimuli	216
15.4 Orientation Reaction and Learning During Repetitive Stimulation	218

15.5 Analysis of Pre- and Poststimulus Activity in Single Sweeps: “Preparation Rhythms”	219
15.6 Event-Related Theta Oscillations	220
15.7 Event-Related 10 Hz Oscillations	221
15.8 The Modulation of P300 Activity by Preparation Rhythms	222
15.9 P300, Prestimulus EEG Activity and Their Relation to Short-Term Memory: Memory Templates	223
15.10 Theta and Alpha Oscillations in Klimesch’s Memory Model	224
15.11 Habituation	224
15.12 Appendix: Frequency Analysis of MMN	225
15.12.1 MMN Formation of Peaks	226
 16. Dynamics of Compound Potentials (P300) in Freely Moving Cats	
by Canan Başar-Eroğlu and Erol Başar	229
16.1 Introduction	229
16.2 Methods and Paradigms Utilized for Obtaining P300 from Freely Moving Cats	229
16.3 Systematic Analysis of the Effect of Omission Rate on ERPs Recorded from the Cat Hippocampus	231
16.4 Utility of Analysis in the Frequency Domain	234
16.5 Multiple Electrodes in the Hippocampus	235
16.6 Hippocampal P300 and Its Cognitive Correlates: The Theta Component in the CA3 Layer	240
 17. The Compound P300–40 Hz Response of the Cat Hippocampus	
by Canan Başar-Eroğlu and Erol Başar	243
17.1 The P30–40 Hz Compound Potential	243
17.2 Gamma Activity in Earlier Studies	247
 18. Event-Related Potentials During States of High Expectancy: Results on the Cat Hippocampus, Cortex, and Reticular Formation	249
18.1 Neuronal Activity of the Hippocampus During Learning, Searching, and Decision Making	249
18.1.1 Unit Activity and Behavior	250
18.1.2 Multiple Sensory–Behavioral Correlates in Single Neurons – Theta Cells in the Hippocampus: View of Ranck	250
18.1.3 Training-Induced Increase in Hippocampal Unit Activity: View of Thompson	251
18.1.4 Signal Detection in the Hippocampus	251
18.2 Event-Related Potentials in Cortex and Hippocampus in a P300-like Paradigm	254

XXXIV Table of Contents

18.3 Frequency Responses During States of “High Expectancy”	255
18.3.1 Time-Domain Analysis of the Responses to the 1st, 2nd, 3rd, and 4th Stimuli Preceding the Omitted Stimulus	255
18.3.2 Frequency-Domain Analysis by Means of the AFCs	256
18.3.3 The Differences Between AFCs of Responses to 1st, 2nd, and 4th Stimuli Preceding the Omitted Stimulus	257
18.3.4 Adaptive Digital Filtering of the Responses and Statistical Testing of the Results	258
18.4 Selectively Distributed Theta System of the Brain: The Limbic, Frontal, and Parietal Areas Are Mainly Involved	262
18.4.1 Frequency Selectivity of the Amplitude Enhancements in Hippocampus	262
18.4.2 Comments on the Anatomical and Physiological Links Between the Hippocampal Formation and the Association Areas of the Neocortex	263
18.4.3 The Integrative Analysis of the Increased Theta Response in the Brain: Diffuse Theta Response System in the Brain	264
18.5 Interpretation of Changes in ERPs	265
18.6 Why We Compare EP Results with Conventional Experiments on Hippocampus	267
 19. Event-Related Potentials During States of High Expectancy and Attention in Human Subjects	
by Tamer Demiralp and Erol Başar	269
19.1 Selective Theta Distribution	269
19.2 Experimental Paradigm	270
19.3 ERPs to Repetitive Stimuli	270
19.3.1 Averaged Responses	272
19.3.2 Adaptive Filtering of Respectively Applied Evoked Responses	275
19.4 Increase in Theta Components Is Highest in Frontal Recordings	281
19.5 In Visual Modality the Secondary Dominant Theta Increase Occurs in the Parietal Recordings	281
19.6 The Cognitive Theta Components of ERPs as a Sign of Hippocampocortical Interaction	282
19.7 Concluding Remarks	282

20. Topological Distribution of Oddball “P300” Responses	
by Erol Başar, Tamer Demiralp and Canan Başar-Eroğlu	283
20.1 Experimental Paradigm	283
20.2 Topological Differences Between AFCs of AEPs	283
20.3 Differences Between Time-Domain Grand Averages and AFCs of Responses in the Three Paradigms	284
20.4 Adaptive Filtering of the Responses	285
20.5 The “Selectively Distributed Theta-Response System in the Brain” and the Corticohippocampal Interaction	289
20.6 Paradigms Used	289
20.6.1 Oddball Paradigm	289
20.6.2 Paradigm with Omitted Fourth Signal and to-Be-Attended 3rd Signal	290
21. Wavelet Analysis of Oddball P300	
by Tamer Demiralp, Ahmet Ademoglu, and Erol Başar	293
21.1 Results	293
21.2 The P300 Wave Can Be Detected in the Single-Trial ERPs by the Spline Wavelet Coefficients in the Delta Frequency Range.....	299
21.3 The Response-Based Classification of the ERP Trials Yields Enhanced P300 Amplitudes Compared with the Average of the Target Responses	300
21.4 A Functional Interpretation	301
21.5 The Number of Sweeps Containing a P300 Wave May Be Used as an Additional Measure in ERP Analysis	302
22. Dynamic Memory Manifested by Induced Alpha.....	303
22.1 Why Look for Internal Event-Related Oscillations?	303
22.2 Coherent and Ordered States of EEG due to Cognitive Tasks	303
22.2.1 Preliminary Experiments and Method.....	303
22.2.2 Preliminary Results in Special Cases	304
22.2.3 Global Trends of Pretarget Event-Related Rhythms. Expectation and Reaction of Subjects; Subject Variability	305
22.3 Paradigms with Increasing Probability of Occurrence.....	306
22.4 Experiments with Light Stimulation	310
22.4.1 Examples of Experiments with Varied Probabilities of Stimulus Occurrence	310
22.5 Long-Standing Experiments with Subject A.F.	317
22.6 Quasi-deterministic EEG, Cognitive States, Dynamic Memory	318
22.6.1 What Is New in the “Dynamics of Time-Locked EEG Patterns”	320
22.7 Appendix	320

XXXVI Table of Contents

23. Event-Related Oscillations as a Strategy in Cognition Research	323
23.1 Generalization of Cognitive Responses: Advantages of the Brain Dynamics Research Program and the Concept of Event-Related Oscillations	323
23.2 Component Analysis Towards Functional Understanding During Cognitive Processes	325

Part IV. Integrative Systems in Brain Function

24. Functional Alphas Selectively Distributed in the Brain – A Theory	331
24.1 The EEG 10 Hz Band Rhythms Classified	331
24.2 Why the Expression “Alphas”?.....	332
24.3 Alphas and Alpha Activity Revisited.....	333
24.4 Some Physiologically Based Theories on the Generation of Alpha Rhythms	334
24.4.1 The Facultative Pacemaker Theory	334
24.4.2 The Scope of Lopes da Silva and Coworkers.....	335
24.4.3 Survey by Andersen and Andersson	336
24.5 Multifunctional and Selectively Distributed 10 Hz Oscillations – A New Survey.....	338
24.6 Secondary Alpha Response or Alpha Response with Delay ...	345
24.7 Synopsis on Multiple Functions of “Alphas”	348
24.7.1 Memory Mechanisms and Alpha.....	348
24.7.2 Alpha as Sensory Response	349
24.7.3 Alpha and Motor Processes	349
24.7.4 Association Mechanisms and Attention	349
24.8 “Alphas” Selectively Distributed in the Brain	350
24.9 An Integrative Theory of Alphas	351
25. Theta Rhythms in Integrative Brain Function	353
25.1 Functional Importance of Theta Rhythms	353
25.1.1 A Summary of Theta Rhythms in the Limbic System .	353
25.2 Earlier Experiments on Induced or Evoked Theta Oscillations	356
25.3 Correlating with Orienting: Review by Miller	357
25.4 Theta Activity in the Prefrontal Cortex	358
25.5 Miller’s Description of the Relation of Intracellular Potentials to EEG Activity in the Theta EEG Activity	359
25.6 Selectively Distributed and Induced Theta Oscillations in the Brain; A Theory	365

26. Gamma-Band Responses in the Brain: Functional Significance	
by Canan Başar-Eroğlu, Erol Başar, Martin Schürmann, Atsuko Schütt, Daniel -Strüber, Michael Stadler, and Sirel Karakaş	367
26.1 Historical Note: Four Phases of Pioneering Studies Related to the Gamma Band	368
26.2 A Classification of Gamma-Band Activities by Galambos	369
26.3 40 Hz Responses at the Cellular Level	369
26.4 40 Hz Responses in Field-Potential Recordings: Sensory and/or Cognitive Processes?	370
26.4.1 Measurements in Animals	370
26.4.2 Measurements in Humans	373
26.5 Functional Interpretation of 40 Hz Responses in Light of Comparative Data	377
26.5.1 The Binding Problem: Gamma-Band-Induced Rhythm as a Mechanism of Feature-Linking in the Visual Cortex	377
26.5.2 The Diffuse and Selectively Distributed Gamma System of the Brain	378
26.5.3 Conclusion	380
27. Structures, Brain Waves, and Their Functions	381
27.1 Parallel Processing – A Principle of Brain Function Accessible to Investigation by Means of Field Potentials and EEG	381
27.2 The Basic Cortical Circuit and Cortical Oscillatory Responses	382
27.3 Thalamus: Sensory Gate for the Alpha Response	385
27.3.1 Classical Thalamocortical Projection	385
27.4 Hippocampus	387
27.4.1 Hippocampus as “Supramodal Structure”	387
27.4.2 Cross-Modality Experiments	388
27.5 Frontal Cortex	389
27.6 Cerebellum	390
28. Brain Functioning: Integrative Models	
by Erol Başar and Martin Schürmann	393
28.1 EEG Frequencies as General Operators	393
28.2 Do EEG Frequencies Reflect Repertoires of Higher Brain Function?	394
28.3 From “Functional EEG Modules” to “Selectively Distributed Frequency Systems” in the Brain	395
28.3.1 Does Cortico-Cortical communication between EEG Modules in the Distant Parts of the Cortex Exist?	398
28.4 Tentative Conclusions	398
28.4.1 Activation of Alpha System with Light	400

XXXVIII Table of Contents

28.4.2 Activation of the Alpha System with Auditory Stimulation	402
28.4.3 Activation of Theta and Delta Systems.....	402
28.4.4 Experiments with Focused Attention	402
29. EEG and Event-Related Oscillations as Brain Alphabet ..	407
29.1 The Integrative Character of the Compound Potential EP ..	407
29.2 Compound P300 Potential	408
29.3 A Cognitive Input Reduces the Compound Potentials to Almost Homogeneous Oscillatory Responses	409
29.4 How Is a Compound EP Almost Reduced to Homogeneous Oscillatory Response Potential in the Delta Frequency Range? 410	410
29.5 Event-Related Rhythms in 5 Hz and 10 Hz: Reduction of the Compound Potential by Topological Differentiation	410
29.6 Brain Codes: Brain Alphabet EEG?	411
29.7 Examples of the Brain Alphabet EEG.....	413
29.8 The Concept of “EEG Codes” as an Important Step Towards the New Integrative Neurophysiology	413
29.9 Thoughts Concerning the So-Called Grandmother Cell	414
29.10 Possible Operator Properties of EEG Frequencies	415
30. Event-Related Oscillations in Brain Function	417
30.1 Selectively Distributed Theta Oscillations: Properties, Functions, and Hypotheses	417
30.1.1 Properties	417
30.1.2 Functions	418
30.1.3 Hypotheses	419
30.2 Selectively Distributed Alpha Oscillations: Properties, Functions, and Hypotheses	420
30.2.1 Properties and Functions	420
30.2.2 Hypotheses	422
30.3 Functions and Hypotheses Related to the Selectively Distributed Gamma Oscillations	423
30.3.1 Hypotheses	424
30.4 Selectively Distributed Delta Oscillations: Functions and Hypotheses	426
30.5 Conclusion: Multiple Functions	426

Part V. Conclusion

31. An Integrative Neurophysiology Based on Brain Oscillations	
by Erol Başar and Sirel Karakaş	429
31.1 Oscillations Govern the General Transfer Functions in Neural Tissues of the Brain	429
31.2 Brain Oscillatory Theory and Functional Interpretations	431
31.2.1 Spontaneous Oscillations	431
31.2.2 The Origin of Event-Related Oscillations	431
31.2.3 Functional Interpretation	432
31.2.4 The Approaches of Relevance	434
31.2.5 Final Conclusion	434
32. A “Neurons–Brain” Doctrine: New Thoughts	435
33. Epilogue: EEG Oscillations in Integrative–Cognitive Neurophysiology	437
