Preface	ix
1 Direct nonlinear instabilities	1
1.1 Parametric decay instability	1
1.2 Decay instabilities in media with wave-modulated phase velocity; qualitative theory and principal features of PDI	2
1.3 PDI of magnetohydrodynamic waves (quantitative theory)	7
1.4 Modulation instability	14
1.5 Explosive instability of negative-energy waves	15
2 Induced instabilities, the symmetry and the evolution of non-equilibrium systems	20
2.1 Systems with multiparametric non-equilibrium	20
2.2 Group methods of analyzing secondary quasi-stationary states	22
2.2.1 Introduction	22
2.2.2 Scaling transformation group	23
2.2.3 Supersymmetry group	26
2.3 Effective collision frequencies in turbulent media	30
2.4 Induced drift instabilities	32
3 External noise and stability of plasmas	36
3.1 Introduction	36
3.2 Fluctuational chaos	38
3.3 Universal noise-induced plasma instability and accelerated fluctuational dynamics in the vicinity of a point of instability	41
3.4 Anomalous diffusion of particles	51
3.5 Fluctuations of transfer coefficients in the plasma and in hydrodynamics	54
4 Non-standard evolution of turbulent media	57
4.1 Introduction	57
4.2 Drift instability cascade and energy transfer in ionospheric turbulence	58
4.3 Wave-turbulent instability	67

5	The helical mechanism of large-scale structure generation in continuous media	83
5.1	Introduction	83
5.2	Helical structures and helical mechanisms of generation in hydrodynamics	84
5.2.1	On the role of helicity, on the similarity and differences between the magnetic and vortex dynamo in turbulent media	84
5.2.2	Generation of large-scale helical vortices in convective media	87
5.2.3	Helical mechanism of generation of large-scale structures in non-convective hydrodynamic media	90
5.3	Hydrodynamic α -effect in compressible media	93
5.3.1	Introduction	93
5.3.2	Qualitative discussion	94
5.3.3	Closure of averaged equation	98
5.3.4	α as a function of compressibility coefficient: limiting cases	100
5.3.5	Large-scale instability	102
5.3.6	Discussion	103
5.4	Large-scale vortical instability and convection: further progress	105
5.4.1	Equation of vortical instability due to convective turbulence and Coriolis force	105
5.4.2	Rayleigh–Bénar convection in turbulent fluid at very large Reynolds numbers	112
5.5	Reverse energy cascade in uniform turbulent shear flow	117
5.5.1	Introduction	117
5.5.2	Formulation of the problem. Basic equations. Homogeneous helical anisotropic flow	118
5.5.3	Closing the equations for perturbations of turbulent shear flow in the second-order correlation approximation	120
5.5.4	Interval instability of turbulent Couette flow	124
5.6	Helicity as a possible physical mechanism for the amplification of typhoon-type vortical perturbations in the atmosphere and of the modulation of rotation frequency of the Earth	129
5.6.1	Introductory remarks	129
5.6.2	Qualitative analysis of the role played by helicity in typhoon generation	130
5.6.3	On typhoon precursors	134
5.6.4	On the mechanism of modulation of the number of strong earthquakes and of the Earth's rotation frequency	136

6	The importance and prospects of further research into nonlinear instabilities in helicoidal media (concluding remarks)	144
6.1	Two-dimensional or helical turbulence?	144
6.2	Vortical processes in the Jovian atmosphere induced by the collision with the Shoemaker–Levy 9 comet	147
6.3	Some yet unsolved problems	156
	Index	161
