

CONTENTS

CONTRIBUTORS	xi
VOLUMES IN SERIES	xiii
PREFACE	xvii
1. Digital Images and Computer Modeling by EDWARD J. GARBOCZI, DALE P. BENTZ, and NICOS S. MARTYS	
1.1. Introduction to Porous Materials and Digital Images	1
1.2. Geometrical and Topological Analysis	6
1.3. Computing Material Properties from Images	15
1.4. Creating Isotropic 3-D Structures from 2-D Images	26
1.5. Microstructure Models in Three Dimensions	28
References	36
2. Visualization of Flow Patterns in 2-D Model Networks by ROLAND LENORMAND	
2.1. Visualization Tools	43
2.2. Capillary Displacements	47
2.3. Tracer Dispersion	60
2.4. Three-phase Flow	61
2.5. Critical Flows	63
2.6. Flow in Fractured Media	65
2.7. Foam Flow in Porous Media	65
2.8. Conclusion	65
References	66

3. Probing Pore Structures by Sorption Isotherms and Mercury Porosimetry by YANIS C. YORTSOS	
3.1. Introduction	69
3.2. Background	71
3.3. Probing Pore Surfaces	80
3.4. Probing Porous Media	90
3.5. Conclusions	112
References	113
4. Conductivity, Permeability, and Electrokinetics by PO-ZEN WONG	
4.1. Introduction	119
4.2. Electrical Conductivity	122
4.3. Hydraulic Permeability	133
4.4. Electrokinetics	141
4.5. Multiphase Systems	150
References	155
5. Acoustics and Ultrasonics by PETER B. NAGY	
5.1. The Role of Acoustics in Characterizing Porous Media ...	161
5.2. Review of Acoustic Wave Propagation	163
5.3. Acoustic Wave Propagation in Fluid-Saturated Porous Materials	170
5.4. Summary	215
References	216

6. Small-Angle Scattering from Porous Materials by SUNIL K. SINHA	
6.1. Introduction	223
6.2. Experimental Methods	226
6.3. Scattering from Porous Media	230
6.4. Scattering from Fractal Systems	240
6.5. Small-Angle Scattering Studies of Fluids Confined in Porous Media	245
6.6. Conclusion	254
Appendix A	255
Appendix B	257
References	259
7. Light Scattering and Other Optical Methods by KENNETH H. LANGLEY and IWAO TERAOKA	
7.1. Introduction	263
7.2. Dynamic Light Scattering	265
7.3. Fluorescence Recovery after Photobleaching	276
7.4. Forced Rayleigh Scattering	284
7.5. Diffusing-Wave Spectroscopy	289
7.6. Other Optical Methods	293
References	297
8. X-Ray Imaging by MARY E. COLES	
8.1. Introduction	301
8.2. Nature and Attenuation of X Rays	302
8.3. X-Ray Profile Measurement	304

8.4. Digital Radiographic Imaging	305
8.5. Computed Tomography Imaging	305
8.6. X-Ray Imaging Techniques	309
8.7. Applications of X-Ray Imaging	316
8.8. Ultra-High-Resolution CT	329
8.9. Summary	332
References	332
9. Nuclear Magnetic Resonance by ROBERT L. KLEINBERG	
9.1. Introduction	337
9.2. NMR Relaxation	338
9.3. NMR Properties Peculiar to Porous Media	340
9.4. Pore Size Distribution	347
9.5. Determination of Surface Relaxivity	351
9.6. Multiexponential Decay Signal Processing	357
9.7. NMR Porosity	361
9.8. Materials Processing Applications	363
9.9. Petrophysical Applications	366
9.10. Instrumental Requirements	371
9.11. Inside-Out NMR	373
9.12. Conclusion	376
References	377
10. NMR Imaging of Fluids and Flow in Porous Media by C. T. PHILIP CHANG, A. TED WATSON, and CARL EDWARDS	
10.1. Introduction	387
10.2. Imaging in Porous Media	388

10.3. Applications	415
References	421
11. Acoustical and Electrical Methods for the Study of Fluid Mixing in Porous Media by JEAN-PIERRE HULIN and DOMINIQUE SALIN	
11.1. Static Mixing and Tracer Dispersion in Porous Media: An Introduction	425
11.2. Mechanisms of Miscible Mixing	430
11.3. Experimental Techniques for Studying Dispersion at Microscopic Scale	433
11.4. Experimental Techniques for Analyzing Dispersion in Large-Scale Heterogeneities	447
11.5. Experimental Analysis of Anomalous Dispersion and Finite Size Effects	455
11.6. Mapping of Miscible Fluid Flow with Viscosity and Density Contrasts	466
11.7. Discussion and Conclusions	470
References	472
INDEX	477
