### I. THEORY AND APPLICATIONS OF COMPLEX RAYS

*by Yu.A. KRAVTSOV (MOSCOW, RUSSIAN FEDERATION),  
G.W. FORBES AND A.A. ASATRYAN (SYDNEY, AUSTRALIA)*

§ 1. INTRODUCTION . . . . .	3
1.1. Pioneering works . . . . .	3
1.2. Character of wavefields described by complex geometrical optics . . . . .	4
1.3. Goals of the review . . . . .	5
§ 2. BASIC EQUATIONS OF GEOMETRICAL OPTICS . . . . .	5
2.1. Eikonal, transfer, and ray equations of traditional geometrical optics . . . . .	5
2.2. Rays as the skeleton for the wavefield . . . . .	8
2.3. Complex form of the geometrical optics method . . . . .	10
2.4. Alternative approach to phenomena described by complex rays . . . . .	12
§ 3. PROPERTIES OF COMPLEX RAYS . . . . .	15
3.1. Ray paths in the complex space . . . . .	15
3.2. Fermat's principle for complex rays . . . . .	16
3.3. Selection rules for complex rays . . . . .	17
3.4. Complex rays and the saddle-point method . . . . .	19
3.5. Complex caustics . . . . .	21
3.6. Space-time complex rays . . . . .	23
3.7. Electromagnetic waves and complex rays . . . . .	24
3.8. Complex rays and uniform asymptotics . . . . .	26
§ 4. COMPLEX RAYS IN PHYSICAL PROBLEMS . . . . .	27
4.1. Complex rays inside a circular caustic . . . . .	27
4.2. Wave reflection in a layered medium . . . . .	29
4.3. Point source in a layered medium . . . . .	31
4.4. The vicinity of a caustic cusp in free space . . . . .	32
4.5. Swallow-tail caustic: an example with four ray contributions . . . . .	33
4.6. Point source in a parabolic layer . . . . .	33
4.7. Above-barrier reflection . . . . .	36
4.8. Complex rays behind a sinusoidal phase screen . . . . .	37
4.9. Surface waves . . . . .	37
4.10. Reflection of inhomogeneous waves from an interface . . . . .	38
4.11. Complex rays in weakly absorbing media . . . . .	39
4.12. Complex geometrical optics in other wave disciplines . . . . .	42
§ 5. GAUSSIAN BEAMS AND COMPLEX RAYS . . . . .	43
5.1. Gaussian beams and complex sources . . . . .	43

5.2.	Another description of Gaussian beams in terms of complex rays . . . . .	44
5.3.	Transformation of Gaussian beams in optical systems . . . . .	47
5.4.	Diffraction of Gaussian beams . . . . .	49
§ 6.	DISTINCTIVE ASPECTS OF COMPLEX GEOMETRICAL OPTICS . . . . .	50
6.1.	Nonlocal properties of complex rays . . . . .	50
6.2.	Boundaries of applicability of complex geometrical optics . . . . .	51
§ 7.	CONCLUSION . . . . .	52
ACKNOWLEDGMENTS . . . . .		53
REFERENCES . . . . .		53

## II. HOMODYNE DETECTION AND QUANTUM-STATE RECONSTRUCTION

*by D.-G. WELSCH (JENA, GERMANY), W. VÖGEL (ROSTOCK,  
GERMANY) AND T. OPATRNÝ (OLOMOUC, CZECH REPUBLIC)*

§ 1.	INTRODUCTION . . . . .	65
§ 2.	PHASE-SENSITIVE MEASUREMENTS OF LIGHT . . . . .	69
2.1.	Optical homodyning . . . . .	69
2.1.1.	Basic scheme . . . . .	70
2.1.2.	Quadrature-component statistics . . . . .	72
2.1.3.	Multimode detection . . . . .	77
2.1.4.	Q function . . . . .	81
2.1.5.	Probability operator measures . . . . .	86
2.1.6.	Positive P function . . . . .	88
2.1.7.	Displaced-photon-number statistics . . . . .	90
2.1.8.	Homodyne correlation measurements . . . . .	92
2.2.	Heterodyne detection . . . . .	93
2.3.	Parametric amplification . . . . .	94
2.4.	Measurement of cavity fields . . . . .	95
§ 3.	QUANTUM-STATE RECONSTRUCTION . . . . .	100
3.1.	Optical homodyne tomography . . . . .	101
3.2.	Density matrix in quadrature-component bases . . . . .	106
3.3.	Density matrix in the Fock basis . . . . .	108
3.3.1.	Sampling of quadrature-components . . . . .	108
3.3.2.	Sampling of the displaced Fock-states on a circle . . . . .	115
3.3.3.	Reconstruction from propensities . . . . .	118
3.4.	Multimode density matrices . . . . .	119
3.5.	Local reconstruction of $P(\alpha; s)$ . . . . .	122
3.6.	Reconstruction from test atoms in cavity QED . . . . .	123
3.6.1.	Quantum state endoscopy and related methods . . . . .	124
3.6.2.	Atomic beam deflection . . . . .	128
3.7.	Alternative proposals . . . . .	131
3.8.	Reconstruction of specific quantities . . . . .	133
3.8.1.	Normally ordered photonic moments . . . . .	134
3.8.2.	Quantities admitting normal-order expansion . . . . .	137

## CONTENTS

ix

3.8.3. Canonical phase statistics . . . . .	139
3.8.4. Hamiltonian and Liouvillian . . . . .	143
3.9. Processing of smeared and incomplete data . . . . .	144
3.9.1. Experimental inaccuracies . . . . .	145
3.9.2. Least-squares method . . . . .	151
3.9.3. Maximum-entropy principle . . . . .	153
3.9.4. Bayesian inference . . . . .	155
§ 4. QUANTUM STATES OF MATTER SYSTEMS . . . . .	157
4.1. Molecular vibrations . . . . .	158
4.1.1. Harmonic regime . . . . .	159
4.1.2. Anharmonic vibrations . . . . .	160
4.2. Trapped-atom motion . . . . .	163
4.2.1. Quadrature measurement . . . . .	163
4.2.2. Measurement of the Jaynes–Cummings dynamics . . . . .	167
4.2.3. Entangled vibronic states . . . . .	171
4.3. Bose–Einstein condensates . . . . .	173
4.4. Atomic matter waves . . . . .	175
4.4.1. Transverse motion . . . . .	175
4.4.2. Longitudinal motion . . . . .	178
4.5. Electron motion . . . . .	179
4.5.1. Electronic Rydberg wave packets . . . . .	180
4.5.2. Cyclotron state of a trapped electron . . . . .	182
4.5.3. Electron beam . . . . .	183
4.6. Spin and angular momentum systems . . . . .	183
4.7. Crystal lattices . . . . .	185
ACKNOWLEDGMENTS . . . . .	187
APPENDIX A. RADIATION FIELD QUANTIZATION . . . . .	187
APPENDIX B. QUANTUM-STATE REPRESENTATIONS . . . . .	189
B.1. Fock states . . . . .	189
B.2. Quadrature-component states . . . . .	190
B.3. Coherent states . . . . .	191
B.4. s-parametrized phase-space functions . . . . .	192
B.5. Quantum state and quadrature components . . . . .	194
APPENDIX C. PHOTODETECTION . . . . .	195
APPENDIX D. ELEMENTS OF LEAST-SQUARES INVERSION . . . . .	197

III. SCATTERING OF LIGHT IN THE EIKONAL APPROXIMATION  
*by S.K. SHARMA (CALCUTTA, INDIA) AND D.J. SOMERFORD (CARDIFF, UK)*

§ 1. INTRODUCTION . . . . .	215
§ 2. THE EIKONAL APPROXIMATION IN NON-RELATIVISTIC POTENTIAL SCATTERING . . . . .	218
2.1. Preliminaries of the problem . . . . .	218
2.2. The eikonal approximation . . . . .	219
2.2.1. Approximation from the Schrödinger equation . . . . .	219

2.2.2. Approximation from the integral equation . . . . .	220
2.2.3. Propagator approximation . . . . .	221
2.2.4. Physical picture of propagation in the EA . . . . .	222
2.3. Scattering amplitude . . . . .	222
2.3.1. Eikonal amplitude . . . . .	222
2.3.2. Glauber variant of the EA . . . . .	223
2.4. Relationship with partial wave expansion . . . . .	224
2.5. Comparison with the Born series . . . . .	225
2.6. Interpretation of the EA as a long range approximation . . . . .	226
2.7. Numerical comparisons and potential dependence of the EA . . . . .	226
2.8. Modified eikonal approximations: corrections to the EA . . . . .	227
2.8.1. The eikonal expansion . . . . .	227
2.8.2. The eikonal–Born series . . . . .	228
2.8.3. The generalized eikonal approximation . . . . .	229
2.9. Relationship with Rytov approximation . . . . .	229
§ 3. EIKONAL APPROXIMATION IN OPTICAL SCATTERING . . . . .	230
3.1. Analogy with potential scattering . . . . .	231
3.2. Validity of scalar scattering approximation . . . . .	232
3.3. Scattering by a homogeneous sphere . . . . .	233
3.3.1. The eikonal approximation . . . . .	233
3.3.2. Derivation of the EA scattering function from the Mie solutions . . . . .	236
3.3.3. Relationship with the anomalous diffraction approximation . . . . .	237
3.3.4. Corrections to the EA . . . . .	238
3.3.5. Numerical comparisons . . . . .	241
3.3.6. One-dimensional models . . . . .	247
3.3.7. Backscattering in the EA . . . . .	249
3.3.8. Vector description . . . . .	251
3.4. Scattering by an infinitely long cylinder . . . . .	253
3.4.1. The scattering function for normal incidence . . . . .	254
3.4.2. Scattering by a homogeneous cylinder . . . . .	255
3.4.3. The EA from exact solutions . . . . .	257
3.4.4. Corrections to the EA . . . . .	258
3.4.5. Numerical comparisons . . . . .	259
3.4.6. The EA as $ m - 1  \rightarrow 0$ approximation . . . . .	260
3.4.7. Vector formalism . . . . .	261
3.4.8. Scattering at oblique incidence . . . . .	263
3.4.9. Scattering by an anisotropic cylinder . . . . .	263
3.5. Scattering by a coated sphere . . . . .	264
3.6. Scattering by a spheroid . . . . .	266
3.7. Scattering of light by neighboring dielectric spheres . . . . .	267
§ 4. APPLICATIONS OF THE EIKONAL APPROXIMATION . . . . .	268
4.1. Particle sizing . . . . .	268
4.1.1. One particle at a time . . . . .	268
4.1.2. Suspension of particles . . . . .	272
4.2. Scattering by rough surfaces . . . . .	273
4.3. Plasma density profiling . . . . .	276

## IV. THE ORBITAL ANGULAR MOMENTUM OF LIGHT

*by L. ALLEN (COLCHESTER/ST. ANDREWS, UK), M.J. PADGETT  
(ST. ANDREWS, UK) AND M. BABIKER (COLCHESTER, UK)*

§ 1. INTRODUCTION . . . . .	294
§ 2. THE PARAXIAL APPROXIMATION . . . . .	296
§ 3. NONPARAXIAL LIGHT BEAMS . . . . .	302
§ 4. EIGENOPERATOR DESCRIPTION OF LASER BEAMS . . . . .	306
§ 5. GENERATION OF LAGUERRE-GAUSSIAN MODES . . . . .	309
§ 6. OTHER GAUSSIAN LIGHT BEAMS POSSESSING ORBITAL ANGULAR MOMENTUM . . . . .	319
§ 7. SECOND-HARMONIC GENERATION AND ORBITAL ANGULAR MOMENTUM . . . . .	322
§ 8. MECHANICAL EQUIVALENCE OF SPIN AND ORBITAL ANGULAR MOMENTUM: OPTICAL SPANNERS . . . . .	324
§ 9. ROTATIONAL FREQUENCY SHIFT . . . . .	326
§ 10. ATOMS AND THE ORBITAL ANGULAR MOMENTUM OF LIGHT . . . . .	328
§ 11. ATOMS AND MULTIPLE LAGUERRE-GAUSSIAN BEAM CONFIGURATIONS . . . . .	342
§ 12. MOTION OF Mg <sup>+</sup> IN MULTIPLE BEAM CONFIGURATIONS . . . . .	345
§ 13. ATOMS AND CIRCULARLY POLARIZED LIGHT . . . . .	356
§ 14. SPIN-ORBIT COUPLING OF LIGHT . . . . .	363
§ 15. CONCLUSIONS . . . . .	366
ACKNOWLEDGEMENTS . . . . .	369
REFERENCES . . . . .	369

## V. THE OPTICAL KERR EFFECT AND QUANTUM OPTICS IN FIBERS

*by A. SIZMANN AND G. LEUCHS (ERLANGEN, GERMANY)*

§ 1. INTRODUCTION . . . . .	375
§ 2. HISTORICAL PERSPECTIVE . . . . .	377
§ 3. THE OPTICAL KERR EFFECT . . . . .	380
§ 4. QUANTUM OPTICS IN FIBERS – PRACTICAL CONSIDERATIONS . . . . .	388
4.1. Kerr-nonlinearity and power confinement . . . . .	388
4.2. Optical solitons in fibers . . . . .	389
4.3. Guided acoustic-wave Brillouin scattering (GAWBS) . . . . .	393
§ 5. QUADRATURE SQUEEZING . . . . .	397
5.1. Properties of Kerr quadrature squeezed states . . . . .	397
5.1.1. Single-mode interaction Hamiltonian . . . . .	397
5.1.2. Single-mode linearized approach . . . . .	400

5.1.3. Power enhancement with ultrashort pulses . . . . .	404
5.2. Experiments with continuous-wave laser light . . . . .	406
5.3. Experiments with ultrashort pulses . . . . .	408
5.3.1. Ultrashort pulses for GAWBS noise suppression . . . . .	408
5.3.2. Generation and detection of pulsed quadrature squeezing using a balanced Sagnac loop . . . . .	409
5.3.3. Generation and detection of pulsed quadrature squeezing using a linear configuration . . . . .	411
5.3.4. Experiments with solitons . . . . .	412
5.3.5. Experiments with non-solitonic ultrashort pulses ( $k'' \approx 0$ ) . . . . .	415
§ 6. QUANTUM NONDEMOLITION MEASUREMENTS . . . . .	418
6.1. Concept and realization of a QND measurement of the photon number . . . . .	418
6.1.1. Cross-phase modulation as a QND interaction . . . . .	418
6.1.2. Semiclassical approach . . . . .	421
6.1.3. Self-phase modulation noise in the QND measurement . . . . .	423
6.2. Experiments with continuous-wave laser light . . . . .	428
6.3. Experiments with solitons . . . . .	431
6.3.1. Pulse preparation . . . . .	432
6.3.2. Elimination of GAWBS noise in the QND detection . . . . .	433
6.3.3. Quantum noise of the probe . . . . .	434
6.3.4. Recent proposals . . . . .	434
§ 7. PHOTON-NUMBER SQUEEZING . . . . .	435
7.1. Spectral filtering . . . . .	435
7.1.1. Amplification and deamplification of quantum noise . . . . .	436
7.1.2. Experimental apparatus and results: an overview . . . . .	440
7.2. Spectral filtering of picosecond pulses . . . . .	442
7.3. Spectral filtering of sub-picosecond pulses . . . . .	443
7.3.1. Noise reduction and enhancement as a function of filter type and cut-off wavelength . . . . .	444
7.3.2. Noise reduction as a function of fiber length . . . . .	446
7.3.3. Intrapulse spectral correlations . . . . .	448
7.3.4. Spectral filtering of pulses in the normal group-velocity dispersion regime . . . . .	449
7.4. Asymmetric fiber Sagnac interferometer . . . . .	449
7.4.1. Single-mode analysis of a Kerr-nonlinear interferometer . . . . .	451
7.4.2. Considerations for pulsed squeezing . . . . .	452
7.4.3. Pulsed photon-number squeezing from an asymmetric Sagnac loop . . . . .	453
§ 8. FUTURE PROSPECTS . . . . .	458
ACKNOWLEDGEMENTS . . . . .	460
