Contents

1. Introduction 1

2. Reflectivity of X-Rays from Surfaces 5
2.1 Basic Principles 5
2.2 Multiple Interfaces 11
2.3 Roughness 14
2.4 Arbitrary Density Profiles 26

3. Reflectivity Experiments 33
3.1 Experimental Considerations 33
3.1.1 Resolution Functions 36
3.1.2 Data Correction and Parameter Refinement 41
3.2 Examples of Soft-Matter Thin Film Reflectivity 43
3.2.1 Polymer Films 44
3.2.2 Liquid Films on Solid Substrates 58
3.2.3 Liquid Films on Liquid Surfaces 65
3.2.4 Langmuir–Blodgett Films 68

4. Advanced Analysis Techniques 75
4.1 The Kinematical Approximation 75
4.1.1 Asymmetric Profiles: A Closer Look 78
4.1.2 Unique Profiles 80
4.2 The "Phase-Guessing" Inversion Method 81
4.3 Other Data Inversion Techniques 86

5. Statistical Description of Interfaces 91
5.1 Correlation Functions 91
5.2 Transformation to Reciprocal Space 94
5.3 Some Examples 96
5.3.1 Self-Affine Surfaces 96
5.3.2 K-Correlation Functions 98
5.3.3 Capillary Waves and Polymer Surfaces 100
5.4 Vertical Roughness Correlations 109

6. Off-Specular Scattering 113
6.1 Theory 113
6.1.1 Kinematical Formulation 114
6.1.2 Distorted-Wave Born Approximation 116
6.1.3 Soft-Matter Surfaces 119
6.2 Experiments 123
6.2.1 Polymer Films 124
6.2.2 Liquid Thin Films 132
6.2.3 Langmuir–Blodgett Films 135
6.2.4 Roughness Propagation in Soft-Matter Films 139

7. X-Ray Scattering with Coherent Radiation 151
7.1 Coherent versus Incoherent Scattering 152
7.2 General Formalism 154
7.3 Coherent Scattering from Surfaces 160
7.4 Future Developments 165

8. Closing Remarks 169

A. Appendix 171
A.1 The Hilbert Phase of Reflection Coefficients 171
A.2 The Formalism of the DWBA 172
A.3 Exact Formulas for Coherent X-Ray Scattering 174
A.4 Diffusive Particle Motion and XPCS 176
