# **ELECTRON TRANSFER REACTIONS IN SOLUTION: A HISTORICAL PERSPECTIVE**

**NORMAN SUTIN**

*Chemistry Department, Brookhaven National Laboratory,  
Upton, New York 11973-5000*

## **CONTENTS**

- I. Introduction
- II. The Beginning
- III. Outer-Sphere Electron Transfer Reactions
  - A. Adiabatic Outer-Sphere Electron Transfer
  - B. Adiabatic and Nonadiabatic Limits
  - C. Comparisons with Experiment
- IV. Weak- and Strong-Coupling Limits
- V. Optical and Thermal Electron Transfer
- VI. Inner-Sphere and Mixed-Valence Systems
  - A. Reactivity Patterns
  - B. Distance Dependence of Electron Transfer
- VII. Quantum-Mechanical Descriptions
- VIII. Conclusions
- Acknowledgments
- References

# ELECTRON TRANSFER—FROM ISOLATED MOLECULES TO BIOMOLECULES

M. BIXON AND JOSHUA JORTNER

*School of Chemistry, Tel Aviv University, Ramat Aviv, 69978 Tel Aviv, Israel*

## CONTENTS

- I. Prologue
- II. Origins of the Theory of Electron Transfer and Other Radiationless Processes in the Condensed Phase
- III. Quantum Effects on Electronic and Nuclear Coupling
- IV. Nonadiabatic Multiphonon Processes
- V. Basic Electron Transfer Theory
  - A. Elementary Description of Rates
  - B. Some Features of the Electronic Coupling
  - C. Dynamic-Spectroscopic Relations for Electronic Coupling in Ground and Excited Electronic States
  - D. Nuclear Franck-Condon Factors
  - E. Mode-Specific Electron Transfer
  - F. Line Shapes and Mode-Selective Intramolecular Coupling
  - G. Control of Electron Transfer
- VI. Electron Transfer and Intramolecular Radiationless Transitions
- VII. Long-Range Electron Transfer in Isolated Solvent-Free Supramolecules
  - A. Structural-Energetic Constraints
  - B. Electron or Hole Transfer in Charged Systems
  - C. Isolated-Molecule Electron Transfer Rates
  - D. Energy Gap Law
  - E. Vibrational Energy Dependence of Intramolecular Electron Transfer Rates
  - F. Intramolecular IVR and Electron Transfer
  - G. Mediated Long-Range Electron Transfer
- VIII. Solvent Relaxation Dynamics and Electron Transfer
  - A. The Weak Excess Vibrational Energy Dependence of Activationless Electron Transfer Rates
  - B. Slow and Fast Medium-Induced Relaxation

---

*Advances in Chemical Physics, Volume 106, Electron Transfer—From Isolated Molecules to Biomolecules, Part One*, edited by Joshua Jortner and M. Bixon. Series Editors I. Prigogine and Stuart A. Rice.

ISBN 0-471-25292-1 © 1999 John Wiley & Sons, Inc.

- C. The Inverted Region
- D. When Will Solvent-Dynamic Control of Electron Transfer Be Manifested?
- IX. The Franck–Condon Quasicontinuum
  - A. Correlation Parameters
  - B. Ultrafast Electron Transfer Dynamics on the Time Scale of Nuclear Motion
- X. Vibrational Coherence in Electron Transfer Dynamics
- XI. Electron Transfer via Bridges
- XII. Primary Charge Separation in Photosynthesis
- XIII. Epilogue
  - A. Digression on the History of Electron Transfer Research
  - B. Coherent versus Incoherent Electron Transfer
  - C. Electron Transport in DNA
  - D. Time-Resolved Electron Transfer in Isolated Supramolecules
  - E. Ultrafast Condensed-Phase Electron Transfer Dynamics
  - F. Electronic Dynamics in Electron Transfer

# CHARGE TRANSFER IN BICHROMOPHORIC MOLECULES IN THE GAS PHASE

DONALD H. LEVY

*Department of Chemistry and The James Franck Institute,  
University of Chicago, Chicago, Illinois 60637*

## CONTENTS

- I. Introduction
- II. Electron Transfer in Bichromophoric Ions
- III. Photoinduced Charge Separation in Neutral Bichromophores
- IV. Charge Transfer in van der Waals Complexes
- V. Charge transfer in Tolunitrile
- Acknowledgments
- References

# LONG-RANGE CHARGE SEPARATION IN SOLVENT-FREE DONOR-BRIDGE-ACCEPTOR SYSTEMS

BAS WEGEWIJS and JAN W. VERHOEVEN

*Laboratory of Organic Chemistry, University of Amsterdam,  
Nieuwe Achtergracht 129, 1018 WS Amsterdam, The Netherlands*

## CONTENTS

- I. Introduction: Photoinduced Intramolecular Electron Transfer
- II. Experimental: Fluorescence Spectroscopy in Supersonic Jets
- III. General Background: Jet-Cooled Exciplexes
  - A. Kinetics and Energetics of Exciplex Formation
  - B. Intramolecular Exciplexes in Flexibly Linked Systems
- IV. Results: Long-Range Electron Transfer in Jet-Cooled D-Br-A Systems
  - A. Intramolecular Exciplex Formation in Semiflexible Compounds
    - 1. The Harpooning Mechanism: Coulomb-Induced Molecular Folding
    - 2. Influence of the Bridge Moiety: Flexibility and Distance
  - B. Intramolecular Electron Transfer in Rigidly Bridged Compounds
    - 1. Barrierless Charge Separation: Effect of Low-Frequency Vibrations
    - 2. Long-Range Charge-Transfer Excitation: Strong D-A Coupling
- V. Conclusion: Donor-Bridge-Acceptor Compounds in Splendid Isolation
- Acknowledgments
- References

# ELECTRON TRANSFER AND CHARGE SEPARATION IN CLUSTERS

CAROLINE E. H. DESSENT and MARK A. JOHNSON

*Sterling Chemistry Laboratory, Yale University, New Haven,  
CT 06520-8107*

ISRAELA BECKER and ORI CHESHNOVSKY

*School of Chemistry, Beverly and Raymond Sackler Faculty of Exact  
Sciences, Tel Aviv University, 69978 Tel Aviv, Israel*

## CONTENTS

- I. Introduction
- II. Experimental Methods
  - A. Cluster Generation and Mass Separation
  - B. Photoelectron Spectroscopy
  - C. Action Spectroscopy
- III. Ion-Pair Charge Transfer Excitations in Clusters
  - A. 1:1 Halide-Amine Complexes
  - B. Cluster Size Dependence
- IV. Charge-Transfer in Excess Electron Systems
  - A. General Considerations Regarding Electronic Excitations of Anions
  - B. Diffuse States
    - 1. Dipole-Bound Electronically Excited States of Molecular Anions
    - 2. Dipole-Bound, Ground State Molecular Anions
    - 3. Solvated Electrons
  - C. Solvent Supported Electronically Excited Charge-Transfer States of Anionic Clusters
    - 1. The First Solvent Molecule: Photogeneration of Ground State, Dipole-Bound Anions
    - 2. The Second Dipolar Solvent Molecule: Observation of Asymmetric Solvation
    - 3. Charge-Transfer-To-Solvent Precursors in Polar Microscopic Clusters  $I^{\cdot-} \cdot (H_2O)_n$

---

*Advances in Chemical Physics, Volume 106, Electron Transfer—From Isolated Molecules to Biomolecules, Part One*, edited by Joshua Jortner and M. Bixon. Series Editors I. Prigogine and Stuart A. Rice.

ISBN 0-471-25292-1 © 1999 John Wiley & Sons, Inc.

4. Charge-Transfer-To-Solvent Precursors in Polarizable Microscopic Clusters:  
 $\text{I}^{\cdot-}(\text{Xe})_n$
- V. Using Intracuster Charge-Transfer to Probe Reactions at the Half-Collision
  - A. Dissociative Attachment Via Dipole-Bound Excited States
  - B. Charge-Transfer Excited States of the  $\text{S}_{\text{N}}2$  Reaction

# CONTROL OF ELECTRON TRANSFER KINETICS: MODELS FOR MEDIUM REORGANIZATION AND DONOR-ACCEPTOR COUPLING

MARSHALL D. NEWTON

*Department of Chemistry, Brookhaven National Laboratory, Box 5000,  
Upton, New York 11973*

## CONTENTS

- I. Introduction
- II. Theoretical Preliminaries
  - A. Kinetic Context
  - B. Electronic States and Matrix Elements under the Two-State Approximation
  - C. Time Scales and Vibronic Coupling
- III. Solvation and Medium Reorganization
  - A. Free Energy Functionals
    - 1. Nonequilibrium State of the Medium
    - 2. Reorganization Energy and the Primary Reaction Coordinate
    - 3. More Sophisticated Treatment of Medium Reorganization
    - 4. More General Treatment of Medium Coordinates
  - B. Quantum-Mixing of Diabatic States
    - 1. Weak Coupling
    - 2. Strong-Coupling Limit
  - C. Solvent Optical Response
  - D. Detailed Quantum-Chemical Formulation
    - 1. Equilibrium Solvation
    - 2. Nonequilibrium Solvation
    - 3. Cavity Models
- IV. D-A Coupling
  - A. What Particles (and How Many) Are Actually Transferred in "Electron Transfer" Processes?
  - B. The Nature of "Electron Tunneling"

---

*Advances in Chemical Physics, Volume 106, Electron Transfer—From Isolated Molecules to Biomolecules, Part One*, edited by Joshua Jortner and M. Bixon. Series Editors I. Prigogine and Stuart A. Rice.

ISBN 0-471-25292-1 © 1999 John Wiley & Sons, Inc.

C. Influence of Medium on  $T_{if}$

D. Detailed Models for  $T_{if}$

1. Thermal ET
2. Consequences of Degeneracy or Near Degeneracy at D or A Sites
3. Direct Evaluation of  $T_{if}$  using Symmetry-Broken Wavefunctions
4. Optical ET and the Mulliken–Hush Model
5. Generalized Mulliken–Hush Model

V. Computational Applications

A. Solvent Reorganization Energy

1. ET Through Alkane Chains
2. Molecular-Level Models

B. D–A Coupling

1. Orbital Models
2. Coupling ( $T_{if}$ ) through Alkane Chains [ $I\pi(j)$ ]
3. Dependence of  $T_{if}$  on the Nature of Bonding in the Bridge
4. ET Processes in the  $Zn_2(H_2O)^+$  Complex
5. Effective  $r_{DA}$  Values

VI. Conclusion

Acknowledgments

# THEORIES OF STRUCTURE–FUNCTION RELATIONSHIPS FOR BRIDGE-MEDIATED ELECTRON TRANSFER REACTIONS

SPIROS S. SKOURTIS

*Department of Natural Sciences, University of Cyprus,  
P.O. Box 537, 1678 Nicosia, Cyprus*

DAVID N. BERATAN

*Department of Chemistry, University of Pittsburgh, Pittsburgh, PA 15260*

## CONTENTS

- I. Introduction
- II. Green Function Description of Electronic Propagation
  - A. Partitioning and Reduced Hamiltonians/Green Functions
  - B. Nonorthogonal Basis
    - 1. The Inequivalence of Schrödinger Equation and Green Function Equation Partitioning
  - C. Orthogonal Basis
  - D. The Two-State Approximation
    - 1. Partitioning the Many-electron Green Function
- III. One-Dimensional Models and Analytical Solutions
  - A. Perturbative Treatment of Bridge Interactions
  - B. Nonperturbative Treatment of Bridge Interactions
    - 1. Infinite Periodic Bridge with Nearest-Neighbor Interactions
    - 2. Finite Bridge with Nearest-Neighbor Interactions
  - C. Inclusion of Non-Nearest-Neighbor Interactions
    - 1. A Graph-Theoretical Approach
- IV. Periodic Bridges with Multiorbital Repeating Units
- V. Density-Matrix Descriptions of Bridge Mediation
  - A. Density-Matrix Pathways in Liouville Space
  - B. Tunneling Currents

---

*Electron Transfer: From Isolated Molecules to Biomolecules, Part One*, Edited by Joshua Jortner and M. Bixon. Advances in Chemical Physics Series, Volume 106, series editors I. Prigogine and Stuart A. Rice.

ISBN 0-471-25292-1 © 1999 John Wiley & Sons, Inc.

- VI. Path-Integral Formulation of the Superexchange Matrix Element
    - A. Structure–Function Relationships
  - VII. Approaches to Structure–Function Interpretation and Applications
    - A. Through-Bond versus Through-Space Propagation
      - 1. Balancing Through-Bond and Through-Space Propagation: Tunneling Pathways
    - B. The Renormalized Perturbation Expansion
    - C. Fattening Pathways and Pathway Tubes
    - D. Extended-Hückel Analysis of Protein-Mediated Coupling
    - E. Beyond Extended-Hückel Hamiltonians
    - F. Fragments
      - 1. Effective Hamiltonians for Fragment-based ET Computations
    - G. Importance Analysis
    - H. Electron Transfer Contact Maps: Exact Comparison of Different Bridge Structures
  - VIII. Protein Electron Transfer Experiments that Test Theory
    - A. Modified Proteins
    - B. Protein Motif Models and Protein Maquettes
  - IX. Conclusions
- Acknowledgments
- References

# FLUCTUATIONS AND COHERENCE IN LONG-RANGE AND MULTICENTER ELECTRON TRANSFER

GITTE IVERSEN<sup>1</sup>, YURIJ I. KHARKATS<sup>2</sup>,  
ALEKSANDR M. KUZNETSOV<sup>2</sup>, AND JENS ULSTRUP<sup>1</sup>

<sup>1</sup>*Department of Chemistry, Technical University of Denmark, Building 207,  
DK-2800 Lyngby, Denmark*

<sup>2</sup>*The A.N. Frumkin Institute of Electrochemistry, Russian Academy of  
Sciences, Leninskij Prospect 31, 117071 Moscow, Russia*

## CONTENTS

- I. Introduction
- II. Multilevel Electronic Processes in Chemistry and Biology
  - A. Multilevel Physical Electronic Processes
  - B. Long-Range and Superexchange Electron Transfer in Chemical and Biological Systems
  - C. Coherent Multistep Electron Transfer and Dynamically Populated Intermediate States
- III. Electron Transfer Routes and Molecular Group Separation Schemes
  - A. Long-Range Electron Transfer and Splitting of Energy Eigenvalues
  - B. Perturbation Schemes and Long-Range Electron Transfer as a Scattering Process
  - C. Notes on Experimental Investigations of Long-Range Electron Transfer in Homogeneous Solution
- IV. Modulation of the Tunnel Factor and Self-Consistent Electronic-Vibrational Interactions in Long-Range Electron Transfer
  - A. Environmental Wavefunction Modulation in the Condon Approximation
  - B. Self-Consistent Improved Condon and Non-Condon Schemes
- V. Coherent Two-Step Electron Transfer
  - A. A Note on Three-Level Resonance Electron Tunneling
  - B. The Quasiclassical Approximation to Nuclear Dynamics in Three-Level Molecular Electron Transfer
  - C. Intermediate-State Vibrational Relaxation

---

*Advances in Chemical Physics, Volume 106, Electron Transfer—From Isolated Molecules to Biomolecules, Part One*, edited by Joshua Jortner and M. Bixon. Series Editors I. Prigogine and Stuart A. Rice.

ISBN 0-471-25292-1 © 1999 John Wiley & Sons, Inc.

- D. Quantum-Mechanical Density-Matrix Approach to Three-Level Electron Transfer
- E. Some Notes on the Observation of Coherent Multistep Electron Transfer
- VI. Some Observations on Relations between Thermal and Optical Multilevel Electronic Transitions
  - A. First-Order, Two-Level Transitions
  - B. Second-Order Transitions
- VII. Long-Range Electron Transfer in Nontraditional Electrochemical Electron Transfer Systems: Tunnel Charge Lability, *in Situ* STM of Large Adsorbates, and Continuous Phase Transitions in Two-Dimensional Electrochemical Surface Layers
  - A. Overpotential-Induced Electrochemical Lability of the Electronic Tunnel Factor
  - B. *In Situ* STM of Large Adsorbate Molecules
  - C. Continuous Phase Transitions in Interfacial Tunnel Systems
- VIII. Some Outlooks and Concluding Remarks

# LANCZOS ALGORITHM FOR ELECTRON TRANSFER RATES IN SOLVENTS WITH COMPLEX SPECTRAL DENSITIES

AKIRA OKADA, VLADIMIR CHERNYAK,  
AND SHAUL MUKAMEL

*Department of Chemistry, University of Rochester, Rochester, NY 14627*

## CONTENTS

I.	Introduction
II.	Multimode Description of Solvation Dynamics
III.	Green Function Expression for the Rate Matrix
IV.	Lanczos Expansion of the Rate in Dominant Nuclear Modes
V.	Numerical Results
VI.	Discussion
Appendix A:	Derivation of Eq. (4.3)
Appendix B:	Inversion of the Kernel Using the Lanczos Algorithm
Appendix C:	The Frequency-Dependent ET Rate
Appendix D:	Numerical Solution of Eqs. (4.3), (4.8), and (4.21)
Appendix E:	Solution of Eq. (2.9): Density-Matrix Nuclear Wave Packets
Appendix F:	Equilibration of Population Wave Packets
	Acknowledgments
