Theory of Chaos Control

1	Controlling Chaos	1
1.1	Introduction	1
1.2	A One-Dimensional Example	2
1.3	Controlling Chaos in Two Dimensions	4
1.3.1	Stabilizing a Fixed Point	5
1.3.2	Stabilizing a Periodic Orbit of Higher Period	11
1.4	Pole placement method of controlling chaos in high dimensions . . .	13
1.5	Use of delay coordinates	16
1.6	Discussions	17

Theory of Chaos Control

2	Principles of Time Delayed Feedback Control	21
2.1	Introduction	21
2.2	Mechanism of delayed feedback control	22
2.3	Limits of the simple feedback method	27
2.4	Advanced control strategies	31
2.5	Influence of a delay mismatch	34
2.6	Summary	38
3	Control of Patterns and Spatiotemporal Chaos and its Applications	43
3.1	Introduction	43
3.2	Suppressing spatiotemporal chaos in CML systems	46
3.3	Pattern control in one-way coupled CML systems	57

3.4	Applications of pattern control and chaos synchronization in spatiotemporal systems	68
4	Control of Spatially Extended Chaotic Systems	87
4.1	Introduction	87
4.2	Control Parameters	89
4.2.1	Conditions for Control	89
4.2.2	Symmetry, Locality and Pinning Control	90
4.2.3	Periodic Array of Pinnings	92
4.3	Steady State Control	94
4.4	Control in the Presence of Noise	98
4.5	Control of Periodic Orbits	101
4.6	State Reconstruction	103
4.7	Density of Pinnings	107
4.7.1	Lattice Partitioning	107
4.7.2	State Feedback	108
4.7.3	Output Feedback	113
4.8	Summary	115
5	Topological Defects and Control of Spatio-Temporal Chaos	119
5.1	Introduction	119
5.2	Complex Ginzburg-Landau equation and its basic solutions	121
5.3	Stability of Basic Solutions	125
5.3.1	Stability of plane waves	125
5.3.2	Absolute versus Convective Instability of Traveling Waves	125
5.3.3	Stability of topological defects in one and two dimensions	126
5.4	Control of Chaos in the Complex Ginzburg-Landau Equation	129
5.4.1	One-dimensional situation. Control of the hole solution	129
5.4.2	Control of spiral in the two-dimensional complex complex Ginzburg-Landau Equation	132
5.5	Control of Spatio-Temporal Chaos in Reaction-Diffusion Systems	134
5.6	Conclusion	136
6	Targeting in Chaotic Dynamical Systems	141
6.1	Introduction	141
6.2	An Outline of Targeting Algorithms	142
6.3	The Tree-Targeting Algorithm	148
6.4	Results	150
6.5	Conclusions	154
7	Using Chaotic Sensitivity	157
7.1	Historical Setting	157
7.2	Targeting	159
7.2.1	Background	159
7.2.2	Using Chaotic Sensitivity	160

7.2.3	Implementations: Lorenz Attractor	160
7.2.4	Implementations: Higher Dimensionality	164
7.2.5	Time to Reach Target	165
7.2.6	Why Search for Intersections?	167
7.2.7	Effects of Noise and Modeling Errors	169
7.2.8	Experimental verification	170
7.3	Outlook	176
8	Controlling Transient Chaos on Chaotic Saddles	181
8.1	Introduction	181
8.2	Properties of chaotic saddles	182
8.3	The basic idea for controlling chaotic saddles	185
8.4	Comparison with controlling permanent chaos	187
8.5	Crossover around crises	188
8.6	Controlling motion on fractal basin boundaries	189
8.7	Controlling chaotic scattering	189
8.8	An improved control of chaotic saddles	191
8.9	Discussions	196
9	Periodic Orbit Theory for Classical Chaotic Systems	205
9.1	Introduction	205
9.2	Strange repellers and cycle expansions	206
9.3	Recycling measure of chaos	212
9.4	Periodic orbit-theory of deterministic diffusion	215
9.5	The inclusion of marginal fixed points	219
9.4	Conclusions	225

Application of Chaos Control

10	Synchronization in Chaotic Systems, Concepts and Applications	229
10.1	Introduction and Motivation	229
10.2	The Geometry of Synchronization	230
10.2.1	Simple Examples	230
10.2.2	Some Generalizations and a Definition of Identical Synchronization	231
10.3	The Dynamics of Synchronization	232
10.3.1	Stability and the Transverse Manifold	232
10.3.2	Synchronizing Chaotic Systems, Variations on Themes	235
10.4	Synchronous Circuits and Applications	239
10.5	Stability and Bifurcations of Synchronized, Mutually Coupled Chaotic Systems	245

10.5.1	Stability for Coupled, Chaotic Systems	245
10.5.2	Coupling Thresholds for Synchronized Chaos and Bursting .	247
10.5.3	Desynchronization Thresholds at Increased Coupling	249
10.5.4	Size Limits on Certain Chaotic Synchronized Arrays	251
10.5.5	Riddled Basins of Synchronization	252
10.6	Transformations, Synchronization, and Generalized Synchronization	255
10.6.1	Synchronizing with Functions of the Dynamical Variables . .	256
10.6.2	Hyperchaos Synchronization	257
10.6.3	Generalized Synchronization	259
11	Synchronization of Chaotic Systems	271
11.1	Introduction	271
11.2	Synchronization of identical systems	274
11.2.1	Constructing pairs of synchronizing systems	275
11.3	Transversal instabilities and noise	278
11.4	Sporadic driving	281
11.5	Spatially extended systems	284
11.6	Synchronization of nonidentical systems	286
11.6.1	Generalized synchronization I	286
11.6.2	Generalized synchronization II	289
11.6.3	Non-identical synchronization of identical systems	290
11.6.4	Phase synchronization	292
11.7	Applications and Conclusion	293
12	Phase Synchronization of Regular and Chaotic Oscillators	305
12.1	Introduction	305
12.2	Synchronization of periodic oscillations	306
12.3	Phase of a chaotic oscillator	309
12.3.1	Definition of the phase	309
12.3.2	Dynamics of the phase of chaotic oscillations	311
12.4	Phase synchronization by external force	312
12.4.1	Synchronization region	312
12.4.2	Statistical approach	313
12.4.3	Interpretation through embedded periodic orbits	314
12.5	Phase synchronization in coupled systems	318
12.5.1	Synchronization of two interacting oscillators	318
12.5.2	Synchronization in a Population of Globally Coupled Chaotic Oscillators	320
12.6	Lattice of chaotic oscillators	321
12.7	Synchronization of space-time chaos	322
12.8	Detecting synchronization in data	322
12.9	Conclusions	323

13 Tools for Detecting and Analyzing Generalized Synchronization of Chaos in Experiment	329
13.1 Introduction	329
13.2 Generalized Synchronization of Chaos	331
13.3 Weak and Strong Synchronization	332
13.3.1 Properties of the Synchronization Manifold	332
13.3.2 Numerical Examples	334
13.4 On-Off Intermittency	339
13.5 Time Series Analysis	344
13.5.1 Algorithm for Estimating CLEs	345
13.5.2 Examples	348
13.6 Experimental Examples	350
13.6.1 One-Way Coupled Double-Scroll Oscillators	350
13.6.2 Double-scroll Oscillator Driven with the Mackey-Glass System	357
13.7 Conclusions	359
14 Controlling Chaos in a Highdimensional Continuous Spatiotemporal Model	365
14.1 Introduction	365
14.2 El Niño's dynamics and chaos	366
14.2.1 El Niño's dynamics	367
14.2.2 El Niño's chaos	368
14.2.3 Model description	371
14.3 Choosing a control variable and a control point in space	373
14.4 A continuous delay-coordinates phase space approach to controlling chaos in high dimensional, spatiotemporal systems	375
14.5 Controllability of delay-coordinate phase space points along an unstable periodic orbit	377
14.6 Results	378
14.7 Using non-delay coordinates for phase space reconstruction	381
14.8 Conclusions	383
15 Controlling Production Lines	387
15.1 Introduction	387
15.2 TSS Production Lines and Their Model	389
15.3 Dynamics of TSS Lines	392
15.4 A Self-Organized Order Picking System for a Warehouse	399
15.5 Optimizing Performance	401
15.6 Concluding Remarks	401
16 Chaos Control in Biological Networks	405
16.1 Introduction	405
16.2 Control of a delay differential equation	406
16.3 Control of chaos in a network of oscillators	408
16.3.1 The model	408

16.4	Chaotic categorizer	411
16.4.1	Static pattern discrimination	415
16.4.2	Symbol recognition	415
16.4.3	Motion detection	416
16.5	Chaos control in biological neural networks	418
16.6	Control in Fourier space	421
16.7	Discussion	424
17	Chaos Control in Biological Systems	427
17.1	Introduction	427
17.2	Cardiac Dynamics	428
17.2.1	Introduction to ventricular fibrillation	428
17.2.2	Fibrillation as a dynamical state	428
17.2.3	Detection of deterministic dynamics in canine ventricular fibrillation	429
17.2.4	Imaging of the spatiotemporal evolution of ventricular fibrillation	431
17.3	Control of Chaos in Cardiac Systems	436
17.3.1	Control of isolated cardiac tissue	436
17.3.2	Control of atrial fibrillation in humans	441
17.4	Control of Chaos in Brain Tissue	448
17.5	DC Field Interactions with Mammalian Neuronal Tissue	448
17.6	Summary	453

Experimental Control of Chaos

18	Experimental Control of Chaos in Electronic Circuits	459
18.1	Introduction	459
18.2	The OPF Method	460
18.2.1	Circuit Implementation	464
18.2.2	Controlling the Diode Resonator	464
18.3	Controlling Coupled Diode Resonators	468
18.3.1	On Higher Dimensional Control	470
18.4	Controlling Spatiotemporal Chaos	473
18.4.1	Open Flow Systems	475
18.4.2	The Diode Resonator Open Flow System	476
18.4.3	Control	477
18.5	Conclusions	483

19 Controlling Laser Chaos	487
19.1 Introduction	487
19.2 Class B lasers	488
19.2.1 The single mode class B laser	488
19.2.2 Class B lasers with modulated parameters	490
19.2.3 CO ₂ laser with electronic feedback	491
19.2.4 Class B lasers with saturable absorber	491
19.2.5 Multimode class B lasers with intracavity second harmonic generation	492
19.2.6 Class B lasers in presence of feedback	493
19.3 Feedback methods of controlling chaos	493
19.3.1 Basic ingredients of chaos control	493
19.3.2 Experimental implementation of control	495
19.3.3 Delayed feedback control of chaos	499
19.4 Stabilization of unstable steady states	500
19.5 Nonfeedback control of chaos	503
19.5.1 Invasive vs noninvasive methods	503
19.5.2 Phase control	503
19.6 Applications of Controlling Laser Chaos	505
19.6.1 Enlargement of the range of cw operation	506
19.6.2 Floquet multipliers and manifold connections	506
19.7 Conclusion	508
20 Control of Chaos in Plasmas	513
20.1 Introduction	513
20.2 Some Basic Concepts	514
20.2.1 Overview over Common Chaos Control Schemes	514
20.2.2 Open-Loop Control	516
20.2.3 Closed-Loop Control	518
20.3 Plasma Diodes	523
20.3.1 The Pierce-Diode	524
20.3.2 The Thermionic-Diode	531
20.4 Ionization Waves	539
20.4.1 Basic Theory	539
20.4.2 Experiment and Transition to Chaos	541
20.4.3 Control of Ionization Wave Chaos	543
20.5 Taming Turbulence	550
20.6 Summary and outlook	554
21 Chaos Control in Spin Systems	563
21.1 Introduction	563
21.2 Ferromagnetic Resonance in Spin-Wave Instabilities	565
21.2.1 Experimental Set-Up	565
21.2.2 Observed Phenomena	566
21.2.3 Routes to Chaos	567

21.3	Nonresonant Parametric Modulation	569
21.3.1	Analytical and Numerical Approach	569
21.3.2	Experimental Suppression of Spin-Wave Chaos	571
21.4	Occasional Proportional Feedback	574
21.4.1	The OGY Concept	574
21.4.2	Experimental Control by an Analog Feedback Device	576
21.5	Time-Delayed Feedback Control	578
21.5.1	Principles of Control	578
21.5.2	Application to Spin-Wave Chaos	583
21.6	Conclusions	585
22	Control of Chemical Waves in Excitable Media by External Per-	
	turbation	591
22.1	Introduction	591
22.2	Spiral Waves and the Belousov-Zhabotinsky Reaction	592
22.3	External Control	596
22.3.1	Chemical Parameters and Oxygen-Inhibition	596
22.3.2	Control by Electric Fields	598
22.3.3	Control by Light	603
22.4	Conclusions	610
23	Predictability and Local Control of Low-dimensional chaos	615
23.1	Introduction	615
23.2	A definition of predictability	616
23.3	Effective Lyapunov exponents	618
23.4	Unstable periodic orbits	623
23.5	The origin of predictability contours	624
23.6	Chaos control in the presence of large effective Lyapunov exponents	629
23.6.1	The local entropy algorithm	630
23.6.1	Experimental results	631
23.7	Adaptive orbit correction in chaos control	634
23.7.1	Orbit corrections in the Hénon map	635
23.7.2	Orbit corrections in a changing environment	636
23.7.3	Experimental orbit correction at the driven pendulum	637
23.7.4	Interaction of prediction and control, outlook	638
24	Experimental Control of Highly Unstable Systems Using Time	
	Delay Coordinates	645
24.1	Introduction	645
24.2	The OGY control scheme	648
24.3	Extensions of the OGY-control method	649
24.3.1	Quasicontinuous control for highly unstable systems	649
24.3.2	The OGY control method for time delay coordinates	652
24.4	Quasicontinuous control using time delay coordinates	654
24.4.1	Local dynamics in the time delay embedding system	654

24.4.2 Quasicontinuous control formula for time delay coordinates . 656

24.5 The bronze ribbon - Experimental setup 659

24.6 Control vectors from scalar measurements 662

24.6.1 Unstable periodic orbits from recurrent points 663

24.6.2 Linear dynamics of the unperturbed system 663

24.6.3 Dependence on the control parameter 668

24.6.4 The adaptive orbit correction 669

24.7 Control experiments - The bronze ribbon 672

24.7.1 Quasicontinuous control of the bronze ribbon with time delay
coordinates 672

24.7.2 Tracking of the bronze ribbon experiment 675

24.7 Summary and Conclusions 680
