List of Figures	ix
Introduction	1
I Preliminaries	11
1 Physical Reality, Corpuscular Models, Continuum Models	13
2 Classical Continuum Theory	20
2.1. Kinematics	20
2.2. Balance Equations	22
2.3. Jump Conditions	31
2.4. Frames, Frame Indifference, Objectivity	31
2.5. Constitutive Equations, Well-Posedness of Boundary-Value Problems	35
2.6. Representation Theorems	35
2.7. Thermodynamic Processes	36
3 Viscous and Inviscid Fluids and Elastic Solids	41
3.1. Fluids	41
3.2. Solids	44
4 Kinetic Theory	48
4.1. Collision Operator	49

4.2. The H-Theorem	51
4.3. Maxwellian Distribution	53
4.4. Slight Disequilibrium	53
4.5. Dense Gases	56
5 Classical Theory of Solutions	59
II Continuum Theory	63
6 Continuum Balance Equations for Multicomponent Fluids	65
6.1. Multicomponent Mixtures	65
6.2. Kinematics	67
6.3. Balance Equations	68
6.4. Multicomponent Entropy Inequalities	74
7 Mixture Equations	81
III Averaging Theory	85
8 Introduction	87
8.1. Local Conservation Equations	88
8.2. Jump Conditions	89
8.3. Summary of the Exact Equations	91
9 Ensemble Averaging	92
9.1. Results for Ensemble Averaging	99
10 Other Averages	105
10.1. Multiparticle Distribution Functions	106
10.2. Time Averaging	114
10.3. Volume Averaging	116
10.4. Desiderata	120
11 Averaged Equations	121
11.1. Averaging Balance Equations	121
11.2. Definition of Average Variables	122
11.3. Averaged Balance Equations	126
12 Postulational and Averaging Approaches	131
IV Modeling Multicomponent Flows	135
13 Introduction	137

14 Closure Framework	140
14.1. Completeness of the Formulation	140
14.2. Constitutive Equations	141
14.3. Forms for Constitutive Equations	144
14.4. Entropy Restrictions	147
15 Relation of Microstructure to Constitutive Equations	153
15.1. Averaging Techniques	154
15.2. Cell Model	159
15.3. Inviscid Fluid Flowing Around a Sphere	162
15.4. Viscous Flow Around a Sphere	177
16 Maxwell–Boltzmann Dynamics	193
16.1. Collision Effects	194
16.2. Fluid Velocity Effects	194
17 Interfacial Area	199
17.1. Geometry Models	200
17.2. Evolution of Geometric Statistics	205
17.3. Average Geometrical Properties	210
17.4. A Coalescence and Breakup Model and Geometry	217
17.5. Conclusion	220
18 Equations of Motion for Dilute Flow	221
18.1. Constitutive Equations	221
18.2. Dispersed Flow Equations of Motion	231
V Consequences	235
19 Nature of the Equations	237
19.1. Special Cases of the Equations	238
20 Well-Posedness	243
20.1. Formulation	243
20.2. Characteristic Values	244
20.3. The Simplest Model	248
20.4. Effect of Viscosity	249
20.5. Inertial Effects	251
20.6. Summary Observations	252
21 Solutions for Shearing Flows	254
21.1. Field Equations	255
21.2. Kinematics and Dynamics of Shearing Flow	258

22 Wave Dynamics	273
22.1. Introduction	273
22.2. Acoustic Propagation	274
22.3. Volumetric Waves	282
22.4. Characteristics and Linear Stability	284
22.5. Inlet Step Response	288
22.6. Nonlinear Waves	293
References	297
Index	303
