
TABLE OF CONTENTS

Introduction	v
1 HARD SUPERCONDUCTORS	
1.1 Viscous flow of magnetic flux; pinning	3
1.2 Critical state of hard superconductors	15
1.3 Resistive state of hard superconductors	24
2 STRUCTURE AND PHYSICAL CHARACTERISTICS OF COMPOSITE SUPERCONDUCTORS	
2.1 Composite superconductors	40
2.2 Physical properties of the elements of composite superconductors	45
2.3 Physical properties of superconducting composites	57
3 LOSSES IN SUPERCONDUCTORS	
3.1 Qualitative theory	68
3.2 Hysteretic loss	81
3.3 Losses in composite superconductors ($a \ll R$)	91
3.4 Losses in composite superconductors ($a \sim R$)	102

3.5 Losses in composite superconductors carrying a transport current	111
3.6 Losses in <i>in situ</i> formed composite superconductors	115
4 STABILITY OF THE CRITICAL STATE	
4.1 Qualitative theory of magnetic flux jumping	127
4.2 Hard superconductors ($\tau \ll 1$)	143
4.3 Composite superconductors ($\tau \gg 1$)	159
4.4 Limited magnetic flux jumping in hard superconductors	176
4.5 Current-carrying capacity of composite superconductors	181
4.6 Thermochemical plastic flow instability in composite superconductors	186
4.7 Thermomagnetomechanical instability and the training of superconductors	193
5 SUPERCONDUCTING TO NORMAL TRANSITION	
5.1 Heat equilibrium in current-carrying superconductors	206
5.2 Propagation of the boundary between normal and superconducting states	215
5.3 Resistive domains	228
5.4 Superconducting to normal transition initiated by a thermal pulse	239
5.5 Localization of normal phase in inhomogeneous superconductors	253
5.6 Dynamic phenomena in superconductors containing the resistive phase	271
5.7 Superconducting to normal transition in composite superconductors with high contact resistance	287
6 HIGH-TEMPERATURE SUPERCONDUCTIVITY	
6.1 High-temperature superconductors	303
6.2 Physical properties of the elements of composite superconductors at liquid nitrogen temperatures	313
6.3 Stability of the superconducting state of high -temperature superconductors	319
6.4 Superconducting to normal transition in the presence of a transport current	327
