CONTRIBUTORS xxiii
ACRONYMS, ABBREVIATIONS, AND SYMBOLS xxv
FOREWORD xxxiii
PREFACE xxxv

I **Nuclear Radiation, Its Interaction with Matter and Radioisotope Decay**

MICHAEL F. L'ANNUNZIATA

I. Introduction 2

II. Particulate Radiation 3

 A. *Alpha Particles* 3

 B. *Negatrons* 9

 C. *Positrons* 12

 1. Positron Emission versus Electron Capture 14

 D. *Internal Conversion Electrons* 15

 E. *Auger Electrons* 17

 F. *Neutron Radiation* 18

 1. Neutron Classification 18

 2. Sources of Neutrons 20

 a. Alpha Particle-Induced Nuclear Reactions 20

 b. Spontaneous Fission 21

 c. Neutron-Induced Fission 21

 d. Photoneutron (γ, n) Sources 23

 e. Accelerator Sources 24

 f. Nuclear Fusion 24

3.	Interactions of Neutrons with Matter	25
a.	Elastic Scattering	25
b.	Inelastic Scattering	27
c.	Neutron Capture	28
d.	Nonelastic Reactions	29
e.	Nuclear Fission	30
4.	Neutron Attenuation and Cross Sections	30
5.	Neutron Decay	35
III.	Electromagnetic Radiation	36
A.	<i>Gamma Radiation</i>	36
B.	<i>Annihilation Radiation</i>	39
C.	<i>Cherenkov Radiation</i>	41
D.	<i>X-Radiation</i>	41
E.	<i>Bremsstrahlung</i>	43
IV.	Interaction of High-Energy Electromagnetic Radiation with Matter	45
A.	<i>Photoelectric Effect</i>	45
B.	<i>Compton Effect</i>	46
C.	<i>Pair Production</i>	48
D.	<i>Combined Photon Interactions</i>	50
V.	Radioisotope Decay	53
A.	<i>Half-Life</i>	54
B.	<i>General Decay Equations</i>	60
C.	<i>Secular Equilibrium</i>	61
D.	<i>Transient Equilibrium</i>	64
E.	<i>No Equilibrium</i>	67
F.	<i>More Complex Decay Schemes</i>	68
VI.	Radioactivity Units and Radionuclide Mass	70
A.	<i>Units of Radioactivity</i>	70
B.	<i>Correlation of Radioactivity and Radionuclide Mass</i>	71
C.	<i>Carrier-Free Radionuclides</i>	72
	References	73

2 Gas Ionization Detectors

KARL BUCHTELA

I.	Introduction: Principles of Radiation Detection by Gas Ionization	75
II.	Characterization of Gas Ionization Detectors	77
A.	<i>Ion Chambers</i>	77
B.	<i>Proportional Counters</i>	78
C.	<i>Geiger–Mueller Counters</i>	78
III.	Definition of Operating Characteristics of Gas Ionization Detectors	79
A.	<i>Counting Efficiency</i>	79

B. <i>Energy Resolution</i>	79
C. <i>Resolving Time</i>	80
IV. Ion Chambers	80
A. <i>Operating Modes of Ion Chambers</i>	81
1. Ion Chambers Operating in the Current Mode	81
2. Charge Integration Ionization Chambers	81
3. Pulse Mode Ion Chambers	81
B. <i>Examples and Applications of Ion Chambers</i>	82
1. Calibration of Radioactive Sources	82
2. Measurement of Gases	82
3. Frisch-Grid Ion Chambers	83
4. Charged Particle Spectroscopy with Ion Chambers	84
5. Electret Detectors	84
6. Fission Chambers	84
V. Proportional Gas Ionization Detectors	85
A. <i>Examples and Applications of Proportional Counters</i>	87
1. Gross Alpha–Beta Counting, Alpha–Beta Discrimination, and Radiation Spectroscopy	87
2. Position Sensitive Proportional Counters	87
a. Single-Wire Proportional Counters	87
b. Multiwire Proportional Counters	88
c. Microstrip Ionization Counters	89
d. Multicounting Techniques in Radiocarbon Dating	92
3. Environmental Radioassay	93
a. Radon in Water	93
b. Measurement of Plutonium-241	94
c. Measurement of Iron-55	94
d. Tritium in Air	95
VI. Geiger–Mueller Counters	96
A. <i>Designs and Properties of Geiger–Mueller Counters</i>	98
1. Fill Gas	98
2. Quenching	98
3. Plateau	99
4. Applications	99
a. Environmental Radioassay	99
VII. Special Types of Ionization Detectors	100
A. <i>Neutron Detectors</i>	100
1. BF ₃ Tube Construction	101
2. Detectors for Fast Neutrons	102
a. Long Counter	103
3. Delayed Neutron Activation Analysis	104
B. <i>Multiple Sample Reading Systems</i>	105
C. <i>Self-Powered Detectors</i>	106
D. <i>Self-Quenched Streamer</i>	107
E. <i>Long-Range Alpha Detectors</i>	108
F. <i>Liquid Ionization and Proportional Detectors</i>	110
References	110

3 Semiconductor Detectors

PAUL F. FETTWEIS AND HAROLD SCHWENN

- I. Introduction 115
 - A. *The Gas-Filled Ionization Chamber* 115
 - B. *The Semiconductor Detector* 116
 - C. *Fundamental Differences between Ge and Si Detectors* 119
 - 1. The Energy Gap 120
 - 2. The Atomic Number 120
 - 3. The Purity or Resistivity of the Semiconductor Material 122
 - 4. Charge Carrier Life Time τ 122
- II. Ge Detectors 123
 - A. *Ge(Li) and High-Purity Ge Detectors* 123
 - B. *Analysis of Typical γ -Spectra* 123
 - 1. Spectrum of a Source Emitting a Single γ -Ray with $E_\gamma < 1022$ keV 123
 - 2. Spectrum of a Multiple γ -Ray Source Emitting at Least One γ -Ray with an Energy ≥ 1022 keV 127
 - 3. Peak Summation 129
 - 4. Ge-Escape Peaks 130
 - C. *Standard Characteristics of Ge Detectors* 130
 - 1. Energy Resolution 130
 - a. The Electronic Noise Contribution $(FWHM)_{\text{elect}}$ and Its Time Behavior 131
 - b. Other Sources of Peak Degradation 134
 - c. The Gaussian Peak Shape 135
 - 2. The Peak-to-Compton Ratio 136
 - 3. The Detector Efficiency 136
 - a. Geometrical Efficiency Factor 136
 - b. The Intrinsic Efficiency ϵ_i and the Transmission T_γ 136
 - c. Relative Efficiency 138
 - d. The Experimental Efficiency Curve 139
 - D. *Background and Background Reduction* 141
 - 1. The Background in Presence of a Source 141
 - 2. The Background in Absence of the Source 141
 - a. Man-Made Isotopes 141
 - b. Natural Isotopes 141
 - 3. Background of Cosmic Origin 153
 - a. "Prompt," Continuously Distributed Background 153
 - b. Neutron-Induced "Prompt" Discrete γ Rays 153
 - c. "Delayed" γ Ray 153
 - 4. Background Reduction 154
 - a. Passive Background Reduction 154
 - b. Active Background Reduction 155
 - E. *The Choice of a Detector* 157
 - 1. General Criteria 157
 - 2. The Well-Type Detector 157

III. Si Detectors	158
A. <i>Si(Li) X-Ray Detectors</i>	158
B. <i>Si Charged Particle Detectors</i>	158
1. Alpha Detectors	160
a. Factors Influencing Resolution and Efficiency	161
b. Factors Influencing Contamination and Stability	164
c. Stability of the Detection System	164
d. The Minimum Detectable Activity (MDA)	165
2. Electron Spectroscopy and β -Counting	165
3. Continuous Air Monitoring	167
a. Light Tightness and Resistance to Harmful Environments	167
b. Efficiency	170
c. Background and MDA Problems in Continuous Air Monitoring	170
IV. Spectroscopic Analysis with Semiconductor Detectors	171
A. <i>Sample Preparation</i>	172
1. Sample Preparation for Alpha Spectrometry	173
a. Sample Mounting	174
b. Chemical Separation	181
c. Preliminary Treatments	183
2. Sample Preparation for Gamma Spectrometry	186
B. <i>Analysis—Analytical Considerations</i>	188
1. Analytical Considerations in Alpha Spectrometry	188
2. Analytical Considerations in Gamma Spectrometry	190
a. Peak Location	193
b. Peak Area Analysis	195
c. Peak Area Corrections	199
d. Efficiency Calculation	201
e. Nuclide Identification and Activity Calculation	202
References	205

4 Radiotracer Liquid Scintillation Analysis

MICHAEL F. L'ANNUNZIATA AND MICHAEL J. KESSLER

I. Introduction	210
II. Basic Theory	211
A. <i>Basic Scintillation Process</i>	211
B. <i>Alpha-, Beta-, and Gamma-Ray Interactions in Liquid Scintillation Counting</i>	213
C. <i>Cherenkov Photon Counting</i>	216
III. Liquid Scintillation Counter or Analyzer (LSC or LSA)	216
IV. Quench in Liquid Scintillation Counting	221
V. Methods of Quench Correction in Liquid Scintillation Counting	225
A. <i>Internal Standard Method</i>	226

B.	<i>Sample Spectrum Characterization Methods</i>	227
C.	<i>Preparation of Quench Correction Curves</i>	227
D.	<i>External Standard Method</i>	231
E.	<i>Direct DPM Methods</i>	234
1.	Conventional Integral Counting Method (CICM)	234
2.	Modified Integral Counting Method (MICM)	235
3.	Efficiency Tracing with ^{14}C (ET)	236
4.	Digital Overlay Technique (DOT)	240
5.	Multivariate Calibration	241
6.	Other Direct DPM Methods	242
VI.	Common Interferences in Liquid Scintillation Counting	242
A.	<i>Background</i>	242
B.	<i>Quench</i>	243
C.	<i>Radionuclide Mixtures</i>	243
D.	<i>Luminescence</i>	244
1.	Bioluminescence	244
2.	Photoluminescence and Chemiluminescence	245
3.	Luminescence Control, Compensation, and Elimination	247
a.	Chemical Methods	247
b.	Temperature Control	247
c.	Counting Region Settings	248
d.	Delayed Coincidence Counting	248
E.	<i>Static</i>	249
F.	<i>Wall Effect</i>	250
VII.	Multiple Radionuclide Analysis	250
A.	<i>Conventional Dual- and Triple-Radionuclide Analysis</i>	251
1.	Exclusion Method	251
2.	Inclusion Method	252
B.	<i>Digital Overlay Technique (DOT)</i>	258
C.	<i>Full Spectrum DPM (FS-DPM)</i>	259
D.	<i>Recommendations for Multiple-Radionuclide Analysis</i>	261
E.	<i>Statistical and Interpolation Methods</i>	262
1.	Most-Probable-Value Theory	263
2.	Spectral Deconvolution and Interpolation	266
a.	Spectral Fitting	266
b.	Spectrum Unfolding	267
c.	Spectral Interpolation	268
3.	Multivariate Calibration	273
VIII.	Radionuclide Standardization	274
A.	<i>CIEMAT/NIST Efficiency Tracing with ^3H</i>	274
1.	Theory and Principles	274
2.	Procedure	276
3.	Potential Universal Application	280
B.	<i>4π β-γ Coincidence Counting</i>	282
C.	<i>Triple-to-Double Coincidence Ratio (TDCR) Efficiency Calculation Technique</i>	284
1.	Principles	284
2.	Experimental Conditions	286

IX. Microplate Scintillation and Luminescence Counting	288
A. <i>Detector Design</i>	288
B. <i>Optical Crosstalk</i>	288
C. <i>Background Reduction</i>	290
D. <i>Applications</i>	292
1. Liquid Scintillation Analysis	292
2. Solid Scintillator Microplate Counting	293
3. Scintillation Proximity Assay	293
4. Luminescence Assays	293
5. Receptor Binding and Cell Proliferation Assays	294
6. In-Plate Binding Reactions	294
E. <i>DPM Methods</i>	294
F. <i>Advantages and Disadvantages</i>	297
X. PERALS Spectrometry	298
XI. Simultaneous α/β Analysis	300
A. <i>Establishing the Optimum PDD Setting</i>	301
B. <i>Optimizing α/β Discrimination in PDA</i>	303
C. <i>Quenching Effects in α/β Discrimination</i>	304
XII. Radionuclide Identification	305
XIII. Air Luminescence Counting	308
XIV. Liquid Scintillation Counter Performance	311
A. <i>Instrument Normalization and Calibration</i>	312
B. <i>Assessing LSA Performance</i>	312
C. <i>Optimizing LSA Performance</i>	314
1. Counting Region Optimization	314
2. Vial Size and Type	316
3. Cocktail Choice	317
4. Counting Time	317
5. Background Reduction	318
a. Temperature Control	318
b. Underground Counting Laboratory	318
c. Shielding	319
d. Pulse Discrimination Electronics	319
6. Conclusions	321
References	321

5 Environmental Liquid Scintillation Analysis

GORDON T. COOK, CHARLES J. PASSO, JR., AND BRIAN D. CARTER

I. Introduction	332
II. Low-Level Liquid Scintillation Counting Theory	333
A. <i>Sources of Background</i>	333
B. <i>Background Reduction Methods—Instrument Considerations</i>	333
1. Enhanced Passive and Graded Shielding	334
2. Active Guard Detectors	335

3. Pulse Discrimination Electronics	335
a. Pulse Shape Analysis (PSA)	335
b. Pulse Amplitude Comparison (PAC)	336
c. Time-Resolved Liquid Scintillation Counting (TR-LSC)	337
4. TR-LSC Quasi-active Detector Guards	339
a. Slow Scintillating Plastic	339
b. Bismuth Germanate (BGO)	340
5. Counting Region Optimization	340
a. Region Optimization Procedures and Requirements under Constant Quench Conditions	341
b. Region Optimization under Variable Quench Conditions	341
6. Process Optimization	342
C. <i>Background Reduction Methods—Vial, Vial Holder, and Cocktail Considerations</i>	343
1. Vials	343
2. Vial Holders	343
3. Cocktail Choice and Optimization	345
D. <i>Background Reduction Methods—Environment</i>	346
III. Alpha/Beta Discrimination	347
A. <i>Alpha/Beta Separation Theory</i>	347
B. <i>Alpha/Beta Instrumentation</i>	349
1. The PERALS Spectrometer	349
2. Conventional LS Spectrometers with Pulse Shape Discrimination	350
a. EG&G/Wallac	351
b. Packard Instrument Co.	351
c. Beckman Instrument Inc.	351
C. <i>Cocktail and Vial Considerations</i>	353
1. Cocktail Choice	353
a. Aqueous-Accepting Cocktails	353
b. Extractive Scintillators	353
1. Vial Choice	354
D. <i>Alpha/Beta Calibration</i>	354
1. Misclassification Calculations	356
2. Quenching and Quench Correction of Percentage Misclassification	357
IV. Analysis of Beta-Emitting Radionuclides	358
A. <i>Tritium (^3H)</i>	358
1. Environmental Occurrence	358
2. Sample Preparation and Analysis	359
a. Sample Handling	359
b. Sample Preparation	359
c. Sample Purification/Extraction Techniques	360
d. Reference Background Water	362
e. Standards	362
f. Quality Control	363
g. Quality Assurance	363
B. <i>Radiocarbon (^{14}C)</i>	364
1. Environmental Occurrence	364

2. Sample Preparation and Analysis	364
a. CO ₂ Absorption	365
b. Benzene Synthesis	365
C. <i>Nickel-63</i> (⁶³ Ni)	366
1. Environmental Occurrence	366
2. Sample Preparation and Analysis	366
D. <i>Strontium-89 and Strontium-90/Yttrium-90</i> (⁸⁹ Sr and ⁹⁰ Sr/ ⁹⁰ Y)	367
1. Environmental Occurrence	367
2. Sample Preparation and Analysis	368
a. Early LSC Methods	368
b. Recent LSA Methods	368
c. Cherenkov Counting Methods	369
E. <i>Technetium-99</i> (⁹⁹ Tc)	370
1. Environmental Occurrence	370
2. Sample Preparation and Analysis	370
F. <i>Plutonium-241</i> (²⁴¹ Pu)	371
1. Environmental Occurrence	371
2. Sample Preparation and Analysis	371
V. Analysis of Alpha-Emitting Radionuclides Using Conventional LS Spectrometers with Pulse Shape Discrimination	373
A. <i>Gross Alpha Measurements</i>	374
B. <i>Radium-226</i> (²²⁶ Ra)	374
1. Environmental Occurrence	374
2. Sample Preparation and Analysis	374
C. <i>Radon-222</i> (²²² Rn)	375
1. Environmental Occurrence	375
2. Sample Preparation and Analysis	375
a. ²²² Rn Measurements in Air	375
b. ²²² Rn Measurements in Water	376
D. <i>Uranium</i>	377
1. Environmental Occurrence	377
2. Sample Preparation and Analysis	377
E. <i>Transuranium Elements (Np, Pu, Am, Cm)</i>	378
1. Environmental Occurrence	378
2. Sample Preparation and Analysis	378
References	379

6 Statistical Computations in Counting

MICHAEL J. KESSLER

I. Introduction	387
II. Statistics of Nuclear Counting	387
A. <i>Calculation of Counting Statistics</i>	389
B. <i>Count Rate Statistics</i>	390
C. <i>Determination of Counting Time to Achieve a Certain %2s</i>	391
D. <i>Statistics of Net Count Rate</i>	394
1. Low-Level Single-Radionuclide Measurements	394

- 2. Optimization of Net Count Rate Statistics 396
- 3. Dual Radionuclide Count Rate (CPM) Measurements 397
 - a. %2s Calculations 398
 - b. Calculations of DPM Error 401
- E. *Instrument Performance Assessment* 404
 - 1. Figure of Merit (E^2/B) 404
 - 2. Chi-Square Test 405
- References 406

7 Sample Preparation Techniques for Liquid Scintillation Analysis

JAMES THOMSON

- I. Introduction 407
- II. LSC Cocktail Components 408
 - A. *Solvents* 409
 - B. *Scintillators* 410
 - C. *Surfactants* 411
 - 1. Nonionics 412
 - 2. Anionics 412
 - 3. Cationics 413
 - 4. Amphoterics 414
 - D. *Cocktails* 414
- III. Dissolution 414
 - A. *Anions* 415
 - B. *Low-Ionic-Strength Buffers* 415
 - C. *Medium-Ionic-Strength Buffers* 418
 - D. *High-Ionic-Strength Buffers* 419
 - E. *Acids* 419
 - F. *Alkalis* 420
 - G. *Other Types* 420
 - Appendix: Selection and Suitability of a Cocktail Based on Ionic Strength* 421
- IV. Solubilization 424
 - A. *Systems* 424
 - B. *Sample Preparation Methods* 425
 - 1. Whole Tissue 425
 - 2. Liver 426
 - 3. Kidney, Heart, Sinew, Brain, and Stomach Tissue 426
 - 4. Feces 427
 - 5. Blood 428
 - 6. Plant Material 429
 - 7. Electrophoresis Gels 431
 - a. Elution 431
 - b. Dissolution 432
- V. Combustion 434

VI. Carbon Dioxide Trapping and Counting	435
A. <i>Sodium Hydroxide</i>	435
B. <i>Hyamine Hydroxide</i>	436
C. <i>Ethanolamine</i>	436
D. <i>Carbo-Sorb E</i>	437
VII. Biological Samples	437
A. <i>Urine</i>	437
B. <i>Plasma and Serum</i>	439
C. <i>Homogenates</i>	439
D. <i>Solubilization</i>	439
E. <i>Combustion</i>	440
VIII. Filter and Membrane Counting	440
A. <i>Elution Situations</i>	440
B. <i>Sample Collection on Filters</i>	441
C. <i>Filter and Membrane Types</i>	442
D. <i>Sample Preparation Methods</i>	442
1. <i>No Elution</i>	442
2. <i>Partial Elution</i>	443
3. <i>Complete Elution</i>	443
IX. Sample Stability Troubleshooting	444
A. <i>Decreasing Count Rate</i>	444
B. <i>Increasing Count Rate</i>	446
C. <i>Reduced Counting Efficiency</i>	446
X. Swipe Assays	447
A. <i>Wipe Media and Cocktails</i>	447
B. <i>Regulatory Considerations</i>	448
C. <i>Practical Considerations</i>	448
D. <i>General Procedure for Wipe Testing</i>	449
References	450

8 Cherenkov Counting

MICHAEL F. L'ANNUNZIATA

I. Introduction	453
II. Theory	455
III. Quenching and Quench Correction	457
A. <i>Internal Standardization</i>	457
B. <i>Sample Channels Ratio</i>	457
C. <i>Sample Spectrum Quench Indicating Parameters</i>	460
1. <i>Counting Region</i>	460
2. <i>Quench Correction</i>	461
D. <i>External Standard Quench Correction</i>	463
IV. Counting Parameters	464
A. <i>Sample Volume</i>	464
B. <i>Counting Vials</i>	466
C. <i>Wavelength Shifters</i>	469

D. <i>Refractive Index</i>	472
E. <i>Sample Physical State</i>	473
V. <i>Cherenkov Counting in Microplate Format</i>	473
A. <i>Sample-to-Sample Crosstalk</i>	474
B. <i>Sample Volume Effects</i>	475
C. <i>Quench Correction</i>	476
VI. <i>Multiple Radionuclide Analysis</i>	479
A. <i>Sequential Cherenkov and LSA Analysis</i>	479
B. <i>Cherenkov Analysis with Wavelength Shifters</i>	482
VII. <i>Radionuclide Standardization</i>	484
VIII. <i>Applications</i>	488
A. <i>Phosphorus-32</i>	488
B. <i>Combined Strontium-89 and Strontium-90 (Yttrium-90)</i>	490
1. <i>Exclusive Cherenkov Radiation Counting</i>	491
2. <i>Sequential Cherenkov Radiation and Liquid Scintillation Analysis</i>	493
a. <i>Sequential Analysis without Wavelength Shifter</i>	494
b. <i>Sequential Analysis with Wavelength Shifter</i>	496
C. <i>Strontium-90 (Yttrium-90) Exclusive of Strontium-89</i>	497
D. <i>Yttrium-90</i>	498
E. <i>Other Applications</i>	499
IX. <i>Advantages and Disadvantages</i>	500
X. <i>Recommendations</i>	500

10 Flow Scintillation Analysis

MICHAEL F. L'ANNUNZIATA

I. Introduction	601
II. Basics of Flow Scintillation Analysis Instrumentation	603
A. <i>HPLC and Scintillation Analyzer</i>	603
B. <i>Liquid (Homogeneous) Flow Cells</i>	608
C. <i>Solid (Heterogeneous) Flow Cells</i>	609
D. <i>Gamma and PET Flow Cells</i>	611
1. High-Energy Gamma Cell	611
2. Low-Energy Gamma Cell	612
3. PET Cell	612
E. <i>Criteria for Flow Cell Selection</i>	613
III. Principles of Flow Scintillation Counting	618
A. <i>Count Rates</i>	618
B. <i>Background and Net Count Rate</i>	620
C. <i>Counting Efficiency and Disintegration Rates</i>	621
1. Static Efficiency Runs	621
a. Independent of the HPLC System	622
b. Dependent on the HPLC System	623
2. Gradient Efficiency Run	623
D. <i>Minimum Detectable Activity</i>	624
E. <i>Sensitivity, Flow Rate, and Resolution</i>	624
F. <i>Precision</i>	625
G. <i>Detection Optimization</i>	627
1. Multichannel Analysis	627
2. Chemiluminescence Detection and Correction	628
3. Time-Resolved Liquid Scintillation Counting (TR-LSC)	628
H. <i>Instrument Performance Assessment (IPA)</i>	630
IV. Flow Scintillator Selection	630
V. Applications	634
A. <i>Single-Radionuclide Analysis</i>	634
B. <i>Dual-Radionuclide Analysis</i>	635
C. <i>Environmental Monitoring</i>	636
1. Alpha/Beta Discrimination	636

2. Tritium Effluent Water Monitors	637
3. Radiostrontium Measurements	639

II Radionuclide Imaging

LORAIN V. UPHAM AND DAVID F. ENGLERT

I. Introduction	647
II. Film Autoradiography	648
A. <i>Micro/Macro Autoradiography</i>	648
B. <i>Performance of Film Autoradiography Methods</i>	649
1. Sensitivity	649
2. Resolution	650
3. Linear Dynamic Range	651
C. <i>Quantification Methods</i>	652
1. Techniques for Optimization	653
a. Intensifying Screens	653
b. Fluorography	653
2. Advantages of Film Autoradiography	654
3. Disadvantages of Film Autoradiography	654
III. Storage Phosphor Screen Imaging	655
A. <i>Storage Phosphor Technology</i>	655
1. Phosphor Screen Chemistry	656
2. Scanning Mechanisms and Light Collection Optics	656
B. <i>Comparison of Storage Phosphor Systems</i>	657
1. Sensitivity	658
2. Resolution	660
3. Linear Dynamic Range	661
C. <i>Quantification Methods</i>	662
1. Techniques for Optimization	663
2. Advantages of Storage Phosphor Screen Imaging	666
3. Disadvantages of Storage Phosphor Screen Imaging	667
D. <i>Applications of Storage Phosphor Screen Imaging</i>	668
1. Whole-Body Autoradiography	668
2. Receptor Autoradiography	669
3. High-Resolution Protein Gels	669
IV. Electronic Autoradiography	672
A. <i>Technology</i>	672
1. The MICAD Detector	673
2. Digital Signal Processing	674
B. <i>Performance of Electronic Autoradiography</i>	674
1. Sensitivity of Electronic Autoradiography	675
2. Linear Dynamic Range	676
3. Resolution	677
C. <i>Quantification Methods</i>	677
1. Techniques for Optimization	677

- a. Calibration 677
 - b. Sample Presentation 677
- 2. Advantages of Electronic Autoradiography 678
- 3. Disadvantages of Electronic Autoradiography 680
- D. *Applications of Electronic Autoradiography* 680
 - 1. Metabolism Studies 680
 - 2. Postlabeling DNA Adduct Assays 682
 - 3. Gel Mobility Shift Assays 684
 - 4. Northern Blot Analysis 685
 - 5. Southern Blot Analysis 687

I2 Robotics and Automation in Radiochemical Analysis

TONY J. BEUGELSDIJK AND ROBERT M. HOLLEN

- I. Introduction 693
- II. Materials Compatibility and Operational Considerations for Robot and Workcell Construction 694
 - A. *General Irradiation Effects in Crystalline and Noncrystalline Materials with a View to Their Use in Robot Construction* 694
 - B. *Metal Components* 695
 - 1. Electrical Resistivity 695
 - 2. Mechanical Properties 695
 - 3. Chemical Properties 696
 - C. *Effects of Radiation on Organic (Polymeric) Materials* 696
 - 1. General Considerations 696
 - 2. Effect of Dose Rate on Polymers 697
 - 3. Radiation Effects on Specific Polymeric Components 697
 - a. Coatings 697
 - b. Electrical Insulators 698
 - c. Elastomers 698
 - d. Plastics and Resins 699
 - e. Laminates 699
 - f. O-Rings and Seals 699
 - D. *Operational Considerations* 700
 - 1. Electronics Requirements 700
 - 2. Failsafe Modes 700
 - 3. Maintainability 700
- III. Applications of Robotic Systems to Radiochemical Analysis 701
 - A. *Robot-Assisted Sample Preparation for Plutonium and Americium Radiochemical Analysis* 701
 - 1. Robotic System 702
 - 2. Software Features 703
 - 3. Productivity Considerations 704
 - 4. Results 704

- B. *Dissolution of Plutonium* 705
 - 1. Task Description 705
 - 2. Robotic Hardware and Custom Components 706
- C. *Nevada Test Site Solution-Dispensing Robotic System* 708
 - 1. Introduction 708
 - 2. Hardware Description 708
 - 3. Results 709
- IV. Systems Integration: Building the Fully Automated Method 709
 - A. *Introduction* 709
 - 1. Basic Components 709
 - 2. System Integration 710
 - 3. Hardware and Software Standards 710
 - 4. Plug-and-Play Concept 710
 - 5. The Standard Laboratory Module (SLM) 711
 - 6. Additional Components 711
 - 7. Standard Analysis Methods (SAMs) 712
 - B. *The Path to Full Automation* 712
 - 1. Near-Term Concerns 712
 - 2. The Mini-SAM 713
 - C. *Attributes of SLMs and the Integrated System* 713
 - 1. Layout 713
 - 2. Sample Transfer 714
 - 3. Capping 714
 - 4. Material Flow 715
 - 5. SLM Ports 715
 - 6. Queues and Queuing Interchanges 715
 - 7. Embedded SLM Controllers 715
 - 8. Hardware Communication Interface 716
 - 9. Software Interface 716
 - 10. Data Flow 716
 - 11. Stand-Alone Operation 717
 - 12. Validation of the Components and the Integrated System 717
- V. Conclusions 718
- References 718
