Contents

1. Introduction 1
1.1 The HERA Machine 1
1.2 The H1 and ZEUS Detectors 1
1.3 Kinematics 3

2. Theoretical Framework 9
2.1 Deep Inelastic Scattering 9
2.2 Evolution Equations 11
2.3 The DGLAP Equations 13
2.4 The BFKL Equation 16
2.5 The Interest in Small x 18
2.6 Hadronic Final States 23

3. Inclusive Cross-Sections 27
3.1 The Structure Function F_2 27
3.2 QCD Analysis of F_2 30
3.3 The Longitudinal Structure Function F_L 31
3.4 $\sigma_{\mathrm{tot}}^{\gamma^* p}$ and the Transition
Between DIS and Photoproduction 34

4. Models for Hadron Production in DIS 35
4.1 Reference Frames 35
4.2 Kinematics and Variables 37
4.3 Simple Mechanisms for Hadron Production 38
4.4 Perturbative QCD Radiation 41
4.5 Hadronization 46
4.6 Rapidity Gaps 51
4.7 Monte Carlo Generators 54

5. General Event Properties 57
5.1 Energy Flow 57
5.2 Charged Particle Multiplicities 60
5.3 Charged Particle Momentum Spectra 68
5.4 Strangeness Production 76

5.5 Charm Production 78
5.6 Bose–Einstein Correlations 84

6. The Quark Fragmentation Region 87
6.1 Charged Particle Spectra 87
6.2 Event Shapes 97

7. Jets 103
7.1 Introduction 103
7.2 Jet Algorithms 104
7.3 Jet Shapes 104
7.4 The Strong Coupling α_s 105
7.5 The Gluon Density 111
7.6 Jet Rates at Low Q^2 113

8. Low-x Physics 119
8.1 Introduction 119
8.2 Energy Flows 121
8.3 Transverse Momentum Spectra 128
8.4 Forward Jets 134
8.5 Summary and Outlook 136

9. Instantons 139
9.1 Introduction 139
9.2 Instanton Theory 139
9.3 Instantons at HERA 141
9.4 Experimental Signatures 144
9.5 Searches for Instanton Processes 147
9.6 Conclusion 150

10. Summary 151
