Physics of Crystal-to-Glass Transformations

PAUL R. OKAMOTO, NGHI Q. LAM, AND LYNN E. REHN

I. Introduction	2
II. The Liquid-to-Glass Transition	5
III. Lattice Instability Models of the Crystal-to-Glass Transformation	15
IV. The Generalized Lindemann Melting Criterion	31
V. Applications of the Lindemann Model to Solid-State Amorphization	65
VI. Summary and Future Work	133

Local Electronic Structure of Defects in Superconductors

MICHAEL E. FLATTÉ AND JEFF M. BYERS

I. Introduction	138
II. Bulk Properties of Defects in Superconductors	144
III. Techniques for Calculating the Local Properties of Defects in Superconductors	152
IV. Analytic Solution of the Point Potential	171
V. Impurities in Superconductors with Isotropic Order Parameters	184
VI. Impurities in Superconductors with Anisotropic Order Parameters	212
VII. Brief Discussion of Recent Results for Dynamical Spins	224
VIII. Summary	226

A Perspective on the Metal-Nonmetal Transition

PETER P. EDWARDS, ROY L. JOHNSTON, FRIEDRICH HENSEL,

C. N. R. RAO, AND DAVID P. TUNSTALL

I. From the Metallic to the Nonmetallic State of Matter	229
II. How Can We Visualize the Metal-Nonmetal Transition?	235
III. Diverse Systems Exhibiting Metal-Nonmetal Transitions	254
IV. Concluding Remarks	336
