<b>Preface to the English Edition</b>	<b>v</b>
<b>Preface to the Russian Edition</b>	<b>vi</b>
<b>From the Editor</b>	<b>x</b>
<b>I     The Main Boundary Value Problems in the Nonlinear Theory of Shallow Shells</b>	<b>1</b>
1.     Results from the Theory of Surfaces . . . . .	1
2. <i>S</i> -Coordinates in Space. Formation of a Shell. Components of Finite Deformation in <i>S</i> -Coordinates and Their Simplification .	14
3.     The Kirchhoff–Love Hypotheses. Their Mathematical and Mechanical Content. Computation of Deformations of a Shallow Shell Using the Kirchhoff–Love Hypotheses . . . . .	19
4.     Potential Energy of Deformation of a Shallow Shell . . . . .	26
5.     Independent Displacements, Generalized Stresses and the Work of External Forces Under the Kirchhoff–Love Hypotheses	33
6.     Boundary Value Problems in Displacements of the Moderate Bending Theory for Shallow Shells . . . . .	36
7.     Boundary Value Problems with Airy Stress Function in the Moderate Bending Theory for Shallow Shells . . . . .	44
8.     Some Remarks on Nonlinear Shallow Shell Theory. A Historical Survey . . . . .	56
<b>II    General Mathematical Questions</b>	<b>60</b>
9.     Some General Mathematical Results . . . . .	60

10.	General Mathematical Results (Continued) . . . . .	73
11.	The Function Spaces $H_t$ , $t = 5, 6, 7, 8$ . Properties of Their Elements	82
12.	The Function Spaces $H_\kappa$ , $\kappa = 1, 2, 3, 4$ . Properties of Their Elements	96
<b>III Topological Methods Applied to Solvability of the Main Boundary Value Problems of the Nonlinear Theory of Shallow Shells in Displacements</b>		<b>107</b>
13.	The Generalized Formulation of Boundary Value Problems in Displacements. Reduction to Operator Equations. The Physical Meaning of Generalized Solutions . . . . .	107
14.	Some Properties of the Operators $K_{t\kappa}$ , $G_{\kappa\kappa}$ . . . . .	116
15.	Computation of the Winding Number of the Vector Field $w - G_{\kappa\kappa}(w)$ on Spheres of Large Radius in $H_\kappa$ : Preliminary Lemmas	123
16.	Computation of the Winding Number of the Vector Field $w - G_{\kappa\kappa}(w)$ on Spheres of Large Radius in $H_\kappa$ . Solvability of the Main Boundary Value Problems in Displacements . . . . .	130
<b>IV The Topological Method in the Problem of Solvability of the Main Boundary Value Problems in the Nonlinear Theory of Shallow Shells with an Airy Stress Function</b>		<b>145</b>
17.	The Generalized Formulation of the Boundary Value Problems of Shallow Shells with an Airy Stress Function. Reduction to Operator Equations. Physical Interpretation of Generalized Solutions	145
18.	Main Properties of the Operators $K_{9\kappa}(w)$ , $G_\kappa(w)$ . . . . .	153
19.	Computation of the Winding Number of the Vector Field $w - G_\kappa(w)$ on Spheres of Large Radius in $H_\kappa$ . Solvability of the Main Boundary Value Problems of the Theory of Shallow Shells with an Airy Stress Function . . . . .	159
20.	Differentiability Properties of Generalized Solutions of the Problems $t\kappa$ and $9\kappa$ . Conditions for the Existence of Classical Solutions	169
<b>V The Variational Approach to the Problem of Solvability of Boundary Value Problems of Nonlinear Shallow Shell Theory</b>		<b>181</b>
21.	The Variational Approach to the Problem of Solvability of Boundary Value Problems of Nonlinear Shallow Shell Theory in Displacements	181
22.	The Variational Approach to the Problem of Solvability of Boundary Value Problems of Nonlinear Shallow Shell Theory with an Airy Stress Function . . . . .	195

<b>VI</b>	<b>Numerical-Analytical Methods in the Nonlinear Theory of Shallow Shells</b>	<b>206</b>
23.	Expansion in Powers of a Small-parameter (Nonsingular Solutions)	206
24.	Expansion in Powers of a Small-parameter (Singular Solutions). The Liapunov–Schmidt Method . . . . .	212
25.	The Newton–Kantorovich Method	219
<b>VII</b>	<b>Direct Methods in the Nonlinear Theory of Shallow Shells</b>	<b>229</b>
26.	Variational Methods for Approximate Solutions of Problems $t\kappa$ ( $\kappa = 1, 2, 3, 4$ ; $t = 5, 6, 7, 8$ ). The Version of Papkovich .	229
27.	The Bubnov–Galerkin–Ritz Method for Approximate Solution of Problems $t\kappa$ ( $\kappa = 1, 2, 3, 4$ ; $t = 5, 6, 7, 8$ ). The Versions of Mushtari and Vlasov	240
28.	Error Estimates for the Bubnov–Galerkin–Ritz (BGR) Method in Some Problems of the Nonlinear Theory of Shallow Shells .	251
<b>VIII</b>	<b>Formulation of the Problem of Stability. Global Uniqueness of Solutions. Stiffness of Shells. Well-Posedness Classes</b>	<b>263</b>
29.	Formulation of the Problem of Stability in the Nonlinear Theory of Shallow Shells. Local Uniqueness of Solutions. Conditions for Global Uniqueness	263
30.	Physical Stiffness of Shells. Connection with Geometrical Stiffness of the Middle Surface	273
31.	Well-Posedness of Problems of the Nonlinear Theory of Shallow Shells: Its Relation to Physical Stability . . . . .	281
<b>IX</b>	<b>Stability in the Large of the Membrane State of a Shallow Shell. Existence of the Lower Critical Value</b>	<b>296</b>
32.	Momentless State of Shells. Passage to the Linearized Problem. Spectral Properties of the Linearized Problem . . . .	296
33.	Global Stability of Shells in Problems $t\kappa$ . Existence of Lower Critical Numbers. Some Estimates for $U$ -Decompositions . . .	306
34.	Global Stability of Shells in Problems $9\kappa$ . Existence of Lower Critical Values. Some Estimates for $U$ -Decompositions . . . .	320
35.	Bifurcation of Solutions in a Neighborhood of the Momentless State	325
36.	Variational Methods in Global Stability of Shallow Shells . . .	330
37.	Some Problems of Global Stability of Plates	336
<b>X</b>	<b>A Probabilistic Approach to the Problem of Stability of Shallow Shells</b>	<b>343</b>
38.	A Probabilistic Model of Operations of a Shallow Shell Under Moderate Bending	343

<b>Some Unsolved Problems of the Mathematical Theory of Shells</b>	<b>353</b>
<b>References</b>	<b>355</b>
<b>List of Symbols</b>	<b>375</b>
<b>Index</b>	<b>381</b>
