## Part I The Fokker–Planck Equation

---

<b>1. Dynamical Systems Perturbed by Noise: the Langevin Equation .....</b>	<b>3</b>
1.1 Stochastic Processes and the Effect of Small Noise .....	3
1.2 The Itô Calculus .....	7
1.3 Small Noise Expansion of the Langevin Equation .....	10
1.4 Simulation of the Stochastic Process.....	12
1.5 Exercises .....	13
<b>2. The Fokker–Planck Equation: First Exit from a Domain.....</b>	<b>18</b>
2.1 The Forward and the Backward Equation.....	18
2.2 The Exit Probability and the Expected Exit Time.....	23
2.3 Exercises .....	25
<b>3. The Fokker–Planck Equation: One Dimension.....</b>	<b>27</b>
3.1 Stationary and Quasi-Stationary Distributions .....	28
3.2 Exit Time and Exit Probability .....	32
3.3 Exercises .....	38

---

## Part II Asymptotic Solution of the Exit Problem

---

<b>4. Singular Perturbation Analysis of the Differential Equations for the Exit Probability and Exit Time in One Dimension.....</b>	<b>43</b>
4.1 The Exit Probability .....	43
4.2 The Expected Exit Time .....	50
4.3 Vanishing Diffusion and Drift at a Boundary .....	52
4.4 The Problem of Unlikely Exit Using the WKB-Method.....	57
4.5 Exercises .....	70

<b>5. The Fokker–Planck Equation in Several Dimensions: the Asymptotic Exit Problem .....</b>	<b>73</b>
5.1 Exit by Diffusion Across the Drift .....	74
5.2 Exit by Diffusion Along the Drift .....	78
5.3 Exit by Diffusion Against the Drift.....	80
5.4 Exit from the Domain of Attraction .....	91
5.5 Exercises .....	95

---

## Part III Applications

---

<b>6. Dispersive Groundwater Flow and Pollution .....</b>	<b>99</b>
6.1 The Boundary Layer for a Symmetric Flow Field .....	101
6.2 The Boundary Layer for an Arbitrary Flow Field .....	107
<b>7. Extinction in Systems of Interacting Biological Populations .....</b>	<b>118</b>
7.1 A Prey-Predator System .....	118
7.2 The SIR-Model in Stochastic Epidemiology .....	130
7.3 Extinction of a Population Within a System of Interacting Populations .....	141
<b>8. Stochastic Oscillation .....</b>	<b>149</b>
8.1 Equivalent Statistical Linearization .....	150
8.2 Almost Linear Oscillation and Stochastic Averaging .....	152
8.3 Stochastic Relaxation Oscillation .....	156
<b>9. Confidence Domain, Return Time and Control .....</b>	<b>168</b>
9.1 Confidence Domain .....	168
9.2 Return Time of a Stochastic System and Its Application in Ecology .....	171
9.3 Applications in Control Theory .....	180
<b>10. A Markov Chain Approximation of the Stochastic Dynamical System .....</b>	<b>184</b>
10.1 Preferent States in a Low Order Spectral Model of the Atmospheric Circulation .....	184
10.2 Extinction and Recolonization in Population Biology .....	192

<b>Literature .....</b>	<b>203</b>
<b>Answers to Exercises .....</b>	<b>211</b>
