Preface	xi
1. Introduction	
<i>by Charles P. Poole, Jr.</i>	1
A. Introduction	1
B. Definition of a Superconductor	2
C. Form and Content of Handbook	3
D. Several Miscellaneous Tables	3
E. Glossary of Terms	11
References	27
2. Properties of the Normal Metallic State	
<i>by Charles P. Poole, Jr.</i>	29
A. Introduction	29
B. Conduction Electron Transport	30
C. Frequency Dependent Electrical Conductivity	33
D. Brillouin Zones	34
E. Fermi Surface	36
F. Electromagnetic Fields	39
References	40
3. Superconducting State	
<i>by Charles P. Poole, Jr.</i>	43
A. Introduction	43
B. Persistant Current and Surface Resistance	44
C. Fields inside Superconductor	45
D. Temperature Dependencies	47
E. Critical Magnetic Field Slope	51
References	52

4. Models and Theories

<i>by Charles P. Poole, Jr.</i>	53
A. Introduction	53
B. London Equations	54
C. Ginzburg–Landau Theory	55
D. Bardeen–Cooper–Schrieffer Theory	58
E. Mechanisms for Cooper Pairing	60
F. Critical State Models	61
G. Bean Model	62
H. Reversed Critical States and Hysteresis	64
I. Hubbard Models and Band Structure	66
References	69

5. Superconductor Types

<i>by Charles P. Poole, Jr., Paul C. Canfield, and Arthur P. Ramirez</i>	71
A. Introduction	72
B. Elements and Alloys	72
C. Description of Data Tables	79
D. Classical Compounds	80
E. Perovskites	85
F. Heavy Electron Systems	87
G. Borocarbides	92
H. Fullerenes	96
I. Charge Transfer Organics	105
J. Crystal Chemistry	107
References	108

6. Crystal Structures of Classical Superconductors

<i>by Roman Gladyshevskii and Karin Cenzual</i>	109
A. Introduction	110
B. Elements	120
C. Intermetallic Compounds	126
D. Interstitial Carbides, Nitrides, Oxides, and Hydrides	142
E. Borides, Carbides, and Borocarbides with Nonmetal Polymers	146
F. Chalcogenides	157
G. Heavy-Electron Compounds	164
H. Organic Compounds	165
I. Crystallographic Data Sets	170
J. Tabulated Data	173
References	236

7. Cuprates

<i>by Charles P. Poole, Jr. and Frank J. Owens</i>	251
A. Introduction	251

B.	Multislab Structure	252
C.	Aligned and Body-Centered Types	257
D.	Role of the Binding Slab	262
E.	Particular Cuprate Superconductors	262
F.	Infinite-Layer and Related Phases	265
	References	265
8.	Crystal Structures of High-T_c Superconducting Cuprates	
	<i>by Roman Gladyshevskii and Philippe Galez</i>	267
A.	Introduction	268
B.	Perovskite-Type Structures	269
C.	Atom Layers and Stacking Rules	271
D.	High- T_c Superconductor Family Tree	278
E.	Symmetry	285
F.	Ideal and Real Cation Coordinations	293
G.	Chemical Families	297
H.	Crystallographic Data Sets	305
I.	Conclusions	413
	Acknowledgement	413
	References	413
9.	Characteristic Parameters	
	<i>by Charles P. Poole, Jr., John F. Zasadzinski, Roberta K. Zasadzinski, and Philip B. Allen</i>	433
A.	Introduction	434
B.	Relationships Between Parameters	434
C.	Coherence Lengths and Penetration Depths	438
D.	Superconducting Gap Parameters	445
E.	Critical Magnetic Fields	448
F.	Critical Currents	473
G.	Electron–Phonon Coupling Constants	478
10.	Thermal Properties	
	<i>by Ctirad Uher, Charles P. Poole, Jr., and Alan B. Kaiser</i>	491
A.	Introduction	492
B.	Specific Heat	492
C.	Thermal Conductivity	497
D.	Thermoelectric and Thermomagnetic Effects	510
11.	Electrical Properties	
	<i>by Charles P. Poole, Jr.</i>	535
A.	Introduction	535
B.	Hall Effect	536

C.	Tunneling	537
D.	Josephson Effect	541
E.	Magnetic Field and Size Effects	544
F.	Superconducting QUantum Interference Device (SQUID)	545
	References.....	546
12.	Magnetic Properties	
	<i>by Charles P. Poole, Jr.</i>	547
A.	Introduction.....	547
B.	Internal Fields and Magnetization	548
C.	Critical Fields	550
D.	Vortices	553
E.	Vortex Anisotropies	554
F.	Individual Vortex Motion	556
G.	Transport Current in a Magnetic Field	559
H.	Magnetic Phase Diagram	560
I.	Ellipsoids in Magnetic Fields.....	561
J.	Intermediate State of Type I Superconductor	562
K.	Ac Susceptibility.....	566
	References.....	567
13.	Mechanical Properties	
	<i>by Ronald G. Munro.</i>	569
A.	Introduction.....	570
B.	Elastic Properties	570
C.	Strength	576
D.	Hardness	601
E.	Toughness	610
F.	Conclusion	614
	Acknowledgement.....	619
	References.....	619
14.	Phase Diagrams	
	<i>by Winnie Wong-Ng</i>	625
A.	Introduction.....	626
B.	General Discussion and Scope	627
C.	Experimental Methods	631
D.	Representative Phase Diagrams	634
E.	Summary and Future Need.....	677
	References.....	683
